## Figures and Tables content

### List of Figures

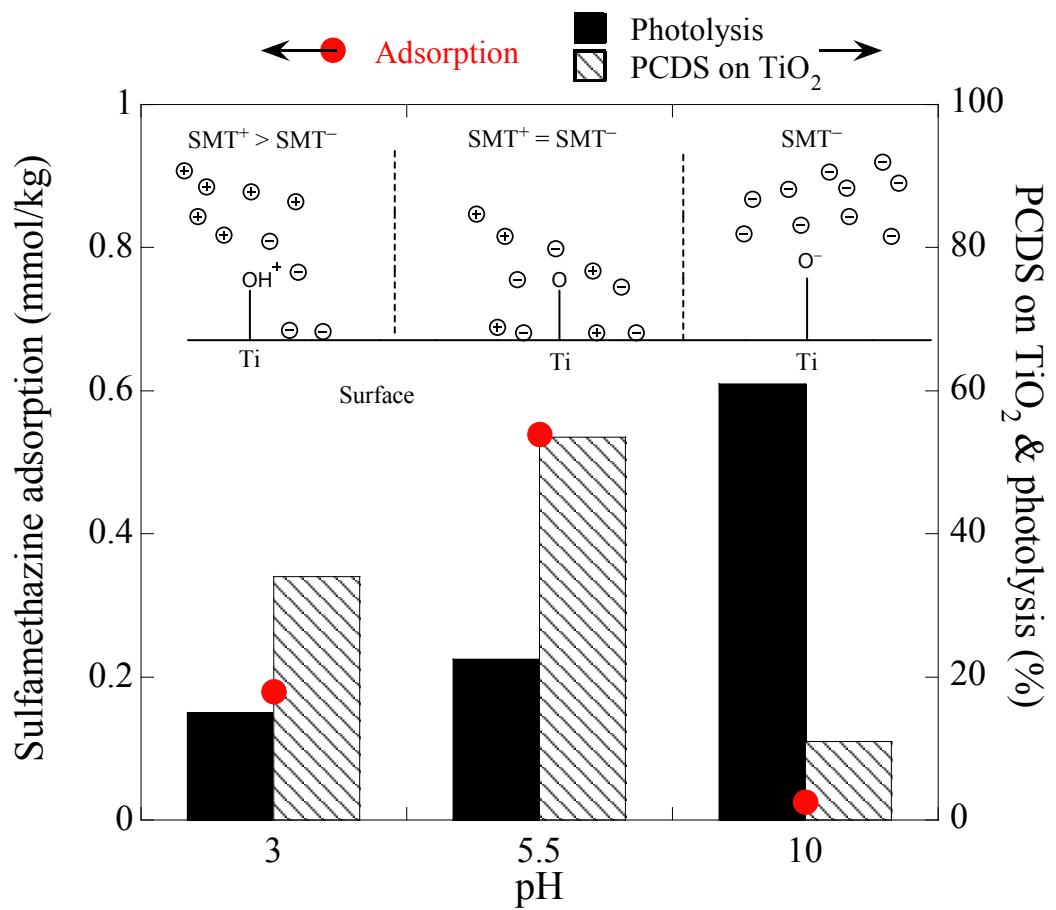

<b>Fig. S1</b> The kinetics of photo-catalytic decomposition of SMT (PCDS) on TiO <sub>2</sub> at pH 3, 5.5, and 10. The insert was the simulation of PCDS using the PFO model.....	3
<b>Fig. S2</b> Sulfamethazine (SMT) adsorption on 0.5 g/L TiO <sub>2</sub> , and the contributions of self-photolysis and the photo-catalytic decomposition of SMT (PCDS) to overall SMT photo-decomposition at pH 3, 5.5, and 10. ....	4
<b>Fig. S3</b> The influences of the TiO <sub>2</sub> loadings on sulfamethazine photo-decomposition. The inset was the simulation results of SMT photo-decomposition using the PFO model.....	5
<b>Fig. S4</b> Effects of (a) TiO <sub>2</sub> loading on dissolved organic carbon (DOC) contents, and (b) SMT initial concentration on sulfamethazine (SMT) photo-decomposition. The inset in (b) was the simulation results of SMT photo-decomposition using the PFO model.....	6
<b>Fig. S5</b> Effects of sodium iodide (NaI) and isopropanol (ISP) on sulfamethazine (SMT) photo-decomposition in the presence of 0.5 g/L TiO <sub>2</sub> at pH 5.5. The inset was the simulation results of SMT photo-decomposition with NaI and ISP using the PFO model.....	7
<b>Fig. S6</b> HPLC spectra of the photo-decomposition of sulfamethazine (SMT) and the major intermediates. Sample was extracted after photo-decomposition of 0.072 mM SMT in a system with 0.5 g/L TiO <sub>2</sub> at pH 5.5.....	8

