Supporting Information Figure

Fig. S1. The BET surface area calculated from nitrogen adsorption-desorption isotherms. (a) $g-C_3N_4$ bulk, (b) $g-C_3N_4$ nanosheets, (c) $1at\%B-g-C_3N_4$ bulk, and (d) $1at\%B-g-C_3N_4$ nanosheets.

Fig. S2. Mott-Schottky plot of 1at%B-g-C₃N₄ nanosheets in 0.2 M Na₂SO₄ aqueous solution. The Flat band potential of 1at.%B-g-C₃N₄ nanosheets is determined to be 2.05 V vs. Ag/AgCl at pH = 6.6, which correspond to 2.05 V vs. NHE at pH= 0.
