

Supporting information

for the article “Oxidation, defunctionalization and catalyst life cycle of carbon nanotubes: Raman spectroscopy view” by Sergei A. Chernyak, Anthon S. Ivanov, Konstantin I. Maslakov, Alexander V. Egorov, Zexiang Shen, Serguei S. Savilov, Valery V. Lunin

S-1. TGA data for pristine CNTs and those oxidized in nitric acid for 12 h

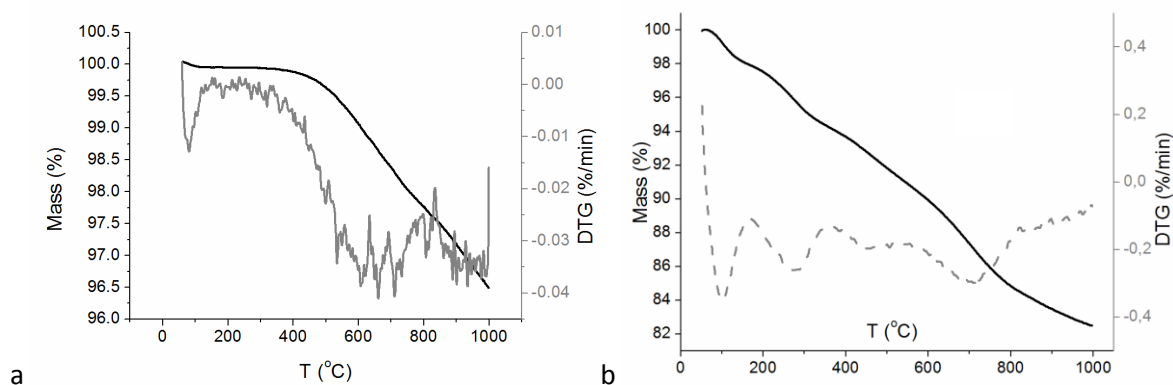

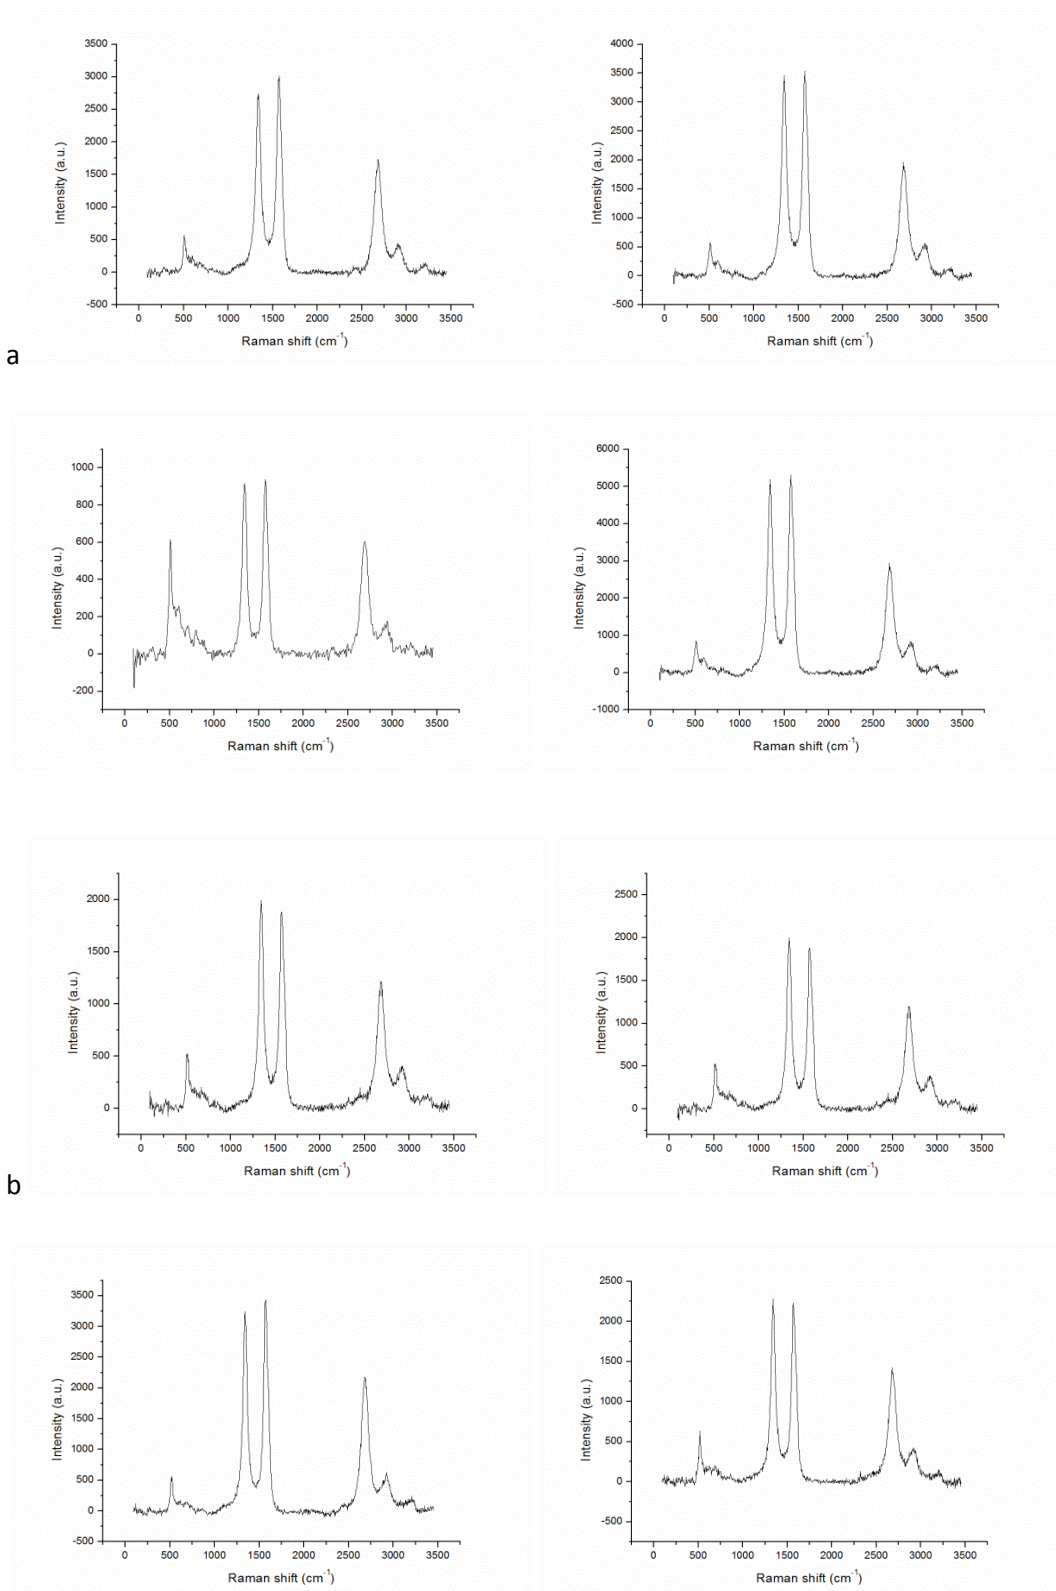

Figure S-1. a – TG and DTG curves for CNTp obtained in air flow at heating rate of 10°/min ; b – TG and DTG curves for CNT12 obtained in Ar flow at heating rate of 10°/min