### List of Tables

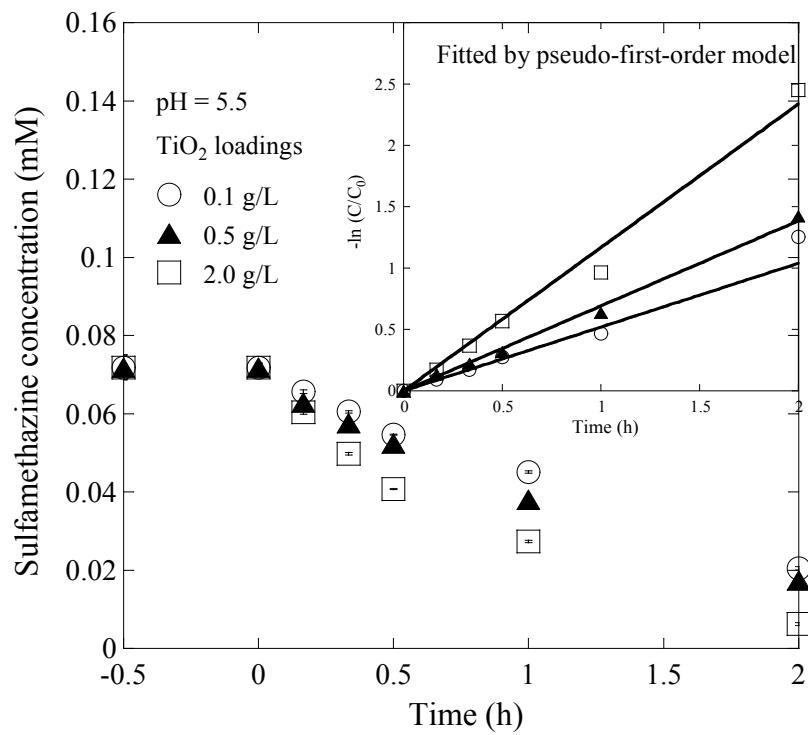

<b>Table S1</b> HPLC analyses of the retention time of sulfamethazine (SMT) and its major decomposition products. ....	9
--	---

