Superhydrophobic Hyper-Cross-linked Polymer Synthesized at a Room Temperature as Efficient Adsorbent for Volatile Organic Compounds

Junhui Wang,^{a,c†} Wan-Qiu Wang,^{b†} Zhengping Hao,^a Gang Wang,^{a,c} Yang Li,^{a,c} Jian-Gang Chen,^b Miaomiao Li,^a Jie Cheng^{*,a} and Zhao-Tie Liu^{*,b}

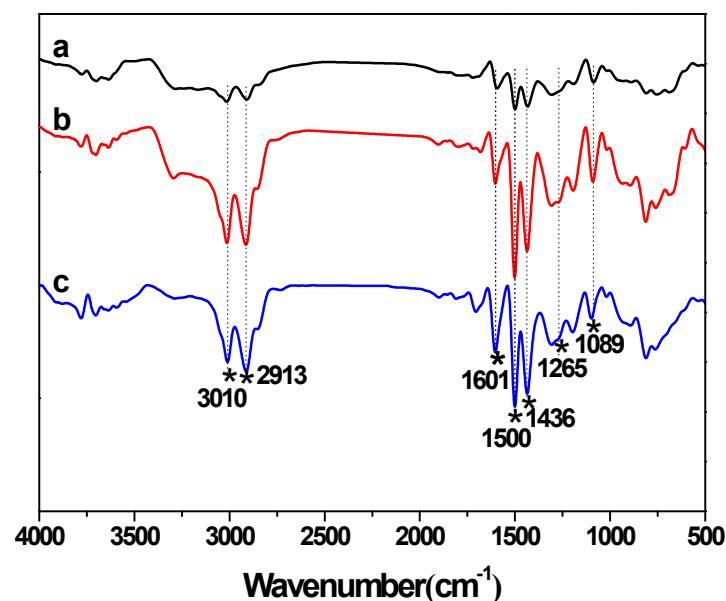

Figure S1. FT-IR spectra for ClBE-0.5 (a), ClBE-1.0 (b), ClBE-1.5 (c).

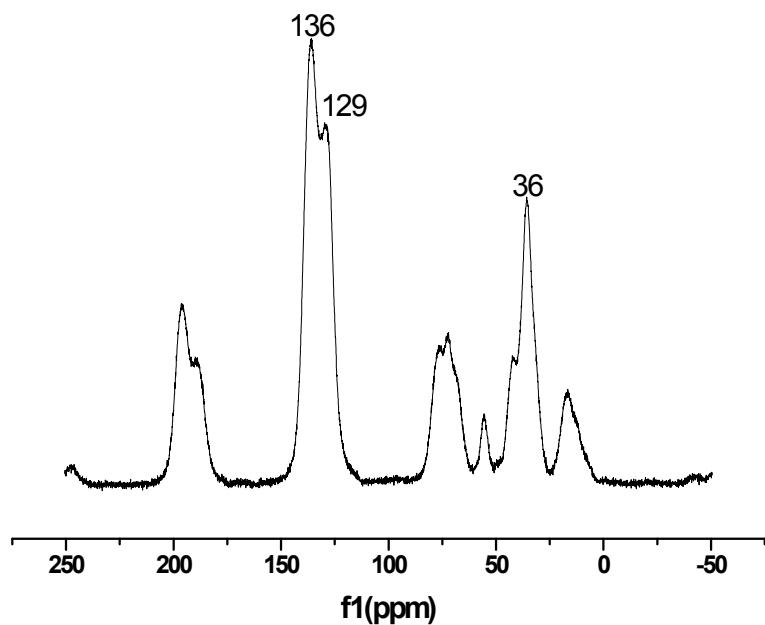

Figure S2. Cross-polarization (CP) ¹³C MAS natural abundance NMR spectrum of ClBE-1.5.

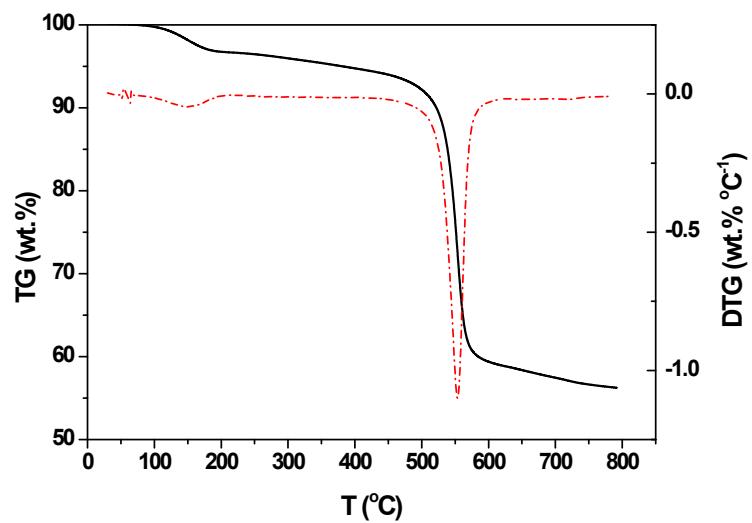

Figure S3. TG and DTG curves for ClBE-1.5.

