

Supporting information for
Novel heat and oil-resistant thermoplastic vulcanizates
based on Ethylene-Vinyl Acetate Rubber/Poly(vinylidene
fluoride)

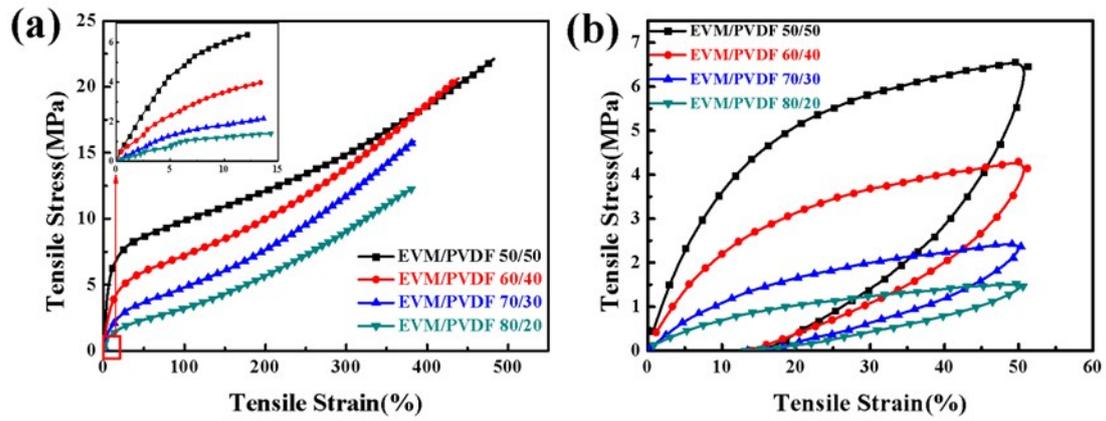

Figure S1. (a) Stress–strain curves and (b) stretching recovery curves of the TPVs based on different ratios of EVM/PVDF.

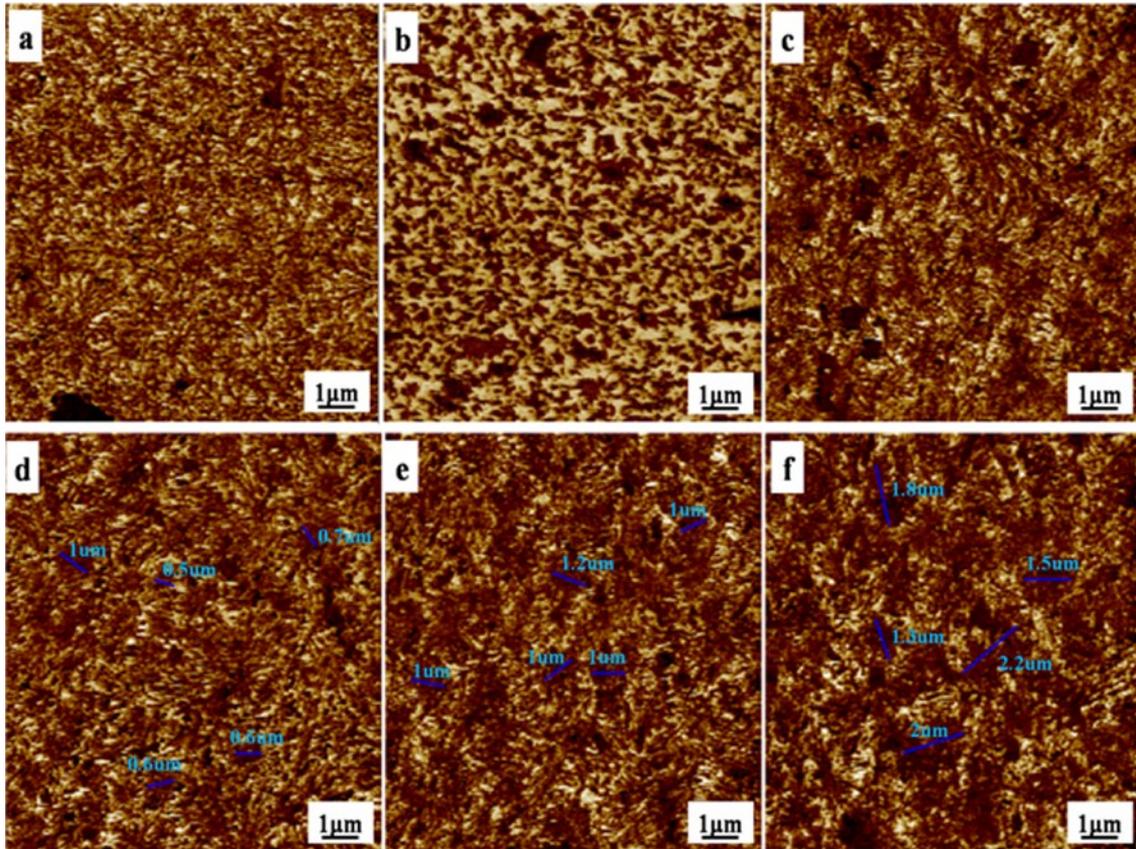

Figure S2. AFM micrographs of EVM/PVDF (65/35) samples (the darker regions represent the EVM phase and the lighter represent the PVDF phase): (a) sample A; (b) sample B; (c) sample C; (d) sample D; (e) sample E; (f) sample F.

Table S1. Change of tensile, elongation at break, mass and volume of the TPVs based on different ratios of EVM/PVDF before and after the oil resistant experiment (72 h @125 °C)

Samples (EVM/PVDF)	Change of tensile strength %	Change of elongation at break %	Change of mass %	Change of volume %
50/50	-17±0.3	-15±0.1	9.9±0.2	14.8±0.2
60/40	-19±0.1	-16±0.2	11.8±0.1	17.4±0.1
70/30	-22±0.1	-21±0.4	15.0±0.2	21.2±0.3
80/20	-29±0.1	-25±0.3	18.1±0.1	24.5±0.1
