| <sup>1</sup> H and <sup>13</sup> C NMR spectrum of methyl ( <i>E</i> )-4-acetoxybut-2-enoate          | 10   |
| Calculation of ML and MVG yield from corn cobs                                                        | 11   |

# Dimethyl (*E*)-2,5-dihydroxyhex-3-enedioate

# Methyl (*E*)-2-hydroxytetradec-3-enoate

# Methyl (*E*)-2-hydroxydodec-3-enoate

# Methyl (E)-2-hydroxyhexadec-3-enoate

# 6-Ethyl 1-methyl (E)-hex-2-enedioate

# 1,6-Dimethyl (*E*)-hex-2-enedioate

# Methyl 2-acetoxybut-3-enoate

# **(E)-Hex-2-enedioic acid**

# Methyl (*E*)-4-acetoxybut-2-enoate

### Calculation of ML and MVG yield from corn cobs

1: reducing sugar from corn cobs, ref. 10 (Y. D. Hang, E. E. Woodams, *Lebensm. Wiss. Technol.*, 2001, **34**, 140–142)

1000 kg corn cob dry matter → 550 kg reducing sugars

|            |        |
|------------|--------|
| Xylose     | 200 kg |
| Glucose    | 260 kg |
| Arabinose  | 18 kg  |
| Cellobiose | 96 kg  |

2: ML and MVG from xylose, ref. 6b (M. S. Holm, Y. J. Pagán-Torres, S. Saravanamurugan, A. Riisager, J. A. Dumesic, E. Taarning, *Green Chem.*, 2012, **14**, 702–706)

Xylose → ML (42 %) + MVG (7%)

|    |              |              |              |
|----|--------------|--------------|--------------|
| Mw | 150.13 g/mol | 104.11 g/mol | 116.12 g/mol |
| n  | 1332 mol     | 933 mol      | 117 mol      |
| m  | 200000 g     | 97085 g      | 13536 g      |

3: ML and MVG from Glucose, ref. 9 (S. Tolborg, S. Meier, I. Sádaba, S. G. Elliot, S. K. Kristensen, S. Shunmugavel, A. Riisager, P. Fristrup, T. Skrydstrup, E. Taarning, *Green Chem.*, 2016, **18**, 3360–3369)

Glucose → ML (48 %) + MVG (18%)

|    |              |              |              |
|----|--------------|--------------|--------------|
| Mw | 180.16 g/mol | 104.11 g/mol | 116.12 g/mol |
| n  | 1443 mol     | 1385 mol     | 390 mol      |
| m  | 260000 g     | 144238 g     | 45247 g      |

4: ML and MVG from Arabinose, ref. 6b (M. S. Holm, Y. J. Pagán-Torres, S. Saravanamurugan, A. Riisager, J. A. Dumesic, E. Taarning, *Green Chem.*, 2012, **14**, 702–706)

Arabinose → ML (39 %) + MVG (8%)

|    |              |              |              |
|----|--------------|--------------|--------------|
| Mw | 150.13 g/mol | 104.11 g/mol | 116.12 g/mol |
| n  | 120 mol      | 78 mol       | 12 mol       |
| m  | 18000 g      | 8114 g       | 1392 g       |

5: ML and MVG from Cellobiose, ref. 6b (M. S. Holm, Y. J. Pagán-Torres, S. Saravanamurugan, A. Riisager, J. A. Dumesic, E. Taarning, *Green Chem.*, 2012, **14**, 702–706)

Cellobiose → ML (13 %) + MVG (2%)

|    |              |              |              |
|----|--------------|--------------|--------------|
| Mw | 342.30 g/mol | 104.11 g/mol | 116.12 g/mol |
| n  | 280 mol      | 146 mol      | 17 mol       |
| m  | 96000 g      | 15183 g      | 1954 g       |

6: Total yield of ML and MVG from corn cob dry matter:

From 1000 kg of corn cob dry matter is obtained: ML: 265 kg MVG: 62 kg