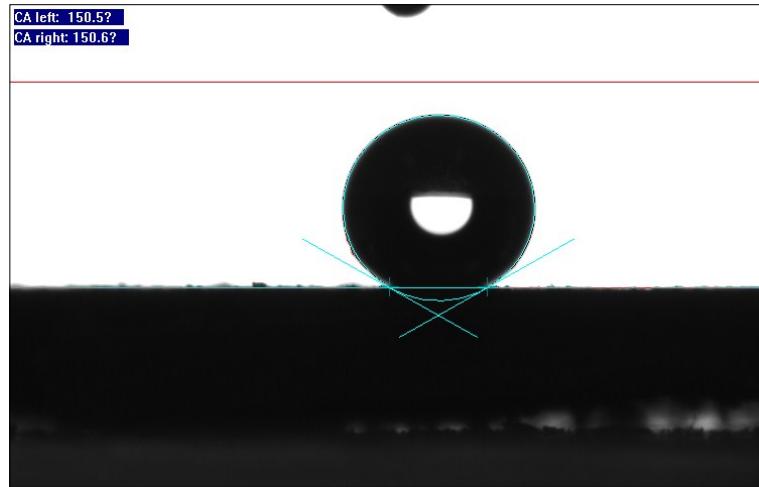

Figure S4. Water contact angle on ClBE-1.5.

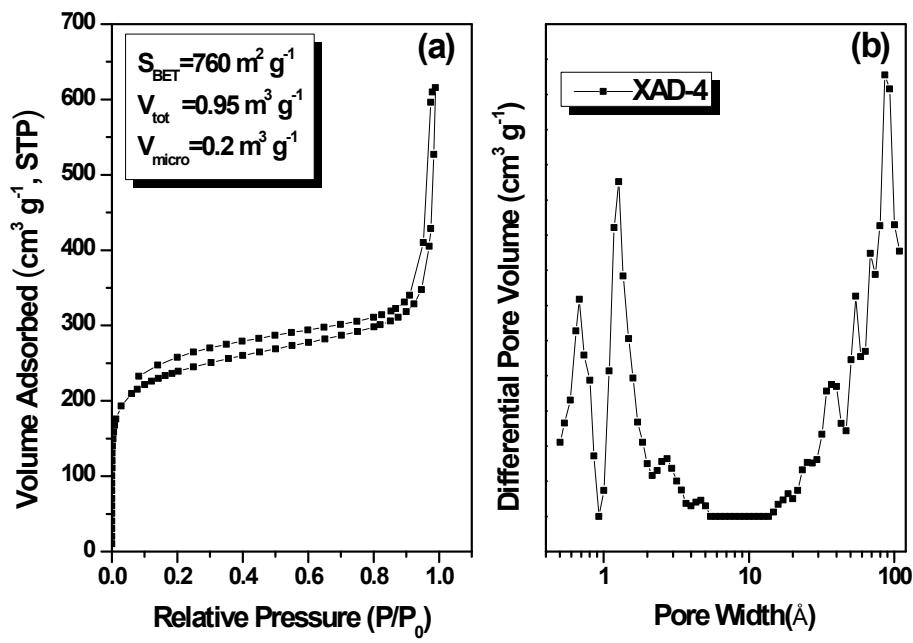

Figure S5. Nitrogen sorption isotherms of XAD-4 (a) and pore size distribution calculated using DFT methods (b).

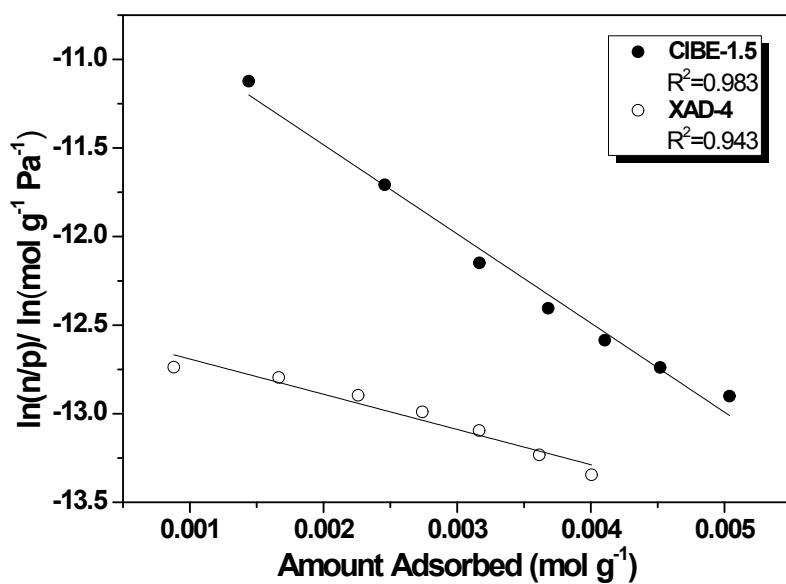

Figure S6. Virial graphs for benzene on ClBE-1.5 and XAD-4 at 25°C.

Table S1. Dynamic adsorption capacities of ClBE-1.5 and XAD-4 and breakthrough characteristics of benzene adsorption calculated from Y-N model

Material	RH=0%			RH=80%			Breakthrough time (min)	Q_{wet}/Q_{dry}
	Q (mmol g^{-1})	τ_0 (min)	R^2	Q (mmol g^{-1})	τ_0 (min)	R^2		
ClBE-1.5	1.91	103.95	0.996	1.86	101.68	0.989	28.18	97%
XAD-4	1.48	80.61	0.985	0.85	44.45	0.997	6.27	57%
