**Fig. S21** ESR spectrum of complex **6** in  $CH_2Cl_2$  upon oxidation: top - 295 K, 0.005 M: g = 2.159,  $\Delta H = 36$  G,  $a_{105Pd} = 10$  G,  $\Delta H = 31$  G; left bottom - 295 K, 0.1 M:  $g_{\parallel} = 2.17$ ,  $\Delta H = 50$  G;  $g_{\parallel} = 2.15$ ,  $\Delta H = 60$  G; right bottom - 135 K, 0.1 M: sim1:  $g_1 = 2.21$ ,  $\Delta H = 40$  G;  $g_2 = 2.19$ ,  $\Delta H = 50$  G;  $g_3 = 2.03$ ,  $\Delta H = 35$  G; sim2: g = 2.14,  $\Delta H = 40$  G.

#### Quantum chemical calculations details

Using complex **3** as an example we investigated the influence of geometry parameters on the result of energy characteristics estimation: geometry parameters were optimized at the B3LYP/TZP-DKH level. In this case HOMO is appear to be stabilized by 0.365 eV while LUMO energy increases by 0.205 eV. This leads to noticeable increase in the energy gap value by 0.239 eV compared to one obtained with X-ray geometry. In [1,2] example compounds consisting of the 1<sup>st</sup> and 2<sup>nd</sup> rows elements (database IP131 [3]) illustrate the long-range corrected functionals describe the frontier orbitals energy and the energy gap value better than B3LYP. Hereat we examined the influence of the functional on the energy characteristics. In the case of cyclopalladated complexes no enhancement of  $E_{\text{HOMO}}$  and  $\Delta E_{(\text{HOMO-LUMO})}$  values were obtained: CAM-B3LYP-based calculations afford significant stabilization of HOMO (by ~ 1.5 eV regardless to the geometry used) and severe increase of LUMO energy resulted in increase of  $\Delta E_{(\text{HOMO-LUMO})}$  by ~ 2.7 eV in comparison to values obtained at B3LYP level. Using the  $\omega$ B97X-D functional makes these shifts even more noticeable: stabilization of LUMO achieves ~ 2.1 eV and  $\Delta E_{(\text{HOMO-LUMO})}$  increases by 3.3-3.8 eV. Thuswise, in the present work we discuss the results obtained at B3LYP/TZP-DKH level.

	B3LYP		CAM-B3LYP		<b>ωB97X-D</b>	
	X-Ray geo	Opt B3LYP	X-Ray geo	Opt B3LYP	X-Ray geo	Opt B3LYP
НОМО	-5.390	-5.755	-6.937	-7.322	-7.459	-7.85