S-2. Raman spectra

C

d

e

f

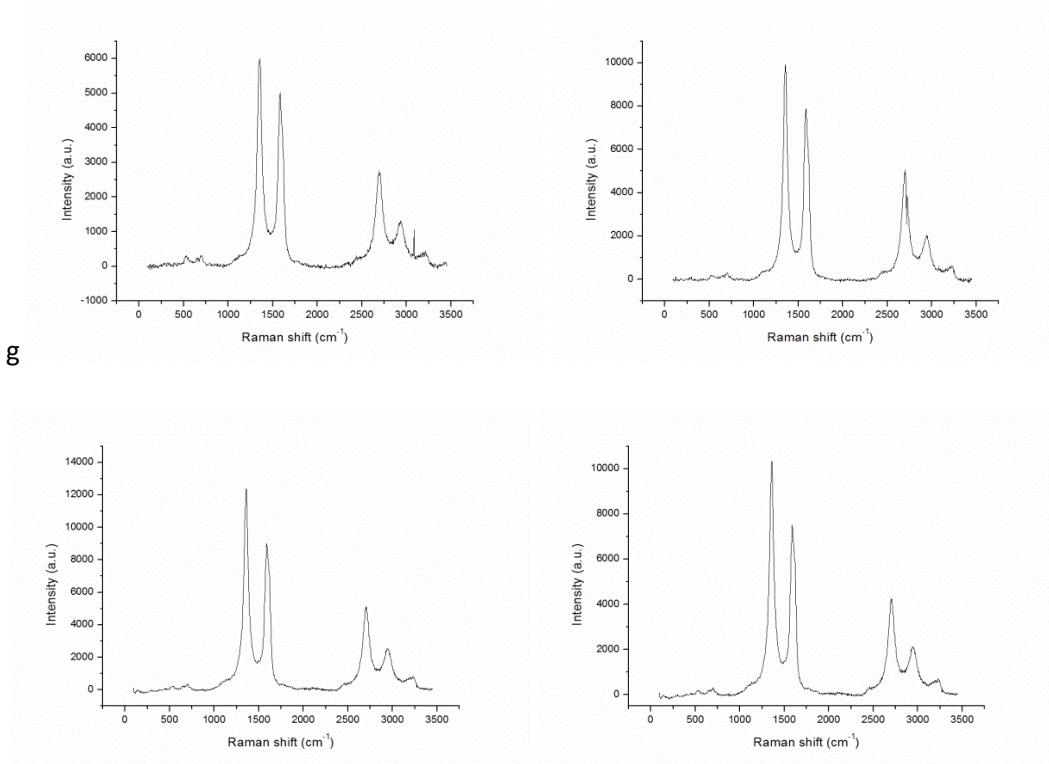

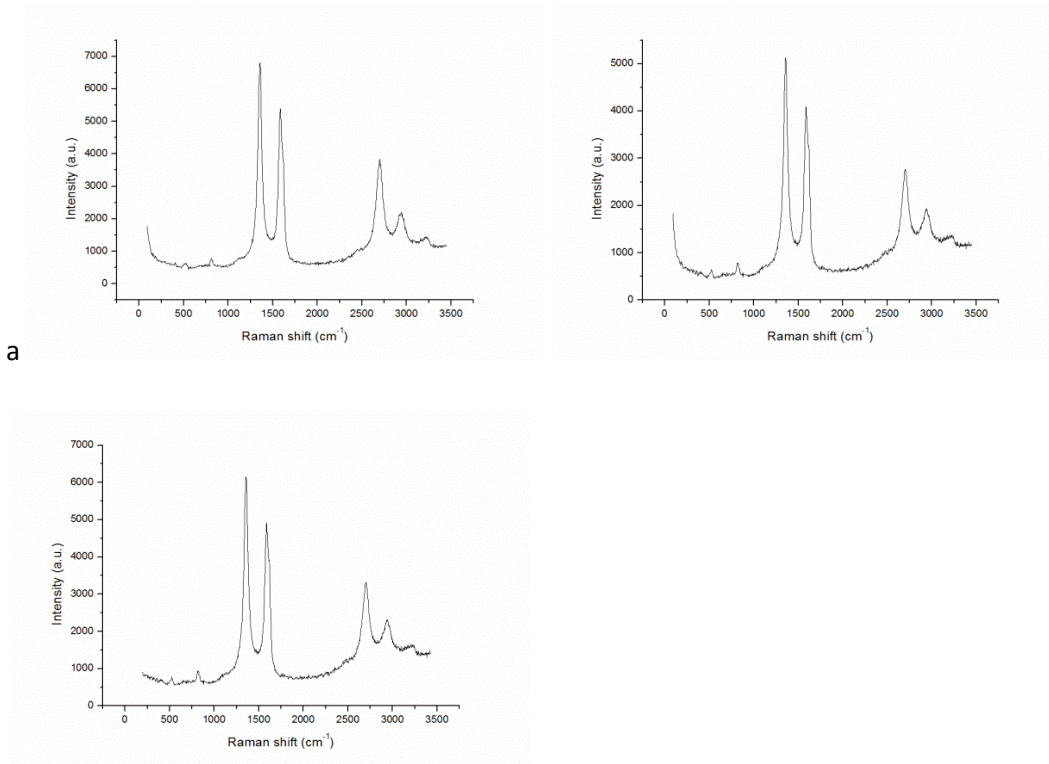

Figure S-2.1. Raman spectra of the samples: a – CNTp, b – CNT1, c – CNT3, d – CNT6, e – CNT9, f – CNT12, g – CNT15.

