

# Electronic Supplementary Information (ESI) for:

## **Formulation and Catalytic Performance of MOF-derived Fe@C/Al composites for High-Temperature Fischer-Tropsch Synthesis**

Lide Oar-Arteta, María José Valero-Romero, Tim Wezendonk, Freek Kapteijn and Jorge Gascon

### **Metal loading in the samples calculated from TGA in air**

$$\frac{Fe_2O_3}{Al_2O_3} = \frac{x \text{ g Fe-BTC} \cdot \frac{0.2 \text{ g Fe}}{\text{g Fe-BTC}} \cdot \frac{1 \text{ mol Fe}}{55.845 \text{ g Fe}} \cdot \frac{1 \text{ mol Fe}_2O_3}{2 \text{ mol Fe}} \cdot \frac{159.7 \text{ g Fe}_2O_3}{1 \text{ mol Fe}_2O_3}}{(1-x) \text{ g AlOOH} \cdot \frac{1 \text{ mol AlOOH}}{60 \text{ g AlOOH}} \cdot \frac{1 \text{ mol Al}_2O_3}{2 \text{ mol AlOOH}} \cdot \frac{102 \text{ g Al}_2O_3}{1 \text{ mol Al}_2O_3}} \quad (S1)$$

$$W_{Fe (Fe-BTC-500C)} [mg] = \frac{x \text{ mg Fe}_2O_3}{159.69 \frac{\text{g}}{\text{mol}}} \cdot \frac{2 \text{ mol Fe}}{\text{mol Fe}_2O_3} \cdot \frac{55.845 \text{ g}}{\text{mol Fe}} \quad (S2)$$

$$W_{Al (AlOOH-500C)} [mg] = \frac{x \text{ mg Al}_2O_3}{101.96 \frac{\text{g}}{\text{mol}}} \cdot \frac{2 \text{ mol Al}}{\text{mol Al}_2O_3} \cdot \frac{26.98 \text{ g}}{\text{mol Al}} \quad (S3)$$

**Table S1.** Fe loading in the different catalysts

| Fe-BTC/AlOOH<br>mass ratio | Initial wt%<br>Fe | Catalyst<br>wt.% Fe | Sample<br>Designation | Increase in<br>Fe content<br>after<br>pyrolysis, % |
|----------------------------|-------------------|---------------------|-----------------------|----------------------------------------------------|
| 100/0                      | 22                | 38                  | 38Fe@C                | 42                                                 |
| 90/10                      | 21                | 33                  | 33Fe@C/Al             | 36                                                 |
| 70/30                      | 17                | 25                  | 25Fe@C/Al             | 32                                                 |
| 50/50                      | 10                | 15                  | 15Fe@C/Al             | 33                                                 |

**Table S2.** Fe/Fe<sub>3</sub>O<sub>4</sub> ratios calculated according to the Rietveld method and crystallite sizes of Al<sub>2</sub>O<sub>3</sub>, Fe<sub>3</sub>O<sub>4</sub>, and Fe according to the Scherrer equation for the pure 38Fe@C and the composites.

| Material                       | Fe/Fe <sub>3</sub> O <sub>4</sub> | Particle size /nm              |                                |      |
|--------------------------------|-----------------------------------|--------------------------------|--------------------------------|------|
|                                |                                   | Al <sub>2</sub> O <sub>3</sub> | Fe <sub>3</sub> O <sub>4</sub> | Fe   |
| 38Fe@C                         | 0.07                              | n.a.                           | 5.6                            | 3.8  |
| 33Fe@C/Al                      | 0.26                              | n.d.                           | 5.2                            | 11   |
