

Suppl. 1. Oxidative damage biomarkers (lipid peroxidation (LPO) and protein carbonyls (CO)) at 8 and 24 hpf in control zebrafish embryos and exposed to ketamine treatments in different developmental stages.

Data from at least four independent replicates of 100 animals each, is expressed as mean ± SD for parametric data distribution or median and range for non-parametric data. Statistical analysis was performed using one-way ANOVA followed by Tukey's multiple-comparison test or Kruskal-Wallis followed by Dunn's test (*p*<0.05).