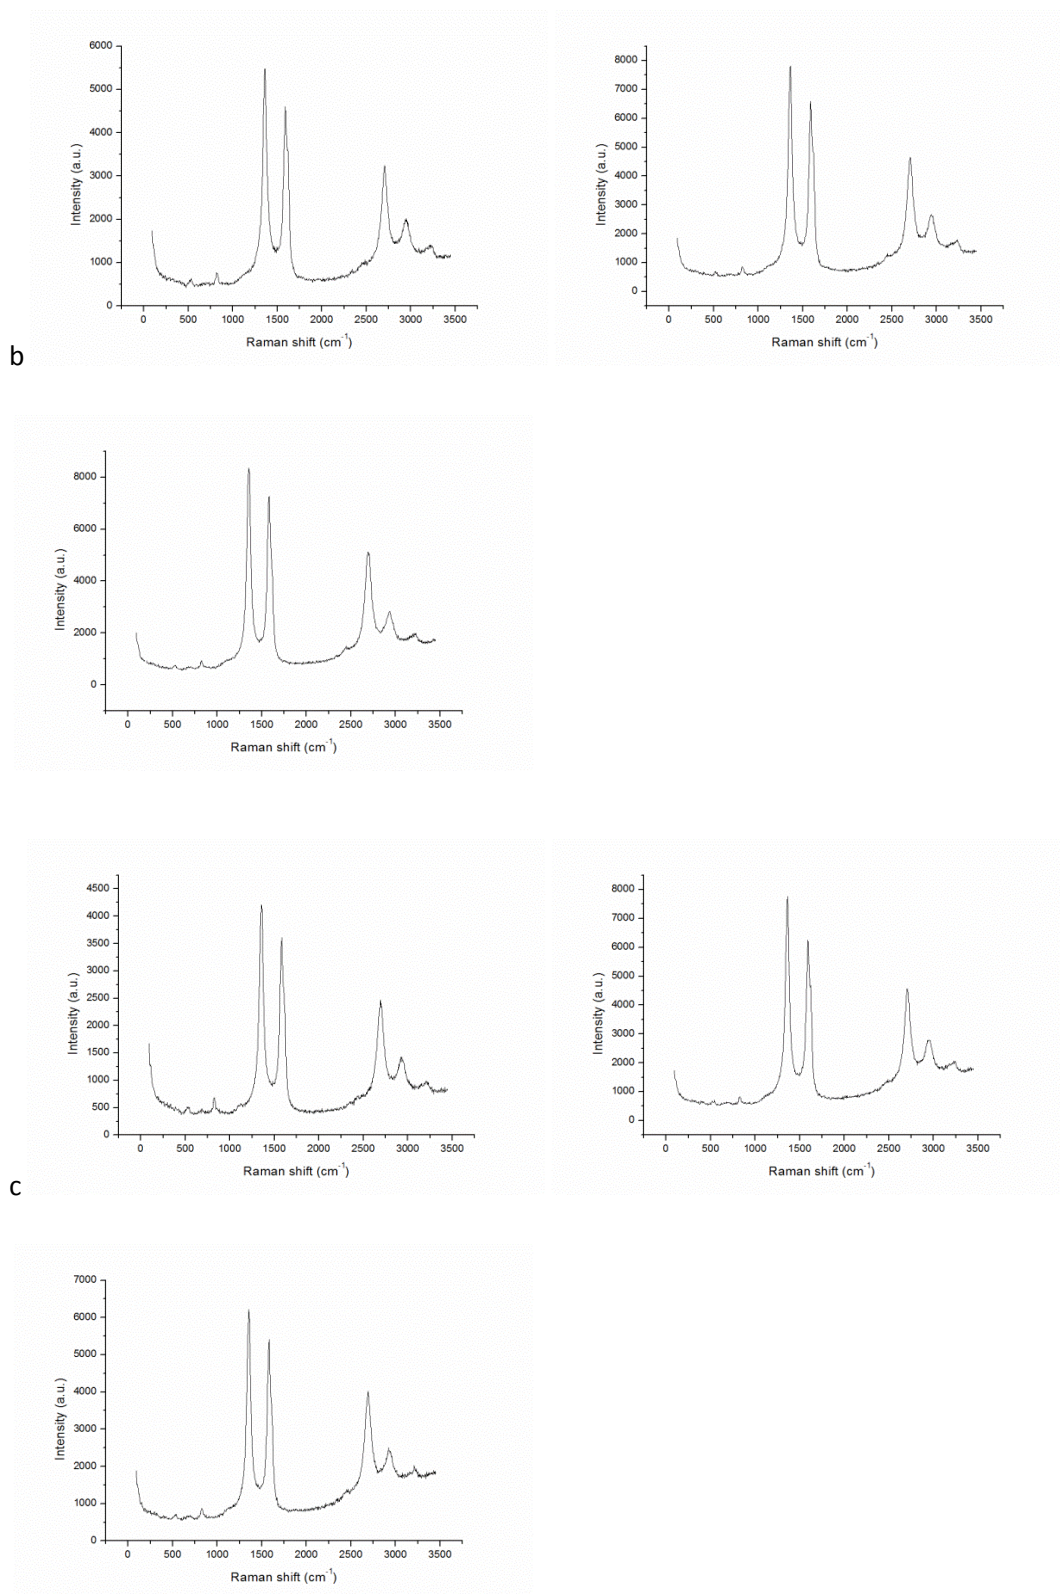

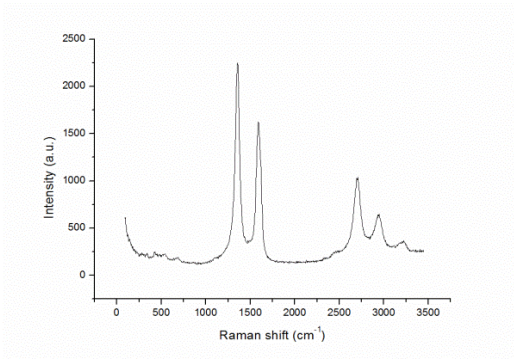

Figure S-2.2. Raman spectra of the annealed CNT samples. Annealing temperature: a – 160, b – 370, c – 530.

