Formation of target-specific binding sites in enzymes. Solid-phase molecular imprinting of HRP

J. Czulak, A. Guerreiro, K. Metran, F. Canfarotta, A. Goddard, R. H. Cowan, A. W. Trochimczuk, S. Piletsky

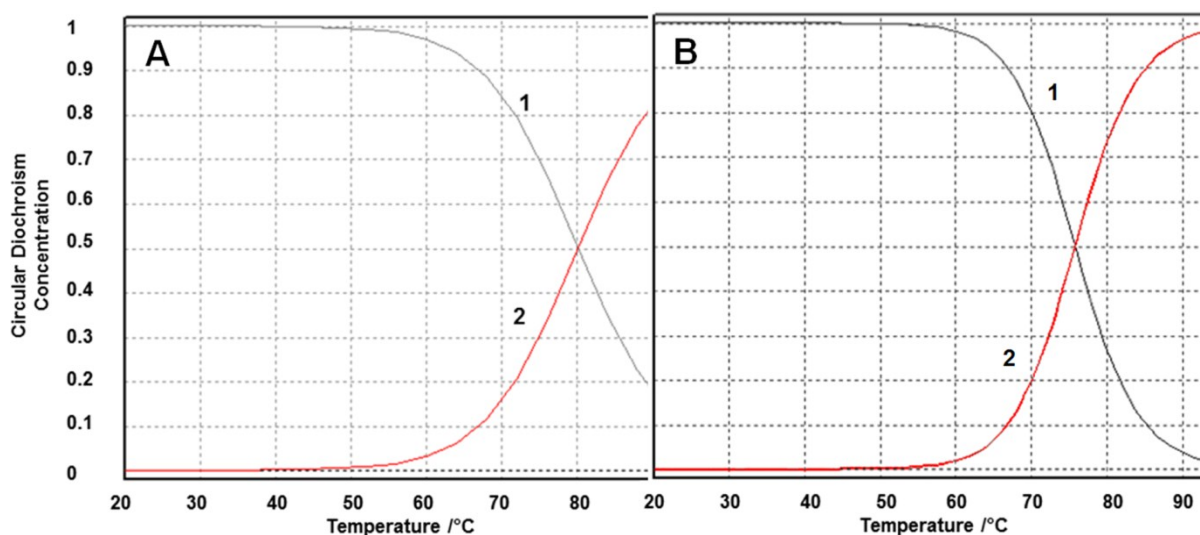

Figure ESI 1. Thermal denaturation of imprinted cross-linked HRP (A) and native non-cross-linked HRP processed through the immobilized template (vancomycin) but without addition of GA (B). Changes in folded (1) and unfolded (2) forms of HRP in response to increased temperature.

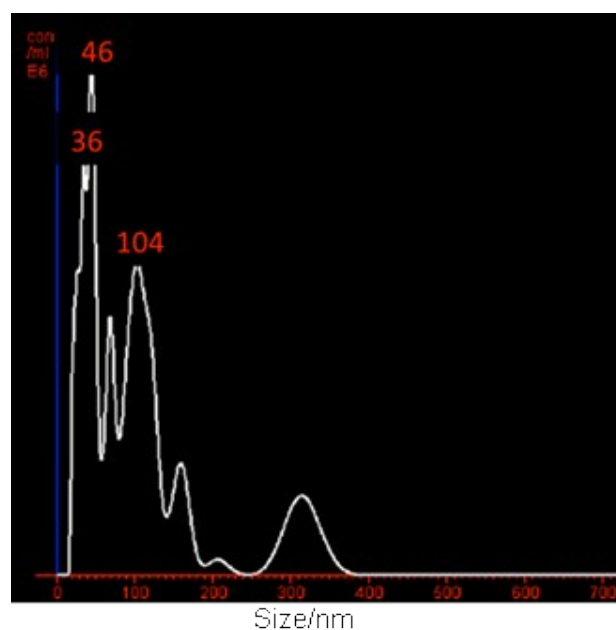

Figure ESI 2. Nanoparticle Tracking Analysis trace of cross-linked HRP nanoparticles in water obtained on a Nanosight instrument.
