

Supplementary Information

Fourier Transform Infrared Spectroscopy was used to investigate the phase transformation in PVDF samples. The supplementary Figure 1 shows the FTIR spectra of pure PVDF and PVDF/PTFO nanocomposite samples of 5 wt% PTFO and 10 wt% PTFO. The characteristic peaks at 530, 618, 764 and 813 cm⁻¹ is a clear indication that pure PVDF as well as PVDF/PTFO nanocomposites crystallize predominantly in the α -phase. It is also observed that the addition of PTFO tends to increase the intensity of the peaks corresponding to the α -phase.

Supplementary Figure 1: FTIR analysis of pure PVDF and PVDF/PTFO nanocomposite film prepared via compression molding technique.

Supplementary Table 1: The influence of PTFO nanoparticles on PVDF matrix on the various investigated for PVDF/PTFO nanocomposite

Parameters	PVDF/PTFO Nanocomposites			
	0 wt%	5 wt%	10 wt%	25 wt%
ϵ' (1kHz)	9.7	9.8	9.7	12
