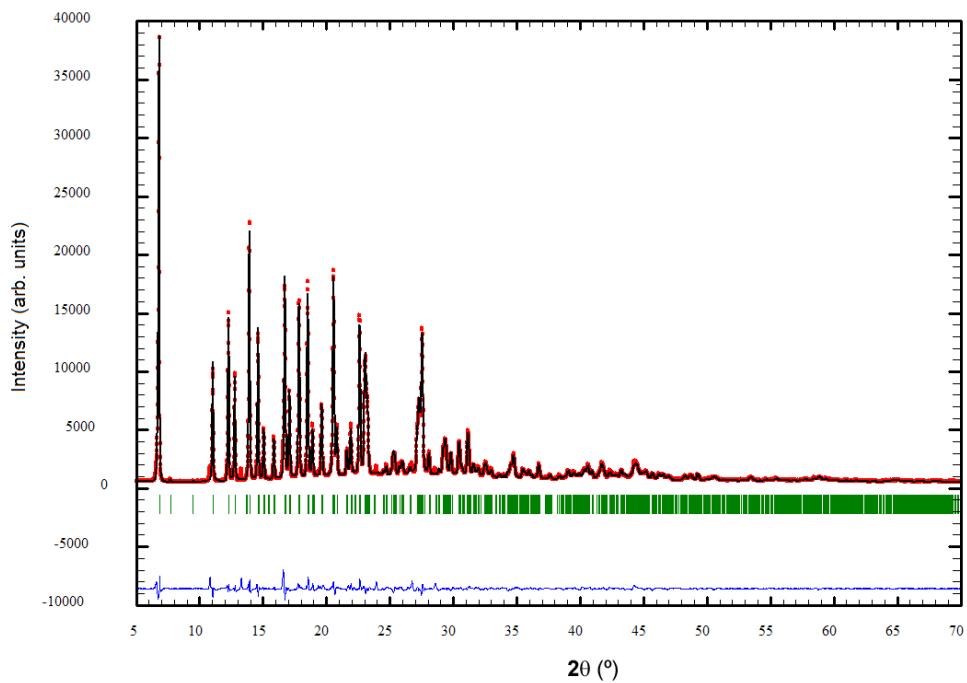

Figure S1. Results of the final Rietveld refinement of the griseofulvin-4-tert-butyl phenol cocrystal using $\text{CuK}\alpha$ radiation ($\lambda = 1.5418 \text{ \AA}$). The plot shows the experimental powder XRD profile (red+marks), the calculated powder XRD profile (black solid line), and the difference profile (blue, lower line). Tick marks indicate peak positions.

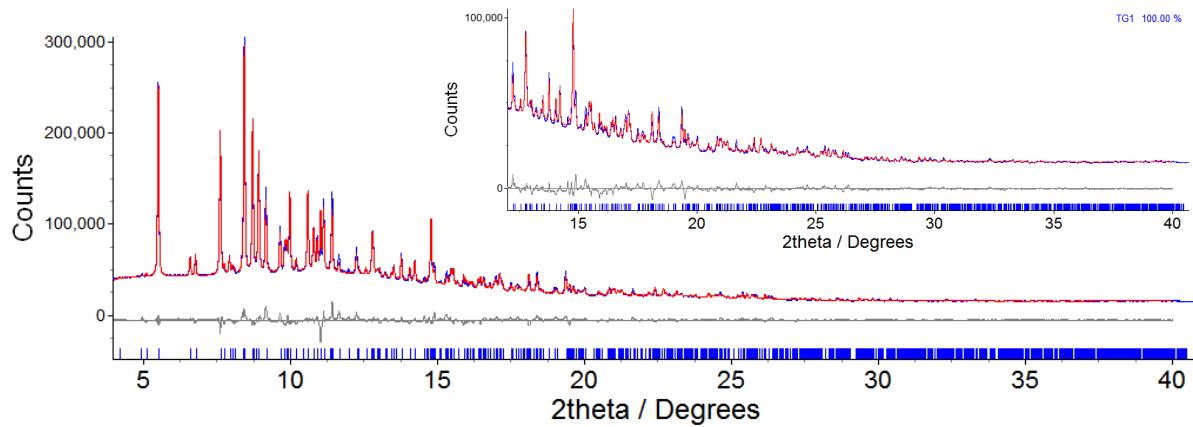

Figure S2. Results of the final Rietveld refinement of the spironolactone-phenol cocrystal using synchrotron X-ray radiation ($\lambda = 0.82665 \text{ \AA}$): observed (blue) and calculated (red) profiles and difference plot [$I_{\text{obs}} - I_{\text{calc}}$] (grey) of the Rietveld refinement (2θ range $4.0 - 40^\circ$). The blue tick marks below the patterns give the positions of the Bragg reflections.

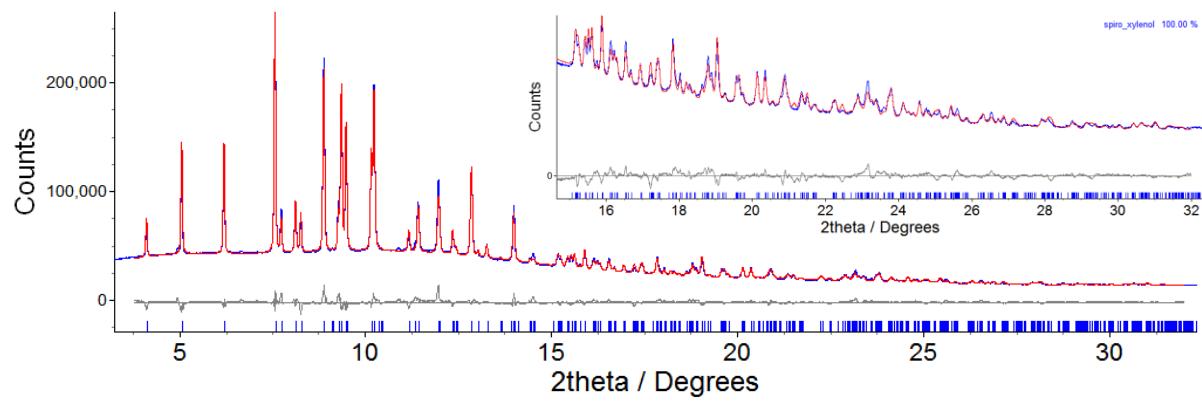

Figure S3. Results of the final Rietveld refinement of the spironolactone-phenol cocrystal using synchrotron X-ray radiation ($\lambda = 0.82665 \text{ \AA}$): observed (blue) and calculated (red) profiles and difference plot [$I_{\text{obs}} - I_{\text{calc}}$] (grey) of the Rietveld refinement (2 θ range 4.0 – 32 °).
