Preparation of Q-MMT

Q-MMT and Cu-Q-MMT materials were prepared by a method similar to our previous reported method [7] (Seen in supporting information). Montmorillonite (0.25 g) was dispersed in deionized H₂O (60 mL) and stirred at 70 °C for 1 h to form a suspension. Aqueous solution of Q (20 mL, 22 mmol/L) was slowly added to the suspension within 2 h. Then the mixture was sonicated at 70 °C for 1 h before equilibrated 1(2 h at room temperature. The system was filtered and the filter cake was washed with deionized water until no Br⁻ was detected by AgNO₃ solution. The solid was dried in vacuum at 70 °C for 12 h and grounded into powder which is labelled as Q-MMT.

Preparation of Cu-Q-MMT

Ethanol (5 mL) and deionized water (10 mL) was added to the mixture of CuCl₂ (14.31 mg) and Q-MMT (0.2 g). The suspension was stirred at 50 °C for 12 h before cooled down to room temperature. Aqueous solution of NaBH₄ (5 mL, n (NaBH₄): n (Cu) = 10: 1) was slowly added to the suspension within 2 h. The reaction mixture was filtered and the filter cake was washed with deionized water until no Cl⁻ was detected by AgNO₃ solution. The solid was dried in vacuum at 60 °C for 12 h and grounded into powder to obtain Cu-Q-MMT.

Figure 4. TEM micrographs of the different copper loadings of catalysts and recycled Cu-Q-MMT, Cu loading of catalysts a, b, c, d and e are 0.4 mmol, 1 mmol, 2 mmol, 3 mmol, 4 mmol per gram, respectively, in preparation and f is the recycled Cu-Q-MMT.
