**Figure S1.** SEM images of as-spun Fe(III)/PVP nanofibers

**Figure S2.** SEM (a) and HR-TEM (b, c) images obtained for HEF sample.

**Figure S3.** Kubelka-Munk transformed reflectance spectra of HEF.

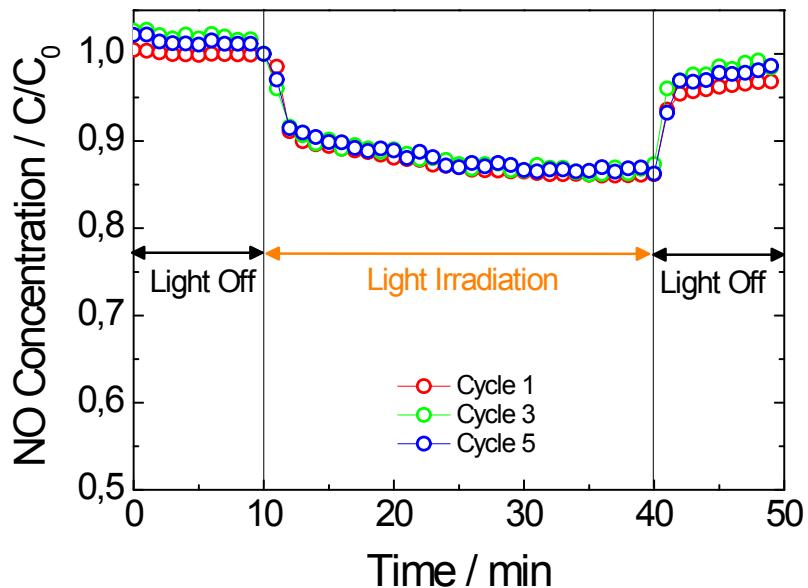

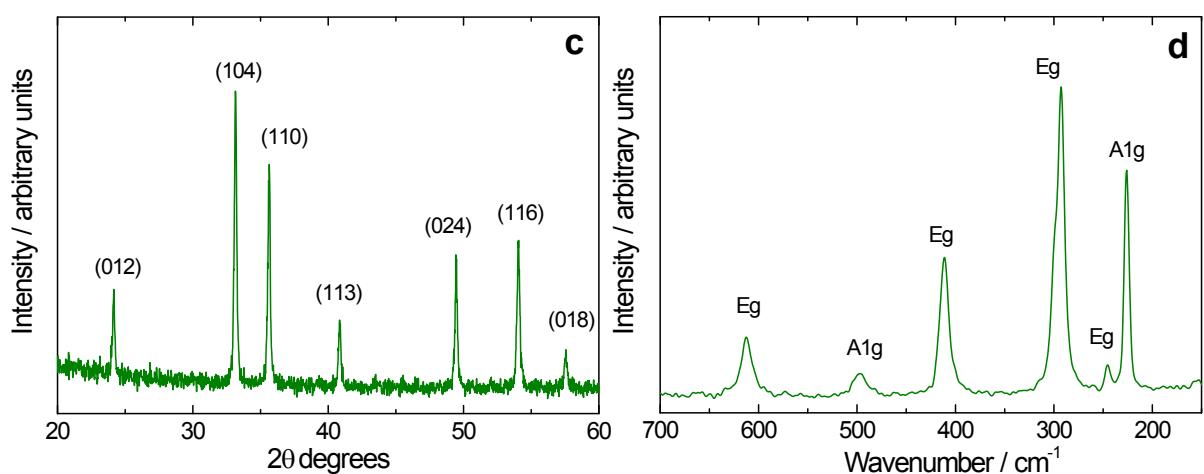

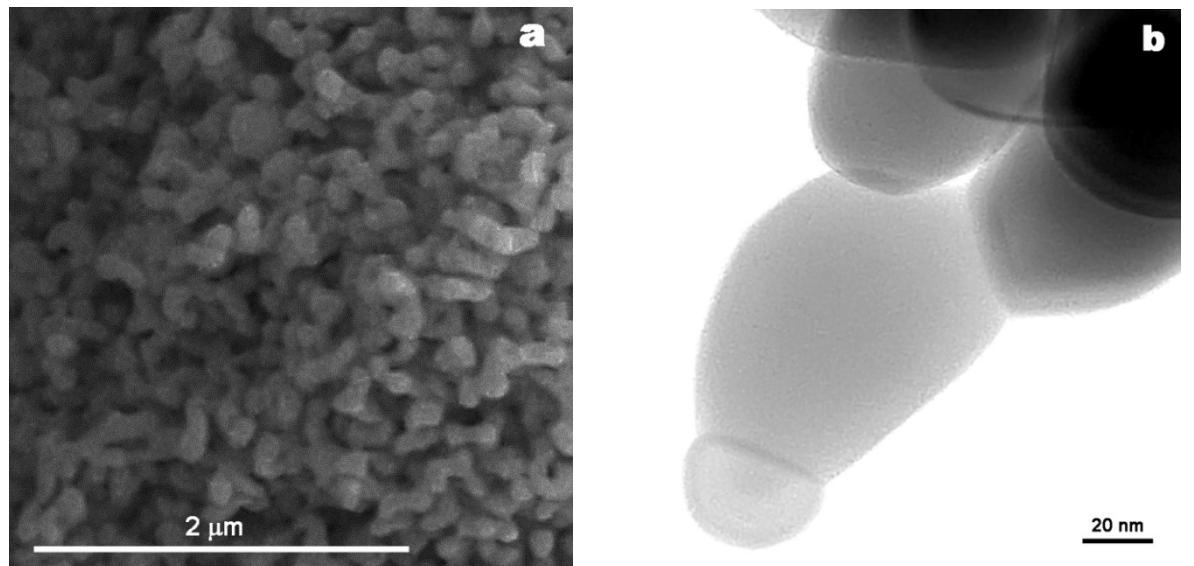

FIGURE S4. Concentration profiles obtained for HEF sample during successive experiments of photochemical degradation of NO gas under UV-vis light irradiation.

Successive additional cycling reactions were performed as preliminary evaluation of photocatalyst reuse. Between experiments, with the aim to eliminate the nitrite/nitrate compounds accumulated on surface, the photocatalyst was washed with distilled water, filtered and dried at 60 °C for 24 h.

**Figure S5.** (a) SEM and (b) TEM images, (c) XRD and (d) Raman spectra of  $\alpha$ -Fe<sub>2</sub>O<sub>3</sub> nano-powders (HNP sample).

**Table 1.** Surface area and porosity parameters for  $\alpha$ -Fe<sub>2</sub>O<sub>3</sub> samples.

Samples	HEF	HNP
