

Supplementary Figures

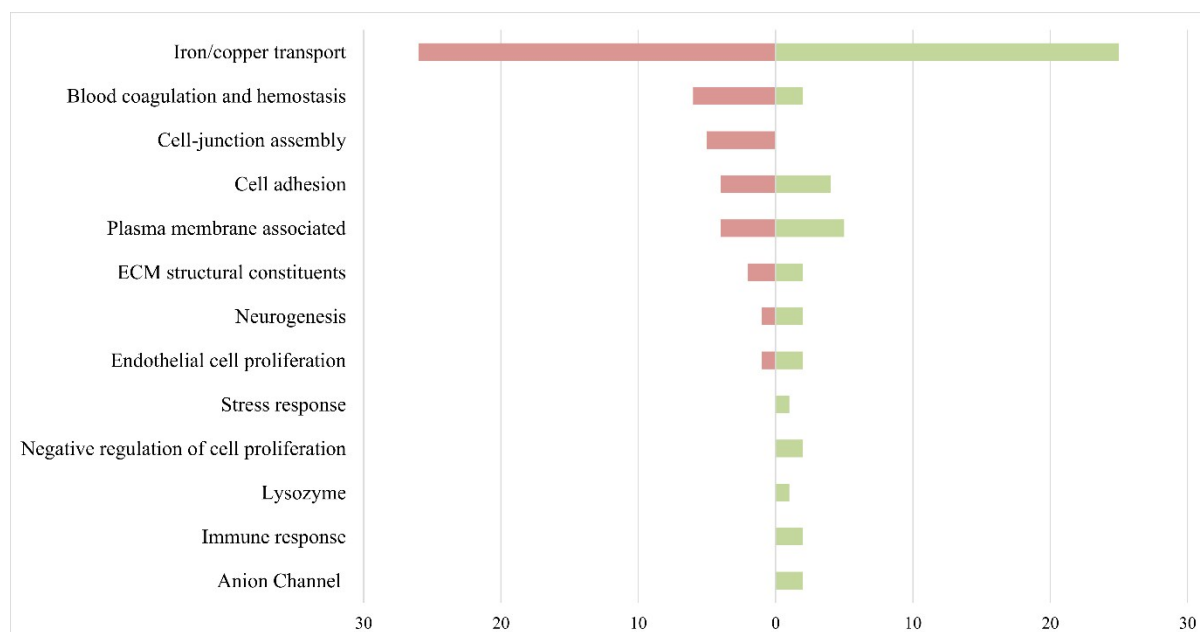

Figure S1: Overview on leptospiral-host interactions I. A bar chart representation of number of interactions potentially brought about by *L. interrogans* and *L. biflexa* proteins with human proteins, is shown. Green coloured bars correspond to interactions mediated by proteins of *L. biflexa*, while peach coloured bars denote interactions mediated by *L. interrogans* proteins with human proteins under each functional category of human.

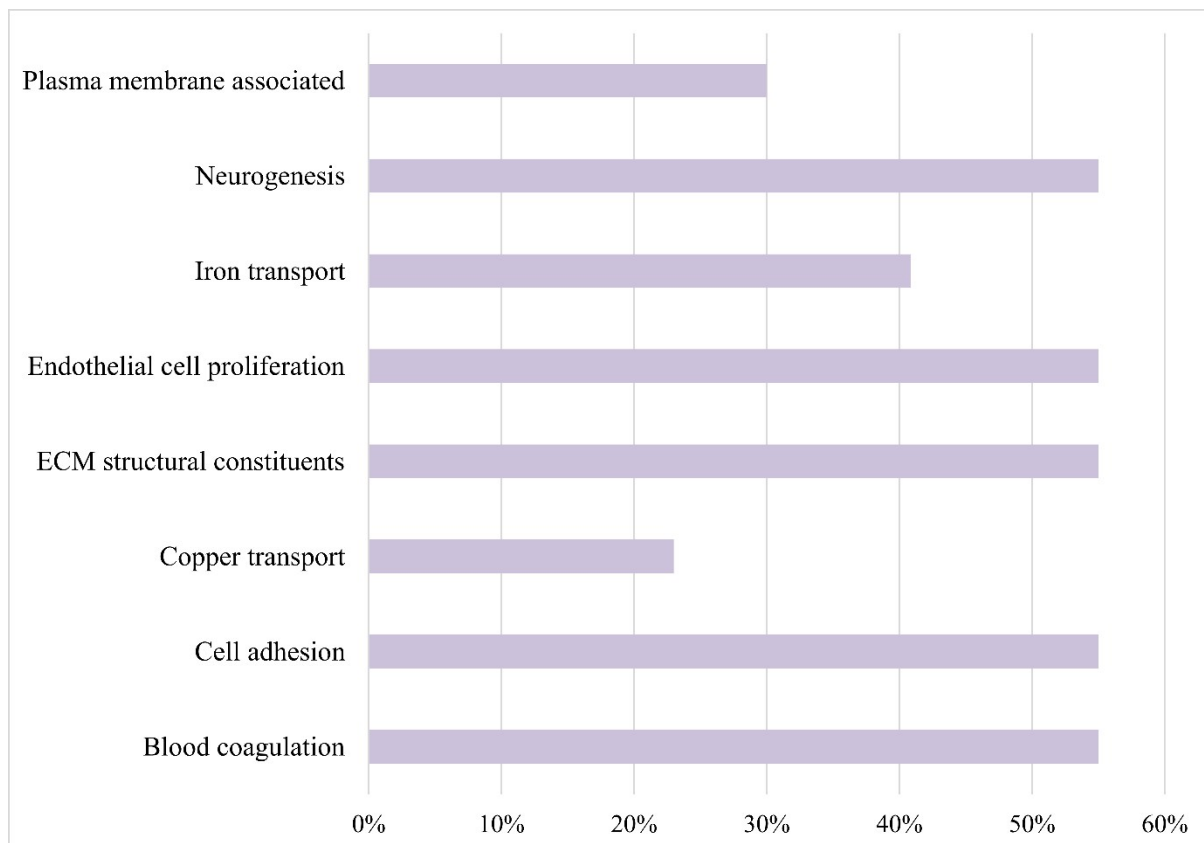

Figure S2: Orthologous proteins and their interactions with host. Average sequence similarity of proteins of both the leptospire, *L. interrogans* and *L. biflexa*, potentially mediating interactions under each functional category of human is described.
