This supporting information includes figures from S1 to S3.

Figure S1. SEM images of the PbI₂ films fabricated from different concentrations of NMP. The films were annealed at 100 °C for 30 min. (a) 2%, (b) 4%, (c) 8%, (d) 30%.

Figure S2. Photographs of PbI₂/DMF solutions with different concentrations of NMP.

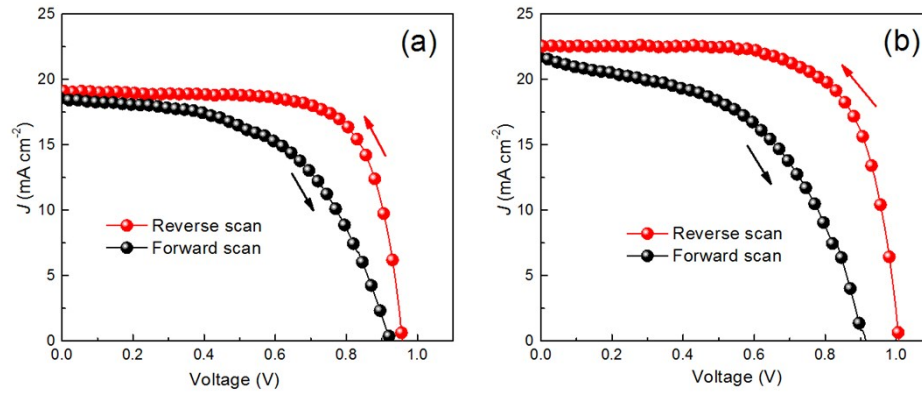

Figure S3. Light J - V curves obtained from reverse and forward scans of the PSCs fabricated from PbI_2/DMF solutions adding with different concentrations of NMP. (a)0%, (b)10%.
