Purification of indium by solvent extraction with undiluted ionic liquids

Clio Deferm, Michiel Van de Voorde, Jan Luyten, Harald Oosterhof, Jan Fransaer and Koen Binnemans*

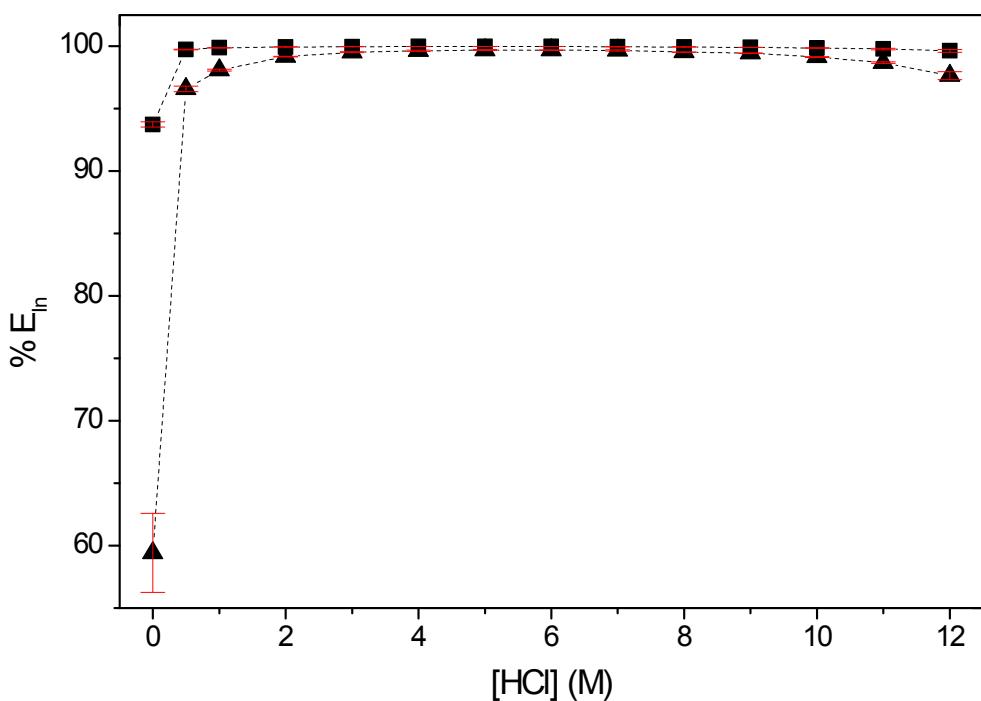

Fig. S1 Percentages extraction of indium(III) ($\%E_{In}$) as a function of the HCl concentration for the HCl–Cyphos® IL 101 (○) and HCl–Aliquat® 336 (□) system at 60 °C. The volume ratio of the aqueous to the organic phase is 1:1. Aqueous phase: Initial indium(III) concentration 5 g L⁻¹.

