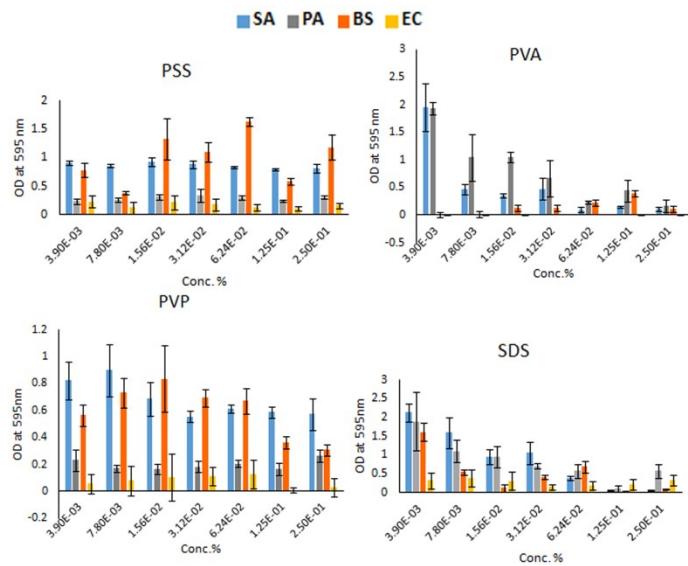

Fig. S7. Antibiofilm studies of capping agents (PSS, PVA, PVP and SDS) against four different bacteria. SA = *Staphylococcus aureus*, BS = *Bacillus subtilis*, PA = *Pseudomonas aeruginosa* and EC= E. Coli .

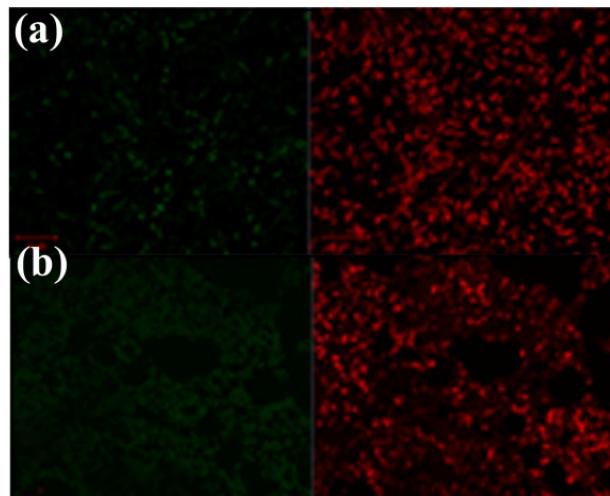

Fig.S8. Live-dead staining and confocal imaging of (a) *P.aeruginosa* and (b) *S. aureus* treated with PVP-AgNPs. Bacteria was grown for 3 days on the surface of a glass slide in 0.1 X nutrient broth and tryptic soy broth respectively, stained with acridine orange and propidium iodide and imaged using confocal microscopy.
