General Information: 2-methylaminopyridine, 2-hydrazinylpyridine, sulfonyl hydrazides and iodine were purchased from commercial sources and used as received. Reagent grade THF was purchased from Sigma-Aldrich and distilled over sodium. Purification of reaction products was carried out by flash column chromatography using Sorbent Technologies Standard Grade silica gel (60 Å, 230–400 mesh). Analytical thin layer chromatography was performed on EM Reagent 0.25 mm silica gel 60 F254 plates. Visualization was accomplished with UV light, potassium permanganate and DragendorffMunier stains followed by heating. Melting points were recorded on a Thomas Hoover capillary melting point apparatus and are uncorrected. Proton nuclear magnetic resonance spectra (¹HNMR) were recorded on Agilent-400 MHz and are reported in ppm using chloroform as the internal standard (7.24 ppm). Data are reported as app = apparent, s = singlet, d = doublet, t = triplet, q = quartet, m = multiplet, comp = complex, br = broad; and coupling constant(s) in Hz. Proton-decoupled carbon nuclear magnetic resonance spectra (¹³C-NMR) were recorded on a Agilent-400 MHz, Bruker-400 MHz and are reported in ppm using chloroform as the internal standard (77.0 ppm). Mass spectra were recorded on Agilent mass spectrum

General Procedure for the oxidative desulfurative cyclization of dithioesters :

To a solution of dithioester (1.0 eq, 1.0 mmol) in ethanol (5 mL) was added amine or hydrazine (1.1 eq, 1.1 mmol) at room temperature, the resulting mixture was stirred for 45 min. monitored the dithioester could no longer be detected. To the above mixture was added I₂ (2.2 equiv, 2.2 mmol). The mixture was stirred at room temperature for 2h and progress was monitored by TLC. The reaction mixture was heated to 80 °C for 12-24 hrs. Once the reaction was completed, the reaction mixture was cooled to room temperature and ethanol was removed using rotary evaporator. The reaction mixture was quenched with 10 mL of water and; the aqueous layer was extracted with EtOAc (15 mL X 3). The combined organic layers were washed with water, dried over anhydrous Na₂SO₄. The solvent was removed under reduced pressure; the residue was purified by silica gel chromatography.
