Unraveling the Dual Character of Sulfur Atoms in a series of Hg(II)

coordination polymers containing bis(4-pyridyl)disulfide

Paris-Sud, Université Paris-Saclay, 1, av. de la Terrasse, 91198 Gif-sur-Yvette, France

Experimental Section

All starting materials, including 4,4'-Dithiodipyridine ligand, HgX₂ salts were purchased from Sigma-Aldrich and used as received. FT-IR and ATR-FT-IR spectra were recorded using Thermo Nicolet IR 100 FT-IR. Melting points were measured on an Electrothermal 9100 apparatus. Ultrasonic generator was carried out on a TECNO-GAZ, S.p.A., Tecna 6, input: 50–60 Hz/305. The samples were also characterized by field emission scanning electron microscope (FE-SEM) SIGMA ZEISS and TESCAN MIRA with gold coating. The thermal behavior was measured with a PL-STA 1500 apparatus with the rate of 10°C.min⁻¹ in a static atmosphere of argon. X-ray powder diffraction (XRD) measurements were performed using a Philips X'pert diffractometer with mono chromated Cu-K α radiation.

Single-Crystal Diffraction

X-ray diffraction experiments were carried out at the MoKa wavelength at ambient temperature (except **3** at 173 K) using a Rigaku XtaLabPro diffractometer. A MicroMax-003 microfocus sealed tube generator coupled to a double-bounce confocal Max-Flux® multilayer optic was employed, and Bragg peak measurement was performed by an HPAD Pilatus 200K detector. The three structures were solved by phasing intrinsic methods (SHELXT),¹ and refined by full matrix least squares on F^2 using SHELXL-2014/7.0.² Anisotropic thermal parameters were used for all non-hydrogen atoms and aromatic H atoms, visible in residual maps, were refined with riding coordinates and with U_{eq} values set at $1.2U_{eq}$ (C atom). **2** turned out to be non-merohedral twinned as detected by the TwinRotMat macro in PLATON.³ The two domains were rotated by only 0.4° around the *c* vector, giving fractional contributions of 0.82 and 0.18, which significantly improved the final R-factors.

Figure S1. Stacked TG curves of compounds 1, 2 and 3.

Figure S2. FE-SEM images of single crystals of compounds 1 (a), 2 (b) and 3 (c) prepared using layering technique and compounds 1 (d), 2 (e) and 3 (f) prepared using ultransonic irradiation

(d)

Figure S3. FT-IR spectra (a) ATR-IR spectra (b) and comparison of FT-IR and ATR-IR spectra of compounds **1-3** prepared by ultrasonic irradiation. The FT-IR spectra of the compounds generated by the sonochemical method and of the layering technique are indistinguishable.

(b)

Figure S4. Simulated and experimental PXRD patterns of compounds 1 (a), 2 (b) and 3 (c) prepared by layering technique and ultrasonic irradiation

Figure S5. Predicted crystal morphologies of complexes 1 (a), 2 (b) and 3 (c) and their packing along the [110] plane.

Figure S6. Portion of the structure of the coordination compounds **1** (a), **2** (b) and **3** (c) showing the coordination geometry around the Hg(II). Symmetry codes: (a) i at 1-x, y, 1.5-z; ii at 1-x, y, $\frac{1}{2}$ -z (b) i at 1-x, y, 1.5-z; ii at 1-x, y, $\frac{1}{2}$ -z (c) i at 1-x, y, $\frac{1}{2}$ -z; ii at 1-x, y, 1.5-z. ORTEP diagrams were drawn by 30% probability.

Figure S7. Relative contributions of various non-covalent contacts to the Hirshfeld surface area in compounds 1-3.

Figure S8. CSD searching query for analyzing $S \cdots X$ -M interaction (search criteria: M: any metals; Any: any atoms; Angle 1-3 in the range of 50-180° and $S \cdots X$ interaction distances of 3.2-3.6, 3.3-3.7 and 3.3-3.85 for Cl, Br and I, respectively). $S \cdots Cl$ -M (1147 hits), $S \cdots Br$ -M (307 hits) and $S \cdots I$ -M (212 hits) found. The CSD searches have been done using Cambridge Structural Database, version 5.37 (Last update may 2016); CCDC: Cambridge, U.K.

(b)

(c)

Figure S9. Histogram of the S…X-M chalcogen bond distance, histogram of the S…X-M chalcogen bond angle and scatter-plot of chalcogen bond distance versus the S…X-M angle, where X is Cl (a), Br (b) and I (c), respectively. Reported data were obtained from CSD, version 2015.

(a)

Figure S10. Scatter-plot of the S \cdots X-M chalcogen bond distance and angle 1, 2 and 3 (defined in Figure S5), where X is Cl (a), Br (b) and I (c), respectively. Reported data were obtained from CSD, version 2015.