a

b

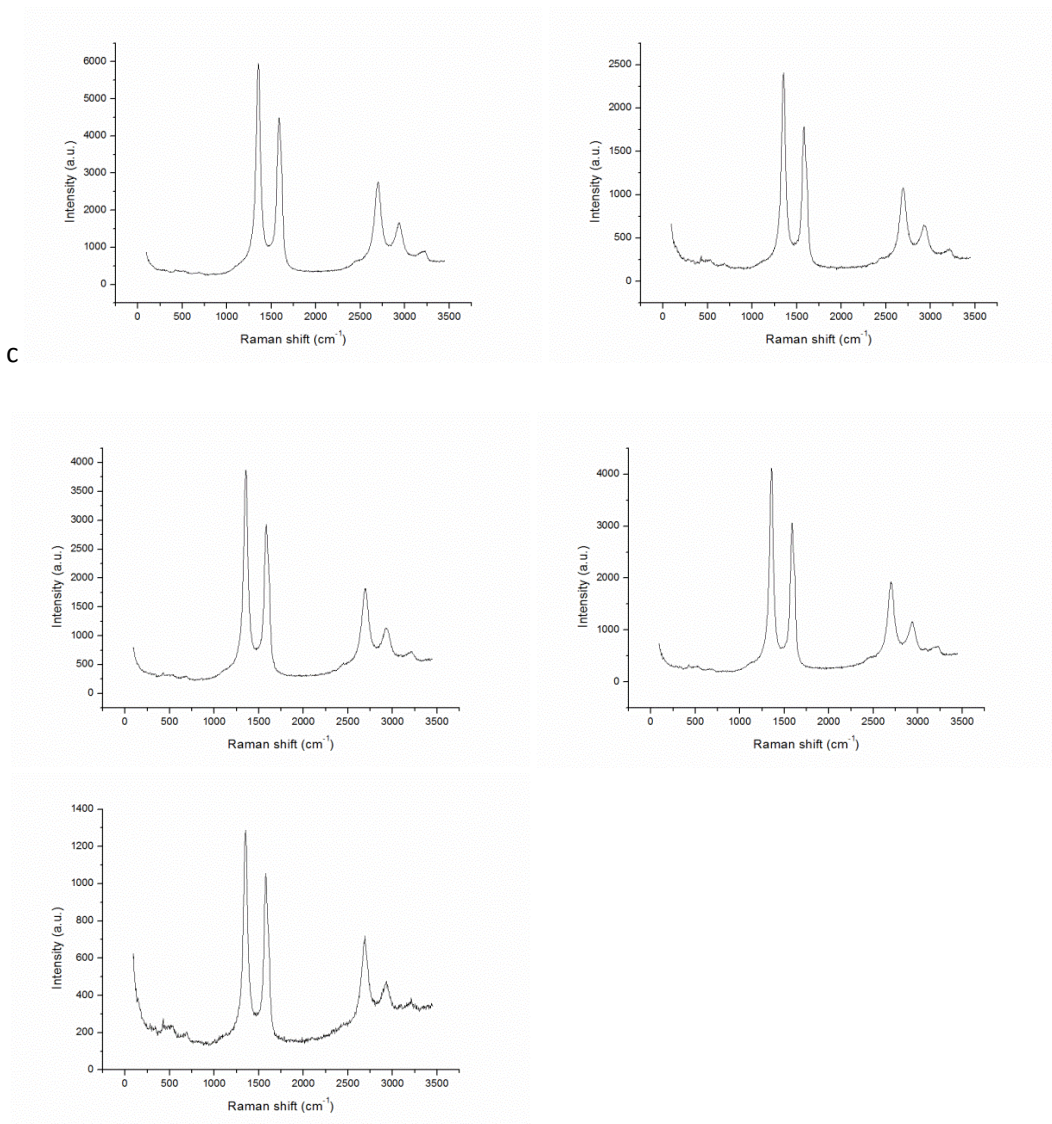

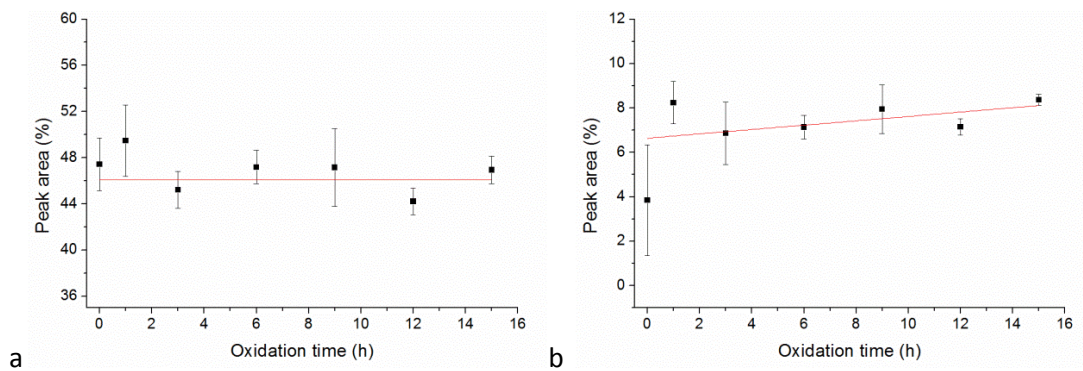

Figure S-2.3. Raman spectra of the samples: a – N2-CNT, b – H2-CNT, c – FTS-CNT.

S-3. Effect of the oxidation time on the relative areas of D bands and G band

