## **1.General Information**

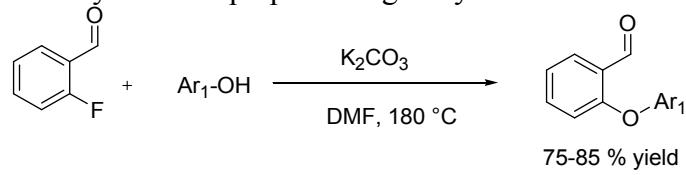

The majority of the chemicals used in this work were commercially available from Merck or Aldrich. CH<sub>3</sub>CN was purchased from Merck with catalog number 114291. It has 99.8% purity and wasn't dried for extra. The starting carbinols **1a-1u** were prepared by Ullmann coupling of 2-fluorobenzaldehyde and substituted phenols and then Grignard reaction of 2-arenoxybenzaldehydes and some arylmagnesium bromides. All substrates were purified by crystallization or column chromatography and were characterized by IR, <sup>1</sup>H-NMR, <sup>13</sup>C-NMR, elementel analysis and GC-MS. All novel pruducts were characterized by IR, <sup>1</sup>H-NMR, <sup>13</sup>C-NMR, elementel analysis and GC-MS. The reactions were monitored by TLC using silica gel plates and the products were purified by flash column chromatography on silica gel (Merck; 230–400 mesh), eluting with hexane-ethyl acetate (v/v 9:1). NMR spectra were recorded at 500 MHz for <sup>1</sup>H and 125 MHz for <sup>13</sup>C using Me<sub>4</sub>Si as the internal standard in CDCl<sub>3</sub>. GC-MS were recorded on Shimadzu/ QP2010 Plus. IR spectra were recorded on a Mattson 1000 spectrometer.

**2.Synthesis of *N*-triflylphosphoramido (3g):** Diphenylphosphochloridate (1.1 mL, 5.3 mmol, 1 equiv.) was dissolved in DCM (20 mL). Triethylamine (5.1 mL, 36.8 mmol, 7 equiv.) was added at 0 °C. DMAP (1.28 g, 10.5 mmol, 2 equiv.) and trifluoromethanesulfonamide TfNH<sub>2</sub> (940 mg, 6.3 mmol, 1.2 equiv.) were added to the reaction mixture at 0 °C. The cold bath was removed and the reaction mixture was stirred for 2 hours at room temperature, then heated at reflux for 1 hour. The conversion of the phosphochloridate was monitored by <sup>31</sup>P NMR spectroscopy: disappearance of the signal for the starting material at 7.2 ppm and appearance of a new singlet at –12.9 ppm. DCM (15 mL) was then added and the organic layer was washed with water (20 mL). The organic layer was washed with hydrochloric acid (37%) until no traces of triethylamine and DMAP were observed in the <sup>1</sup>H NMR spectrum. The organic layer was then dried over Na<sub>2</sub>SO<sub>4</sub>, filtered and the solvent was removed under vacuum. The resulting white solid was dissolved in DCM and cooled to –30 °C to give white crystals 0.89 g, Yield = 60%, m.p. = 93–94 °C.

## **3.General procedure for reduction of the Ullmann coupling:<sup>1</sup>**

To a solution of DMF (10 mL) containing 2- fluorobenzaldehyde (5.0 mmol) and phenol (5.0 mmol) was added K<sub>2</sub>CO<sub>3</sub> (5.0 mmol) and the reaction mixture was stirred for 2 hours at 180 °C under an nitrogen atmosphere. It was cooled to room temperature and after usual workup and concentration, the product was purified over silica gel.

Thus, 2- arenoxybenzaldehydes were prepared in good yields with 75-85% (Scheme 1).

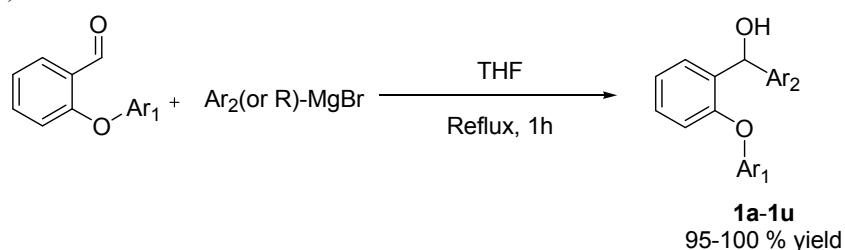

**Scheme 1.** The Ullmann type reaction of 2-fluorobenzaldehyde and hydroxy aryls.

#### 4.General procedure for Grignard reaction:

For grignard solution, to Mg (2 mmol) was added bromo substrates (1.2 mmol) in dry THF and the mixture was heated under reflux and N<sub>2</sub> for 0,5-1 h then cooled to room temperature. 2-arenoxybenzaldehydes (1 mmol) was solved in dry THF and cooled to 0 °C. Then grignard solution was added to aldehyde solution and stirred for 1 hours. The end of the reaction was quenched with saturated NH<sub>4</sub>Cl solution, extracted ethyl acetate 3 times. After usual workup and concentration, the crude was purified over silica gel.

Diarylcarbinol compounds including arenoxy group were obtained with very high yields (95-100%) (Scheme 2).

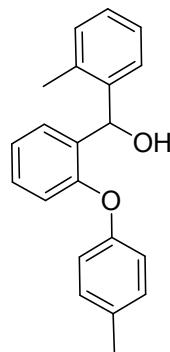

**Scheme 2.** The Grignard reaction of 2-arenoxybenzaldehyde.

#### 5.General procedure for intramolecular Friedel Crafts cyclization:

To a stirred solution of a starting alcohol compound (**1a-1u**) (0.1 mmol) in dry CH<sub>3</sub>CN (2.5 ml) was added *N*-triflylphosphoramido (**3g**) (10 mol %) at room temperature and the reaction was stirred for 15 min. After the completion of the reaction as observed on TLC, the mixture was concentrated in vacuo and was extracted with ethylacetate. After usual reaction workup and concentration, the product was charged on silica gel.