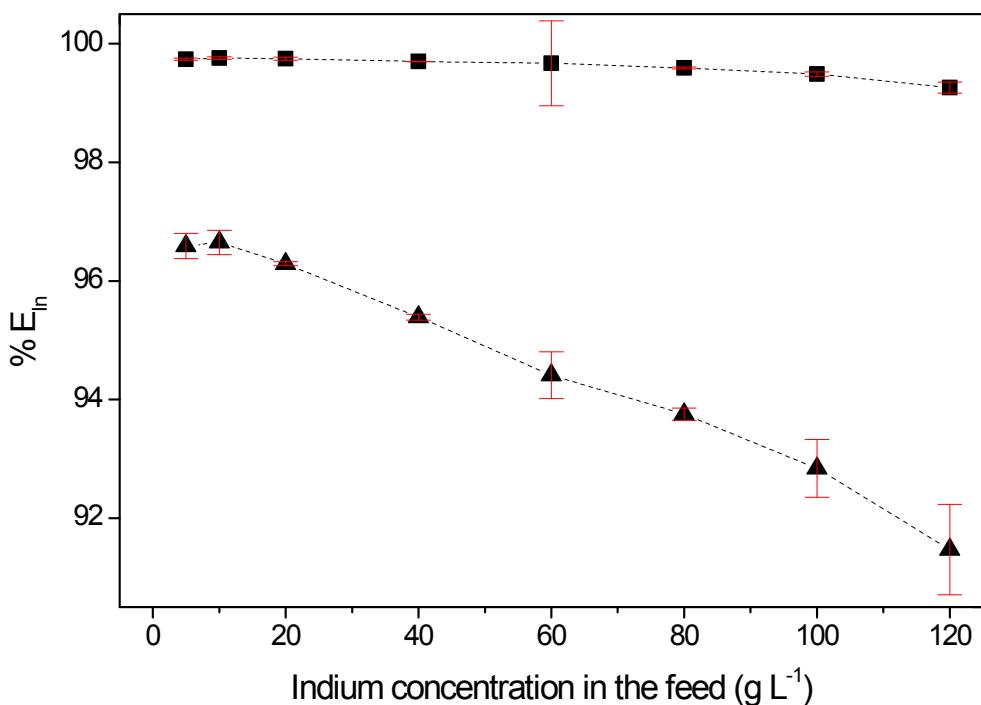

Fig. S2 Percentage extraction of indium(III) ($\%E_{In}$) as a function of the indium(III) concentration in the aqueous feed solution for the HCl–Cyphos® IL 101 (○) and HCl–Aliquat® 336 (□) system at 60 °C. The volume ratio of the aqueous to the organic phase is 1:1. Aqueous phase: Initial HCl concentration 0.5 M.

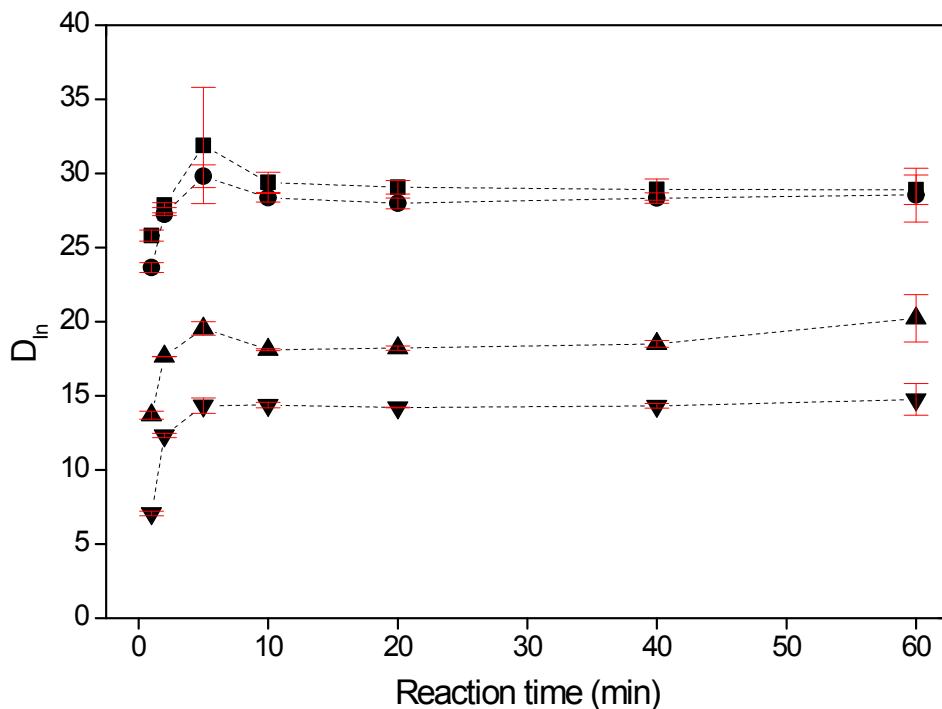

Fig. S3 Distribution ratios of indium(III) (D_{In}) as a function of the reaction time for various indium(III) concentration in the aqueous feed solution at 60 °C for the HCl–Aliquat® 336 system: 5 g L⁻¹ In (○), 10 g L⁻¹ In (□), 60 g L⁻¹ (△) and 100 g L⁻¹ (●). The volume ratio of the aqueous to the organic phase is 1:1. Aqueous phase: Initial HCl concentration 0.5 M.

