Synthesis of ZnO nanocrystals.

In a typical synthesis, 0.2 mmol of acetylacetone (2,4-pentadione) and 1.5 mmol of TOPO were added into a mixed solution containing 3 mL of OAm and 4 mL of BA, and heated at 70 °C for 10 min. After that, the mixed solution was heated up to 195 °C and kept at this temperature for 15 min, and then cooled down to 160 °C. In the next step, 0.55 mmol of Zn(OAc)₂·2H₂O and 2 mL of OAm were added into the above solution. Then the reaction mixture was heated up to 195 °C and kept at this temperature for 30 min before cooling down to room temperature naturally. After that, the precipitate was washed by mixed hexane, ethanol and acetone several times, separated from solution by centrifugation, and then dried in vacuum.

Ligand exchange of ZnO and ZnO-based photocatalysts. Before the photocatalytic experiment, the hydrophobic surfactants/ligands were exchanged by hydrophilic ligands. The ligand-exchange procedure was achieved by using imidazole solution based on previous report.^{1, 2} Typically, ZnO or ZnO-based hybrid nanocrystals (25 mg) were dissolved in 20 mL of CHCl₃ and mixed with 20 mL of imidazole solution (5 mg/mL). The solution was strongly stirred for 20 min at room temperature under inert atmosphere (argon gas), and were isolated by centrifugation and subsequent washed twice with ethanol, and then dried in vacuum.

Photocatalytic tests. In the photocatalytic experiments, 10 mg of the sample was suspended in 100 mL RhB aqueous solution (0.01 g/L), and then the aqueous suspension was agitated in the dark for 1 h to reach adsorption–desorption equilibrium of the dyes on the surfaces of

photocatalyst. Subsequently, the mixture was irradiated using a 175 W UV lamp (major wavelength 365 nm). To determine the degradation percentage of RhB as a function of time at different intervals, 3.0 mL aliquots of the suspension were collected and centrifuged for 10 min at a rate of 3000 rpm, and then the absorbance of the RhB solution was measured using a Shimadzu UV-2550 ultraviolet-visible spectrophotometer.
