

Spiral formation at microscale by μ -pyro-electrospinning

L. Mecozzi¹, O. Gennari¹, R. Rega¹, S. Grilli^{1}, S. Bhowmick², M.A. Gioffrè², G. Coppola², P. Ferraro¹*

¹Institute of Applied Sciences & Intelligent Systems of the National Council of Research (CNR-ISASI)
Via Campi Flegrei 34, 80078 Pozzuoli (NA), Italy

²Institute of Microelectronics and Microsystems of the National Council of Research (CNR-IMM)
Via P. Castellino 111, 80131 Napoli, Italy

Supplementary Movies

The Supplementary Movies 1,2,3 show the side view of the typical fibre spiralling during μ -PES in case of 2 %, 15 % and 9 % PMMA in anisole (wt/wt), respectively. The movies were slowed down for better visualization.