<b>Surface area / m<sup>2</sup>·g<sup>-1</sup></b>		
<sup>a</sup> A <sub>BET</sub>	22.13	9.14
<sup>b</sup> A <sub>micropore</sub>	2.19	2.63
<sup>b</sup> A <sub>External</sub>	19.93	6.51
<b>Pore Volume / cm<sup>3</sup>·g<sup>-1</sup></b>		
<sup>c</sup> V <sub>Total</sub>	0.0577	0.0172
<sup>b</sup> V <sub>Micropore</sub>	0.0007	0.0013
<sup>d</sup> V <sub>Mesopore</sub>	0.0570	0.0159
<b>Pore Size / Å</b>		
<sup>e</sup> Pore Width	104.23	75.35

<sup>a</sup> Determined by adsorption of N<sub>2</sub> at 77 K (BET eq. with Am = 0.162 nm<sup>2</sup>).

<sup>b</sup> Determined from the N<sub>2</sub> adsorption isotherm by t-plot method (Harkins and Jura eq.).

<sup>c</sup> Determined from the N<sub>2</sub> adsorption isotherm by taking volume adsorbed at P/P<sub>0</sub> = 0.995.

<sup>d</sup> Determined by V<sub>Total</sub>-V<sub>Microporo</sub>.

<sup>e</sup> Adsorption average pore width (4V/A by BET).