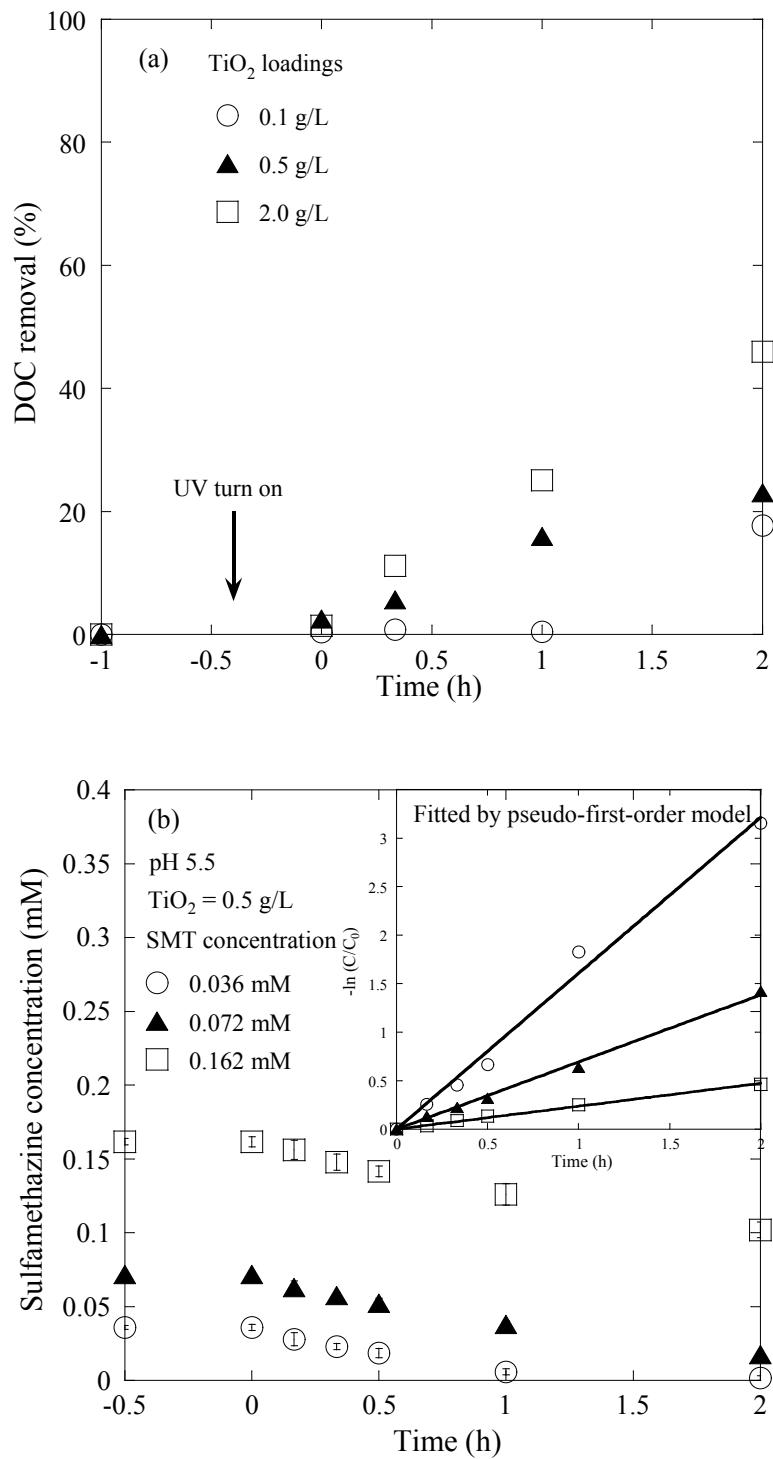

**Fig. S1** The kinetics of photo-catalytic decomposition of 0.072 mM SMT (PCDS) on TiO<sub>2</sub> at pH 3, 5.5, and 10. The insert was the simulation of PCDS using the PFO model.

