## **Supplementary Figures**

Figure S1 TEM image of LPC micelles at 2 mM (>CMC). Scale: 10 nm.

**Figure S2** Normalized far UV circular dichroism spectra of IAPP (25  $\mu$ M) in the presence of LPC above and below its critical micelle point (CMC) over 24 h.

**Figure S3** The IAPP amyloid fibril model from by two u-shaped protofibrils. Each peptide in the fibril is shown as cartoon with sidechains in stick representation.
