### **List of Contents**

1. General Information and Experimental Procedures	S1-S2
2. Spectral data ( $^1\text{H}$ and $^{13}\text{C}$ NMR, GC-MS, ESI-MS and IR) of all compounds	S3-S11
3. $^1\text{H}$ and $^{13}\text{C}$ -NMR, ESI-MS (HR-MS) and GC-MS Spectra of all compounds	S12-S65

### **General information:**

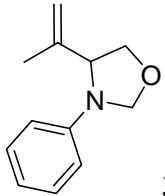

All the reagents were commercial grade and purified according to the established procedures. Organic extracts were dried over anhydrous magnesium sulphate. Solvents were removed in a rotary evaporator under reduced pressure. Silica gel (60-120 mesh size) was used for the column chromatography. Reactions were monitored by TLC on silica gel 60 F<sub>254</sub> (0.25mm). NMR spectra were recorded in CDCl<sub>3</sub> with tetramethylsilane (TMS) as the internal standard for  $^1\text{H}$  NMR (400 MHz) and for  $^{13}\text{C}$  NMR (100 MHz). The

NMR data was collected on Varian 400 MHz and Bruker 400 MHz AVIII HD spectrometers. IR spectra were recorded on NICOLET IS-10 FT-IR spectrometer. GC-MS analysis carried out on an Agilent GC-MS (7890A – 5975C VL MSD) system.

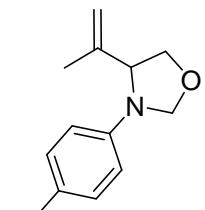

**General Procedure for the Preparation of 4-Propenyl-3-Aryl Oxazolidines:** To the solution of anh. FeCl<sub>2</sub> (0.05 mmol), allyl alcohol (1.5 mmol) and para-formaldehyde (0.6 mmol) in anh. THF (5 mL), the aryl hydroxylamine (0.5 mmol) solution was added slowly in THF (5 mL) using a syringe pump over 4 hours at 60 °C while keeping the flask under inert atmosphere using nitrogen balloon. Reactions were allowed to continue for two more hours for the complete consumption of aryl hydroxylamine. Then the mixture was filtered through celite and the filtrate was concentrated to dryness. The crude product was purified over a short column of silica gel (hexane/ethyl acetate eluents) to obtain the pure oxazolidine which was then directly analyzed by GC-MS, ESI-MS, NMR and FT-IR.

**General Procedure for the Synthesis of Allyl Amino Alcohols:** To the propenyl oxazolidine (obtained from the previous step) in a RB flask, 2 mL of conc. HCl was added and stirred for 2 hours. Once the reaction is completed (monitored by TLC and GC-MS), the mixture was filtered through celite and the filtrate was concentrated to dryness. The crude product was purified over a short column of silica gel (hexane/ethyl acetate eluents) and the isolated pure N-aryl amino alcohol which was then directly analyzed by GC-MS, ESI-MS, NMR and FT-IR.