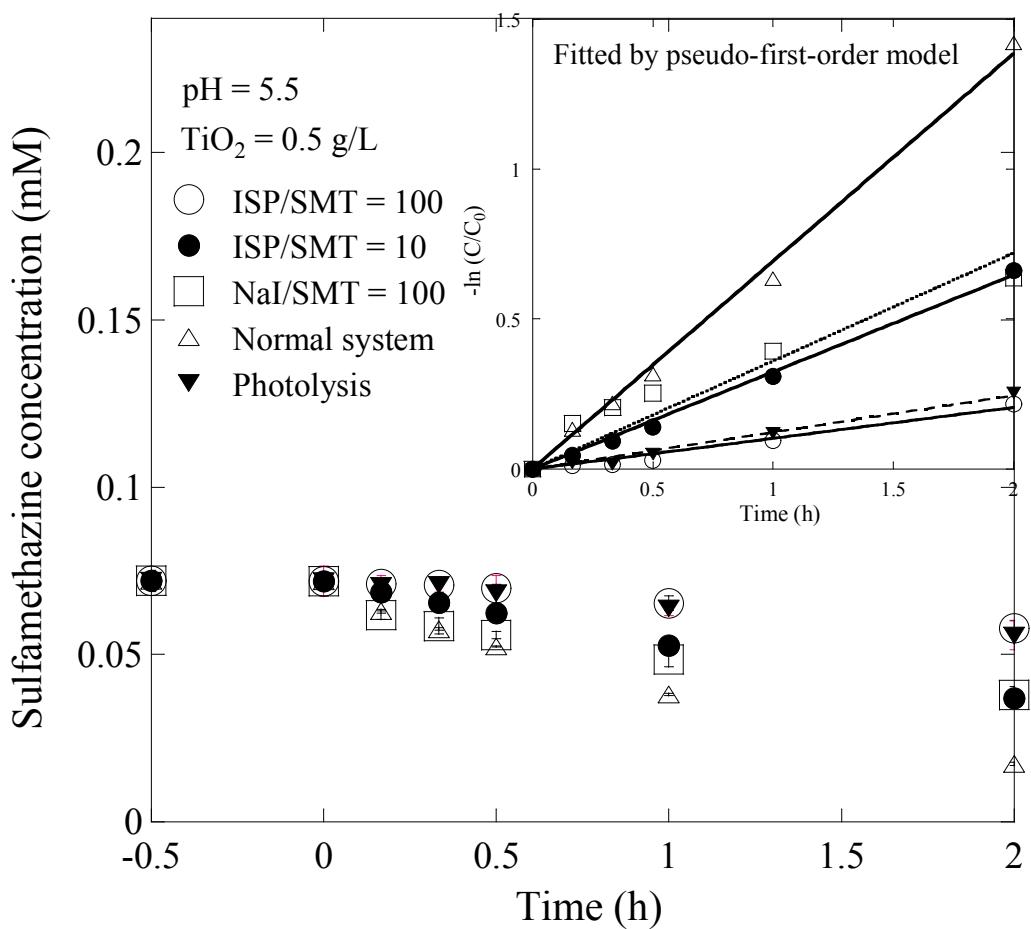

**Fig. S2** Adsorption of 0.072 mM sulfamethazine (SMT) on 0.5 g/L  $\text{TiO}_2$ , and the contributions of self-photolysis and the photo-catalytic decomposition of SMT (PCDS) to the overall SMT photo-decomposition at pH 3, 5.5, and 10.