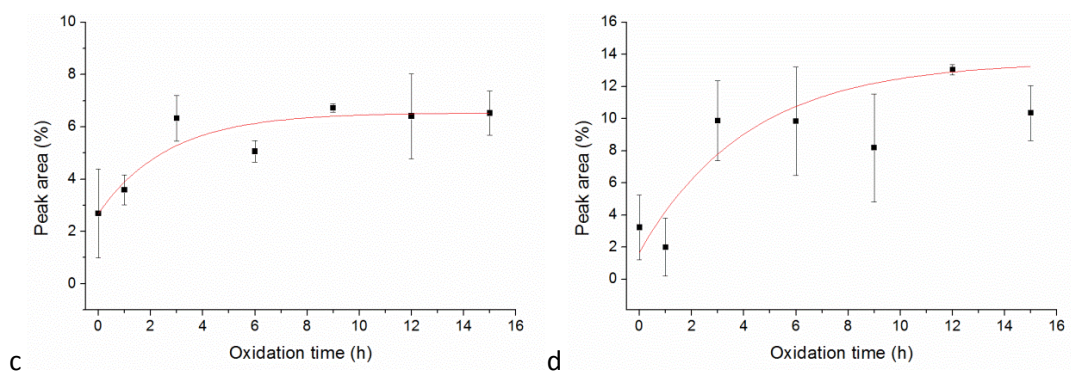

Figure S-3 Relative areas of D1 (a), D2 (b), D3 (c), and D4 (d) bands in Raman spectra of oxidized CNTs in percentage of total area under 900–1800 cm^{-1} region.