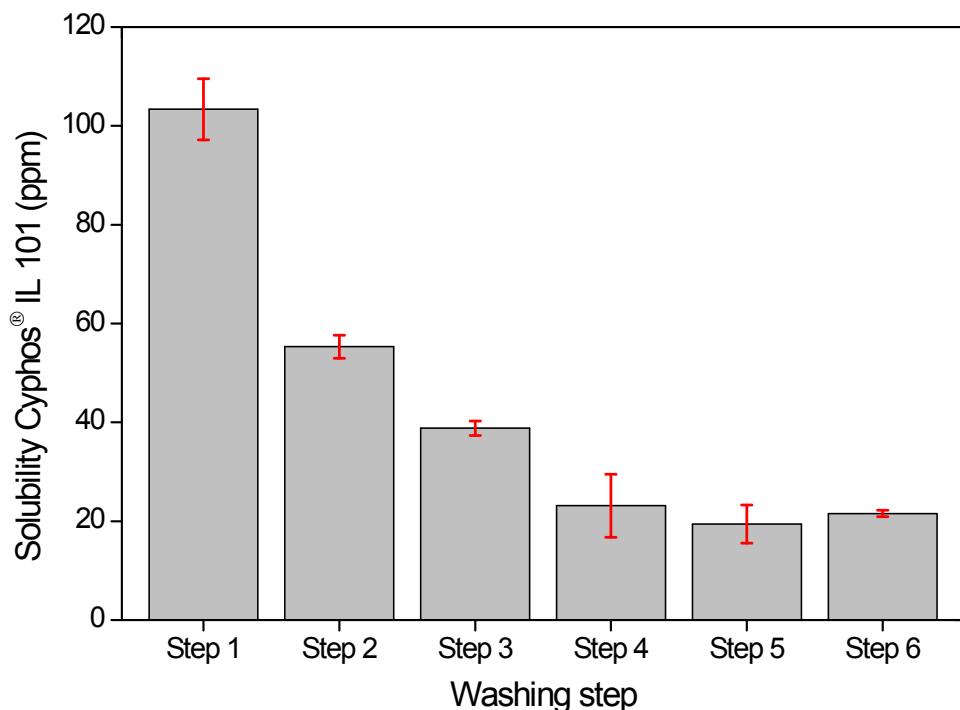

Fig. S4 Amount of Cyphos® IL 101 dissolved in a 0.05 M NaCl solution after each washing step at room temperature, for a 1:25 volume ratio.