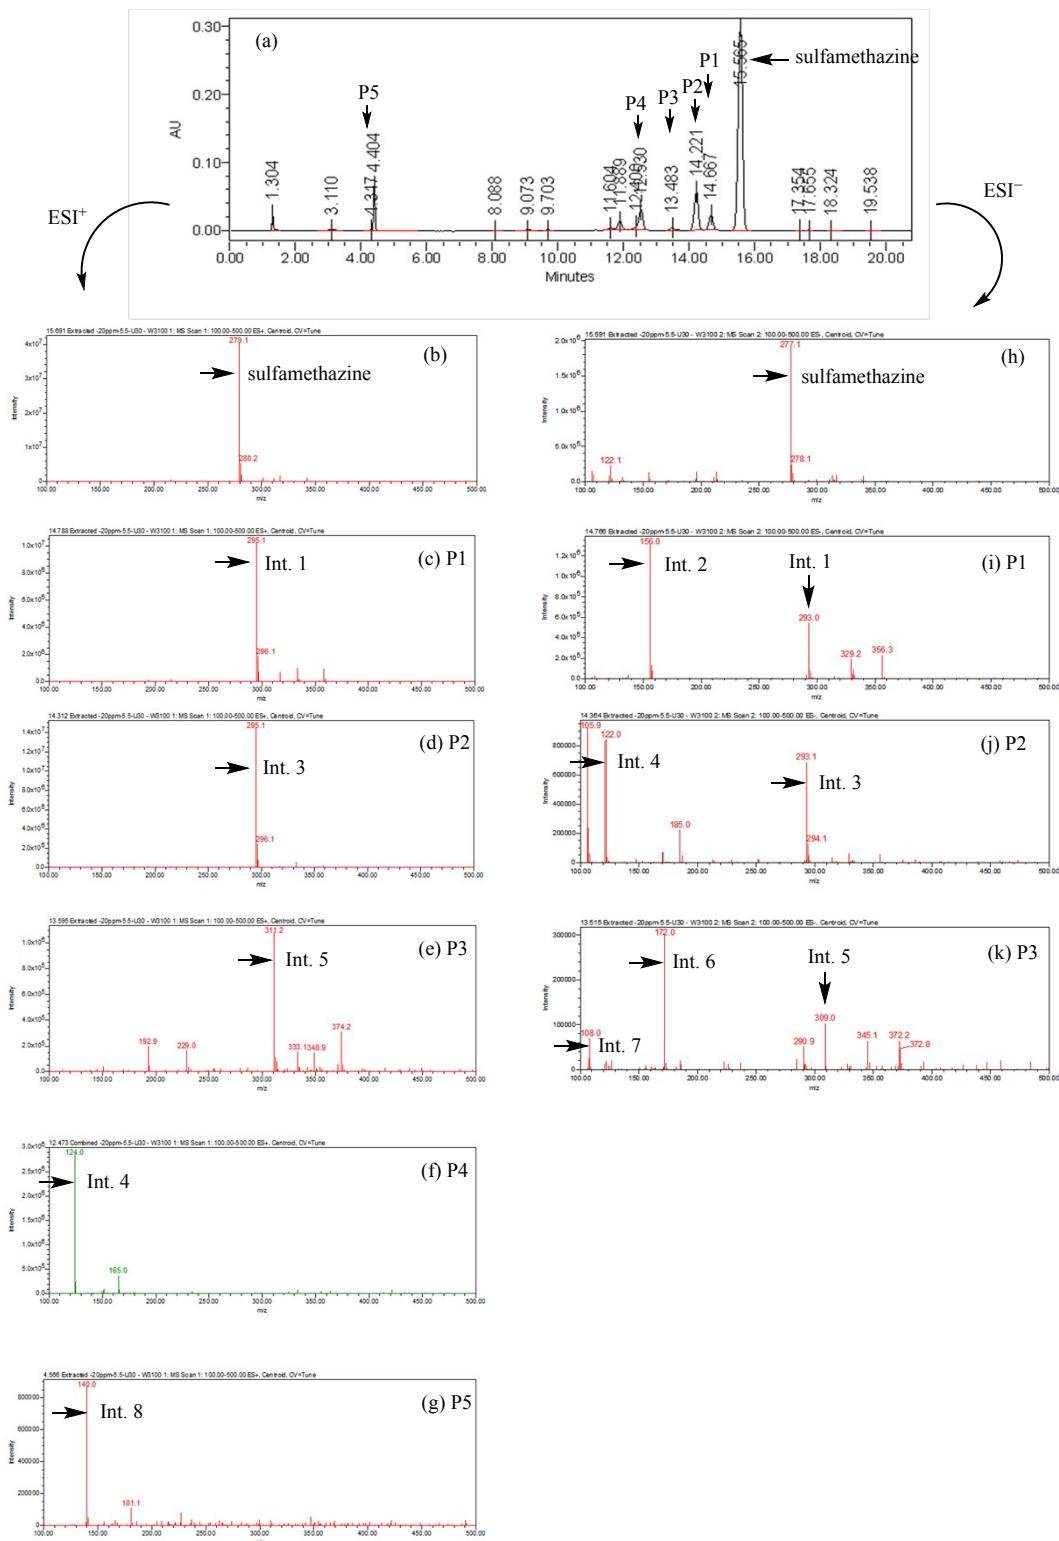

**Fig. S3** The influences of the TiO<sub>2</sub> loadings on 0.072 mM sulfamethazine photo-decomposition. The inset was the simulation results of SMT photo-decomposition using the PFO model.

**Fig. S4** Effects of (a)  $\text{TiO}_2$  loading on dissolved organic carbon (DOC) contents, and (b) SMT initial concentration on sulfamethazine (SMT) photo-decomposition. The inset in (b) was the simulation results of SMT photo-decomposition using the PFO model.

**Fig. S5** Effects of sodium iodide (NaI) and isopropanol (ISP) on 0.072 mM sulfamethazine (SMT) photo-decomposition in the presence of 0.5 g/L TiO<sub>2</sub> at pH 5.5. The inset was the simulation results of SMT photo-decomposition with NaI and ISP using the PFO model. The “normal system” represented the system without the addition of any radical scavengers.

**Fig. S6** HPLC spectra of the photo-decomposition of sulfamethazine (SMT) and the major intermediates. Sample was extracted after photo-decomposition of 0.072 mM SMT in a system with 0.5 g/L TiO<sub>2</sub> at pH 5.5.

**Table S1** HPLC analyses of 0.072 mM sulfamethazine (SMT) and its major photo-decomposition products.

Compounds	Retention time (min)	ESI <sup>+</sup> (m/z)	ESI <sup>-</sup> (m/z)
SMT	15.565	279	277
<sup>a</sup> Int. 1	14.667	295	293
Int. 2		<sup>b</sup> n.d.	156
Int. 3	14.221	295	293
Int. 4	12.400	124	122
Int. 5		311	309
Int. 6	13.483	n.d.	172
Int. 7		n.d.	108
Int. 8	4.317	140	n.d.

<sup>a</sup> Int. indicated the intermediates of sulfamethazine photo-decomposition

<sup>b</sup> n.d. indicated the not detected
