

Voltammetric and spectroscopic study of ferrocene and hexacyanoferrate and the suitability of their redox couples as internal standards in ionic liquids

Ninett Frenzel, Jennifer Hartley and Gero Frisch

Supporting information

Ionic liquids and deep eutectic solvents used

name	abbreviation	ionic liquids	
		cation	anion
1-ethyl-3-methyl-imidazolium acetate	[C ₂ mim][ac]		
1-ethyl-3-methyl-imidazolium tetrafluoroborate	[C ₂ mim][BF ₄]		
1-hexyl-3-methyl-imidazolium chloride	[C ₆ mim][Cl]		Cl ⁻
1-butyl-3-methyl-imidazolium dicyanamide	[C ₄ mim][DCN]		
1-ethyl-3-methyl-imidazolium diethylphosphate	[C ₂ mim][DEP]		
1-ethyl-3-methyl-imidazolium ethylsulfate	[C ₂ mim][EtSO ₄]	<p>R = ethyl ≡ [C₂mim] R = butyl ≡ [C₄mim] R = hexyl ≡ [C₆mim]</p>	
1-butyl-3-methyl-imidazolium hydrogensulfate	[C ₄ mim][HSO ₄]		
1-ethyl-3-methyl-imidazolium bis(trifluoromethylsulfonyl)-imide	[C ₂ mim][NTf ₂]		
1-ethyl-3-methyl-imidazolium triflate	[C ₂ mim][OTf]		
1-butyl-3-methyl-imidazolium hexafluorophosphate	[C ₄ mim][PF ₆]		
1-ethyl-3-methyl-imidazolium thiocyanate	[C ₂ mim][SCN]		S ⁻ -C≡N
ethylammonium nitrate	[EtA][NO ₃]		

name	Deep Eutectic Solvents	
	quaternary ammonium salt	hydrogen-bond donor
Ethaline		
Propaline		
Glyceline		

Electrochemical parameters modelled with DigiElch for the formal potential ΔE vs Ag-wire, charge transfer coefficient α , rate constant k_s , diffusion coefficient D and standard deviation of the fit S , and calculated values for the peak potential separation ΔE_p and peak current ratio I_{pa}/I_{pc} for samples of 10 mM ferrocene in various ILs, on a Pt, GC and Au working electrode and water content in wt% for each solution after dissolving process determined by Karl-Fisher titration.

Ionic liquid		$\Delta E / V$ (DigiElch)	$\Delta E_p / mV$ (from 5 to 100 mV s ⁻¹)	α	I_{pa}/I_{pc} (from 5 to 100 mV s ⁻¹)	$k_s / cm\ s^{-1} \cdot 10^{-4}$	$D / cm^2\ s^{-1} \cdot 10^{-8}$ (DigiElch)	$S / \%$	$H_2O\ content / wt\%$