The equations used for curve fitting and obtained best-fit parameters:

D1: $y = y_0, y_0 = 46.1$

D2: $y = A + B \cdot x, A = 6.6 B = 0.1$

D3: $y = A_1 \cdot \exp(x/t_1) + A_2 \cdot \exp(x/t_2) + A_3 \cdot \exp(x/t_3) + y_0, y_0 = 6.5 A_1 = -1.3 t_1 = -2.7 A_2 = -1.3 t_2 = -2.7 A_3 = -1.3 t_3 = -2.7$

D4: $y = y_0 + A \cdot \exp(k \cdot x), y_0 = 13.6 A = -11.9 k = -0.2$

G: $y = A_1 \cdot \exp(x/t_1) + A_2 \cdot \exp(x/t_2) + y_0, y_0 = -351503 A_1 = 12.8 t_1 = 1.2 A_2 = 351535 t_2 = 1.7$

S-4. BET and XPS data

Table S-4. BET specific surface area and XPS oxygen content in pristine and oxidized CNTs.

Oxidation time (h)	S_{BET} (m^2/g)	O_{XPS} (at.%)
0	192 ₅	0.3
1	225 ₅	6.5
3	233 ₅	8.0
6	237 ₅	8.6
9	249 ₅	8.9
12	246 ₅	8.7

S-5. TEM study of CNTs

Average CNT diameter and its distribution were calculated from TEM images. At least 100 nanotubes were processed.

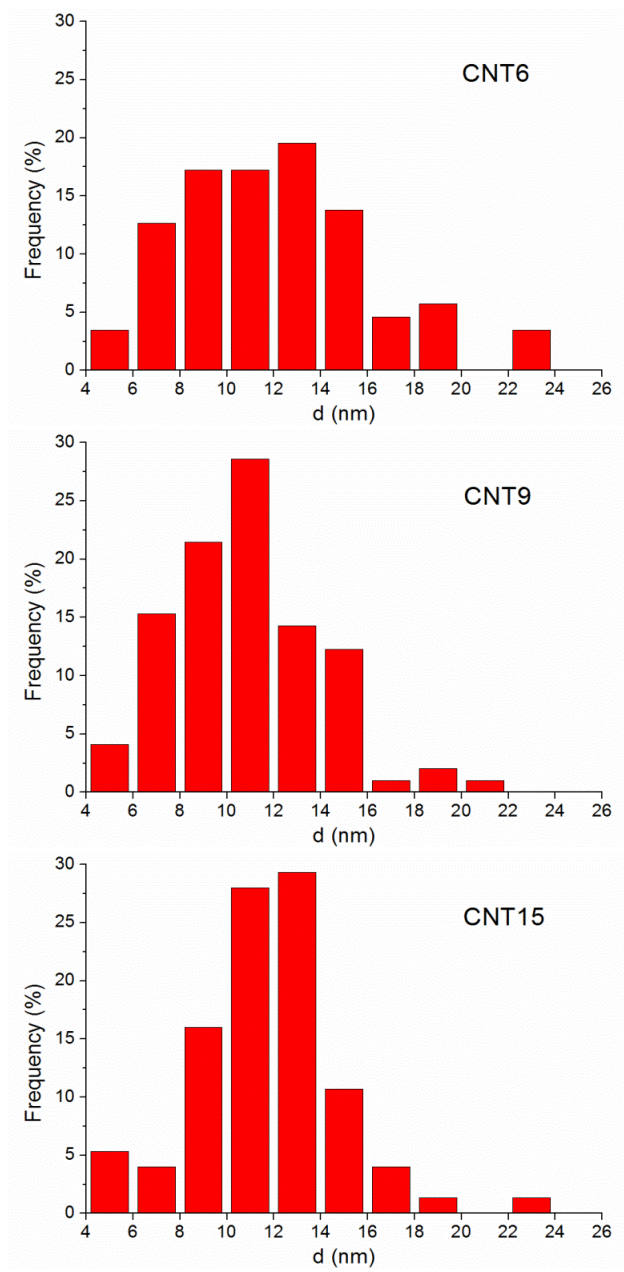

Figure S-5.1. CNT diameter distribution after different time of oxidation

Figure S-5.2. TEM images used for the calculation of CNT diameters. Images are from Co based catalyst supported on appropriate nanotubes: a – CNTp, b – CNT1, c – CNT3, d – CNT6, e – CNT9, f – CNT12, g – CNT15.

