Experimental section:

Materials and methods:

All the chemicals used in the present study were procured from Sigma-Aldrich and Alfa Aesar and were used as received without further purification. All the solvents were purchased from SD Fine, India, were of HPLC grade and used without further distillation.

Melting point was measured on Stuart SMP3 melting-point apparatus in open capillaries. Infrared spectrum was recorded on Bruker Apex FTIR spectrometer. UV-Vis spectroscopy was performed with analytik jena Specord S600 spectrometer in standard 3.0 mL quartz cell with 1cm path length. The ^1H NMR spectra were recorded on Bruker Ascend (400 MHz) instrument using TMS as internal reference and DMSO- d_6 as solvent. Resonance multiplicities are described as s (singlet), d (doublet), t (triplet) and m (multiplet). Mass spectrum was recorded on Bruker Daltonics *ESI* Q TOF. Cyclic voltammogram was recorded on Ivium electrochemical workstation (Vertex) at a scan rate of 20 mV/s with the potential range 1.0 mV to -1.0 mV.

We have performed the Density Functional Theory (DFT) simulation on the receptor molecule using GAUSSIAN 09 package. A closed shell Becke–Lee–Yang–Parr hybrid exchange-correlation three-parameter functional (B3LYP)¹⁻³ along with 6-311++G(d) basis set were used in the simulation to derive a complete geometry optimization for isolated receptor and its deprotonated form in the binding process. Berny's optimization algorithm was used to fully optimize the molecular geometry, which involves redundant internal coordinates. To confirm the convergence to the minima on the potential energy surface, the harmonic vibrational wavenumbers were calculated using analytic second derivatives and properly scale down to control the systematic errors caused by incompleteness of the basis set. In a second step the time dependent DFT (TD-DFT) method were used considering the same B3LYP exchange-correlation functional with 6-311++G (d,p) basis set to obtain the UV-Visible absorption spectra of free and deprotonated receptor.

Synthesis of (E)-1-(4-nitrobenzylidene)-2-(2,4-dinitrophenyl)hydrazine:

4-nitrobenzaldehyde (0.05 g, 0.33 mmol) and 2,4-dinitrophenylhydrazine(0.65 g, 0.33 mmol) were mixed in 5 ml ethanol. A drop of acetic acid was added and the reaction mixture was refluxed at 60°C for 5 h. The formation of the product was confirmed through TLC by the generation of single spot indicative of the disappearance of starting materials.

Yield: 85%., m. p. 280 °C.

^1H NMR (DMSO- d_6 , 400 MHz, ppm): δ 8.05 (s, H), 8.16 (s, H), 8.32-8.41 (m, 4H), 8.8 (s 1H), 8.86 (s, 1H), 11.85 (s 1H).

FTIR (KBr)(cm^{-1}): 3279(NH), 3089(Ar-CH), 1613(CH=N), 1510(C=C), 1331(NO_2), 1088(C-H)

Mass (ESI): m/z Calculated: 331.06 Obtained: 338(M+N⁺)

Calculation of binding constant:

Binding constant has been calculated using B-H equation⁴ (Eq.1).

$$1/(A-A_0) = 1/(A_{max} - A_0) + 1/K [F^-]^n (A_{max} - A_0) \text{ ----- (Eq.1)}$$

Where, A_0 , A , A_{max} are the absorption considered in the absence of F^- , at an intermediate, and at a concentration of saturation. K is binding constant, $[F^-]$ is concentration of F^- ion and n is the stoichiometric ratio.

Table S1: Changes in absorption maxima of receptor R in various solvents upon addition of 1eq. of TBAAcO in dry DMSO

Solvent	Dielectric constant	λ_{\max} (nm)
1,4-dioxane	2.21	553
Tetrahydrofuran	7.58	587
Dichloromethane	8.93	564
Acetone	20.70	569
Acetonitrile	37.50	563
Dimethylsulfoxide	46.80	576

Table S2: Binding ratio, binding constant and detection limit of receptor R

Anion	Media	Binding ratio	Binding constant	Detection limit (ppm)
AcO (TBA ⁺)	DMSO	1:1	$5.28 \times 10^4 \text{ M}^{-1}$	1.5
AcO (Na ⁺)	DMSO:H ₂ O (9:1 v/v)	1:1	$3 \times 10^4 \text{ M}^{-1}$	0.8
AcO (TBA ⁺)	DMSO:Tris HCl (9:1 v/v)	1:1	$1.33 \times 10^2 \text{ M}^{-1}$	15
F (TBA ⁺)	DMSO	1:1	$1.1 \times 10^2 \text{ M}^{-1}$	2.5
F (Na ⁺)	DMSO:H ₂ O (9:1 v/v)	1:1	$4.2 \times 10^4 \text{ M}^{-1}$	0.4
H ₂ PO ₄ (TBA ⁺)	DMSO	1:1	$3.15 \times 10^2 \text{ M}^{-1}$	3.3

Table S3: Mulliken charge distribution and spin densities derived from DFT calculations