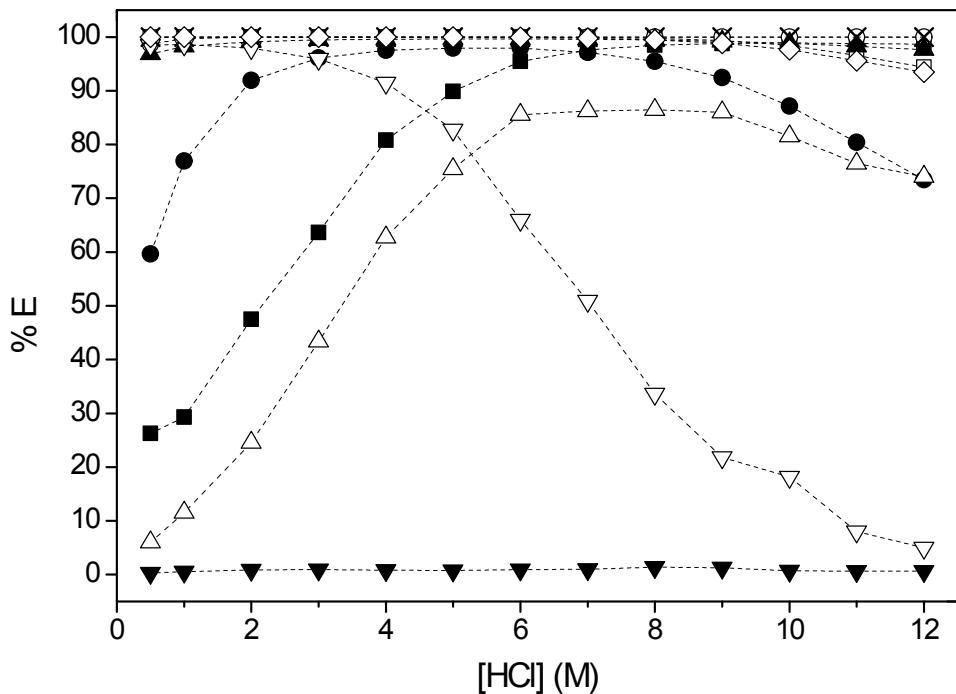

Fig. S5 Percentages extraction (%E) as a function of the HCl concentration for the HCl–Cyphos® IL 101 system at 60 °C. The volume ratio of the aqueous to the organic phase is 1: 1. Aqueous phase: Initial metal concentrations: 5 g L⁻¹ of cadmium(II) (●), copper(II) (◇), iron(III) (◇), indium(III) (▲), manganese(II) (□), nickel(II) (□), tin(IV) (◇) and zinc(II) (※) and 1 g L⁻¹ of arsenic(III) (○) and lead(II) (◆).

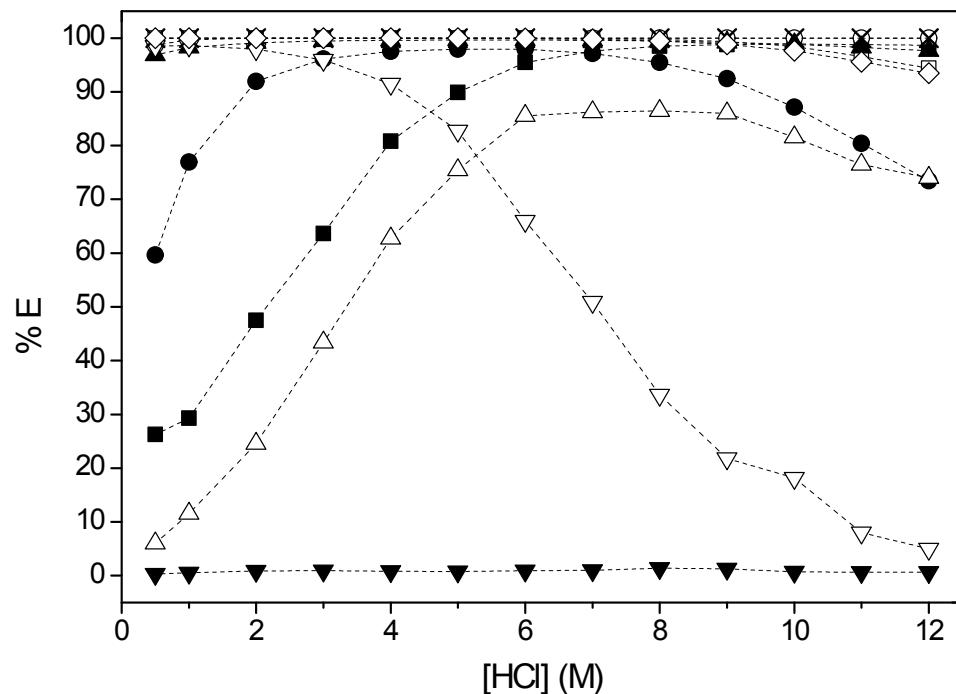

Fig. S6 Percentages extraction (%E) as a function of the HCl concentration for the HCl–Aliquat® 336 system at 60 °C. The volume ratio of the aqueous to the organic phase is 1: 1. Aqueous phase: Initial metal concentrations: 5 g L⁻¹ of cadmium(II) (●), copper(II) (◇), iron(III) (◇), indium(III) (▲), manganese(II) (□), nickel(II) (□), tin(IV) (◇) and zinc(II) (※) and 1 g L⁻¹ of arsenic(III) (○) and lead(II) (◆).
