Experimental Section

Synthesis of WO₂(dpm)₂ (11a): Complex **11a** was obtained as a side product when reacting [WO(OCH₂C(CH₃)₃)₄]₂ (**19**, 0.910 mmol, 1.00 g) and more than 8 equiv Hdpm (8.00 mmol, 1.82 mL, 1.61 g) in THF. The mixture was refluxed for a total of 48 h. The pale yellow waxy residue obtained after removal of volatiles was characterized by NMR to consist of a mixture of **11** and **11a** (Figure S26). ¹H NMR of **11a** (C₆D₆, 25 °C): δ 5.93 (s, 2H, COCHCO), 1.07 (s, 18H, C(CH₃)₃), 0.95 (s, 18H, C(CH₃)₃). ¹³C{¹H} NMR of **11a** (C₆D₆, 25 °C): δ 205.43 (OC), 194.52 (OC), 95.43 (COCHCO), 41.50 (C(CH₃)₃), 40.31 (C(CH₃)₃), 27.52 ((CH₃)₃C), 27.07 ((CH₃)₃C). A single crystal selected for X-ray crystallographic study from a sample crystallized in toluene was representative of **11a** (Figure S28). Crystal data and structure refinement for **11a** are shown in Table S3.

Crystallographic Structure Determination of 11a. X-ray intensity data for **11a** were collected at 100 K on a Bruker **DUO** diffractometer using MoK α radiation ($\lambda = 0.71073$ Å) and an APEXII CCD area detector. Raw data frames were read by the program SAINT¹ and integrated using 3D profiling algorithms. The resulting data were reduced to produce hkl reflections and their intensities and estimated standard deviations. The data were corrected for Lorentz and polarization effects and numerical absorption corrections were applied based on indexed and measured faces. The structure was solved and refined in SHELXTL2013,¹ using full-matrix least-squares refinement. The non-H atoms were refined with anisotropic thermal parameters and all of the H atoms were calculated in idealized positions and refined riding on their parent atoms. The asymmetric unit consists of two chemically equivalent but crystallographically independent molecules, and a half pentane solvent molecule (located on an inversion symmetry element). Each molecule has the C19 t-butyl groups disordered and refined in two parts. Check for higher symmetry or a smaller unit cell did not provide any viable options, thus the use of the current space group and unit cell. In the final cycle of refinement, 11486 reflections (of which 8128 are observed with $I > 2\sigma(I)$) were used to refine 569 parameters and the resulting R_1 , wR_2 and S (goodness of fit) were 3.27%, 7.05% and 0.946, respectively. The refinement was carried out by minimizing the wR_2 function using F^2 rather than F values. R_1 is calculated to provide a reference to the conventional R value but its function is not minimized.