Figure S-5.3. Average diameter of CNTs and its standard deviation against the oxidation time

S-6. Effect of the oxidation time on the intensity ratios of D bands to G band.

The equations used for curve fitting and obtained best-fit parameters:

$$I_{D1}/I_G: y = y_0 + A \cdot \exp(x/t), y_0 = 1.7 \quad A = -0.3 \quad t = -4.1$$

$$I_{D2}/I_G: y = a + b \cdot x + c \cdot r^x, a = 0.33 \quad b = 0.01 \quad c = -0.15 \quad r = 0.07$$

$$I_{D3}/I_G : y = y_0 + A \cdot \exp(x/t), y_0 = 0.07 \quad A = -0.04 \quad t = -1.3$$

$$I_{D4}/I_G : y = y_0 + A \cdot \exp(x/t), y_0 = 0.06 \quad A = -0.05 \quad t = -4.0$$

S-7. Disordered bands to G band intensity ratios in CNT12 annealed at different temperatures

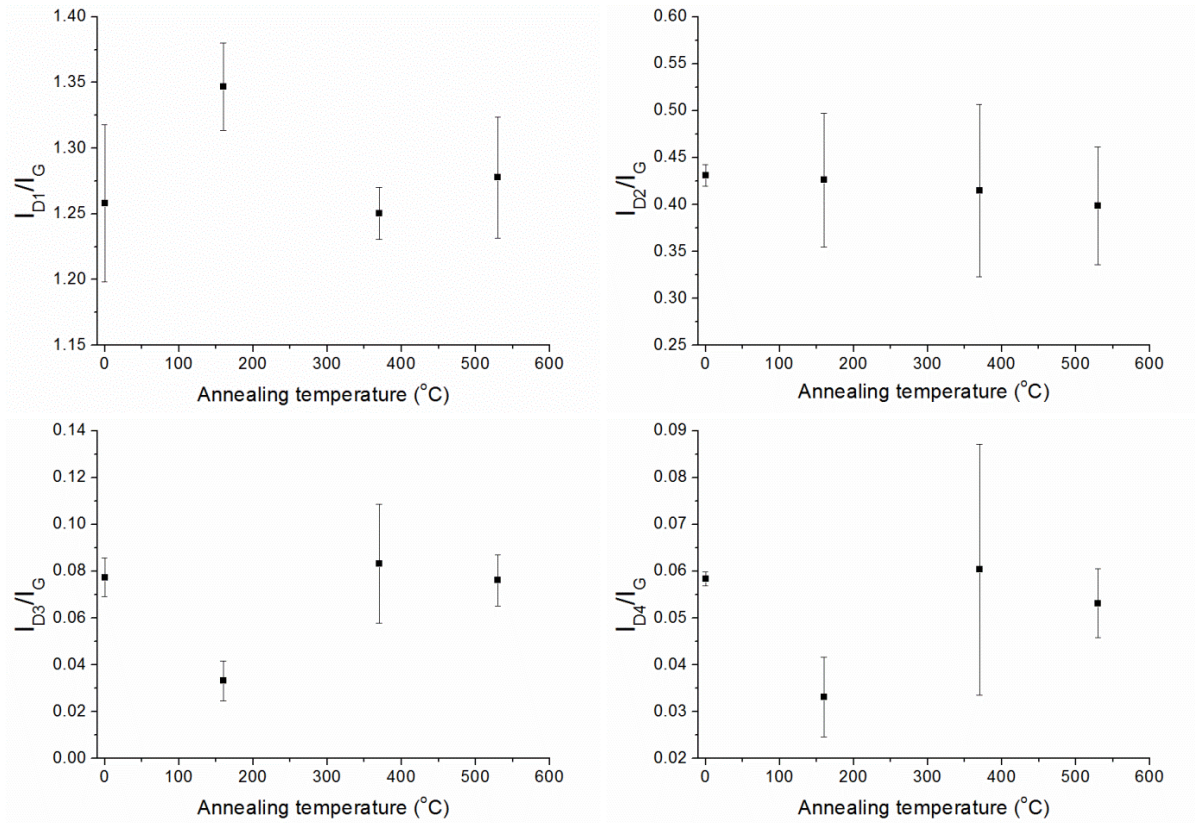

Figure S-7. Disordered bands to G band intensity ratios in CNT12 annealed at different temperatures
