

Phospholipase A2 as a point of care alternative to serum amylase and pancreatic lipase

Nathan J. Liu,^{1,3} Robert Chapman,¹ Yiyang Lin,¹ Andrew Bentham,² Matthew Tyreman,² Natalie Philips,³ Shahid A. Khan,³ and Molly M. Stevens.^{1,*}

SUPPORTING INFORMATION

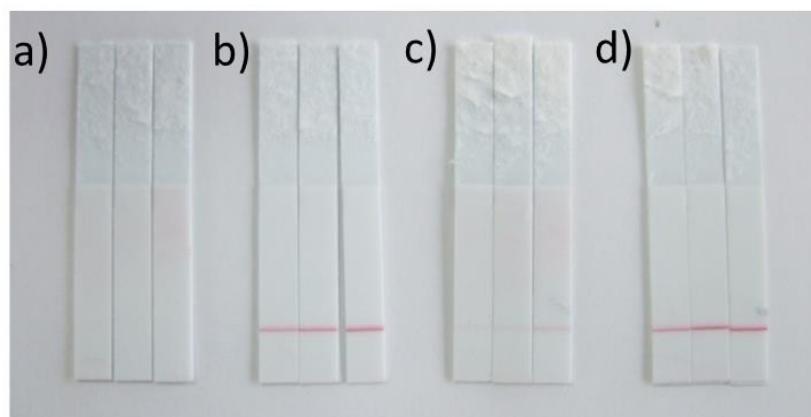

Figure S1. Images of LFD test strips prepared with BSA conjugated Fab 1BD2 (a-b) and BSA conjugated Fab 1BD1 (c-d) immobilised on the test line. Strips have been run with 0 ng/mL (a, c) and 100 ng/mL (b, d) PLA₂-IB in the assay buffer HEPES (50 mM, 10 mg/mL BSA), and BSA conjugated Fab 1BC1 AuNPs prepared in 20 mM TAPS pH 8.5 (left strips), 20 mM Borate pH 8.5 (middle strips) and 20 mM Borate pH 9.5 (right strips). Non-specific binding is clearly visible on the 1BD1 test lines (c), but not on the 1BD2 test lines (a).

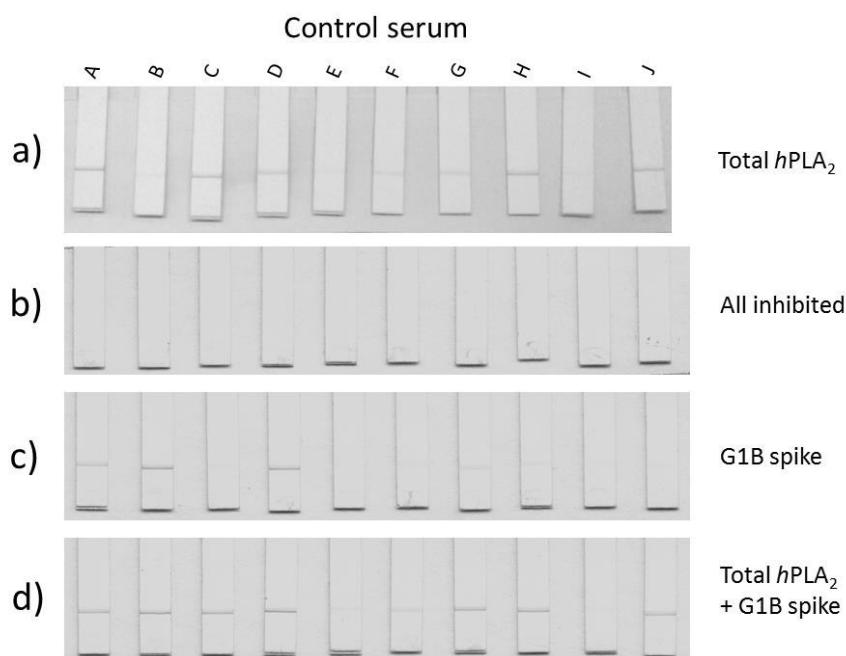

Figure S2. Images of LFD strips after running the activity assay on a range of 10 healthy serum samples. a) Signal without any inhibition of the enzyme. b) Signal after inhibition of sPLA₂-IIA with 10 μ M LY315920, c) Signal after inhibition of sPLA₂-IIA with 10 μ M LY315920 and addition of a 5 nM PLA₂-IB spike, and d) Signal without inhibitor but with the addition of a 5 nM PLA₂-IB spike. In cases where the total PLA₂ activity is low, the PLA₂-IB spike can be seen to have a variable effect on the signal generation.

Table S1. Spearman and Pearson correlation coefficients between the biomarkers measured

	n	Amylase : Lipase	Amylase : [sPLA ₂ -IB]	Lipase : [sPLA ₂ -IB]	sPLA ₂ -IB (concentration : activity)	sPLA ₂ -IB concentration (ELISA : LFD)
p (Spearman)						
All samples	153	0.744	0.677	0.684	0.357	0.962
All Clinical and controls	118	0.728	0.702	0.755	0.477	0.960
Unique clinical and controls	86	0.785	0.738	0.763	0.553	0.949
p (Pearson)						
All samples	153	0.629	0.555	0.448	0.575	0.872
All Clinical and controls	118	0.633	0.575	0.535	0.621	0.869
Unique clinical and controls	86	0.711	0.738	0.661	0.713	0.813

Table S2. Welch's one way analysis of variance (ANOVA) tables for the biomarkers measured (all clinical samples, n=118)
