1. **Figure S1.** Powder X-ray diffraction patterns of  $A_2[GeF_2(HPO_4)_2]$  ( $A = Na, K, Rb, NH_4$ , and  $Cs$ ), black patterns: observed data, red patterns: simulated data.
2. **Figure S2.** SEM and EDX results showing the crystal morphologies and chemical compositions of  $A_2[GeF_2(HPO_4)_2]$  ( $A = Na, K, Rb, NH_4$ , and  $Cs$ )
3. **Figure S3.** SEM images showing the cleavages of the single crystals of  $A_2[GeF_2(HPO_4)_2]$  ( $A = Na, K, Rb, NH_4$ , and  $Cs$ ) after pressed.
4. **Figure S4.** The hydrogen bonds between the neighboring chains or within the layers in the crystal structures of  $A_2[GeF_2(HPO_4)_2]$  ( $A = Na, K, NH_4$ , and  $Cs$ ).
5. **Figure S5.** TG and DTG curves of  $A_2[GeF_2(HPO_4)_2]$  ( $A = Na, K, Rb, NH_4$ , and  $Cs$ ).
6. **Figure S6.** Differential scanning calorimetry (DSC) curves of  $Cs_2[GeF_2(HPO_4)_2]$  in the temperature range from 133 K to 298 K. Black curve shows the cooling process, red curve showed the cooling process.
7. **Table S1.** Details of the optimized reaction conditions for the five title compounds
8. **Table S2.** Bond Valence Sums of the atoms in  $A_2[GeF_2(HPO_4)_2]$  ( $A = Na, K, Rb, NH_4$ , and  $Cs$ ).

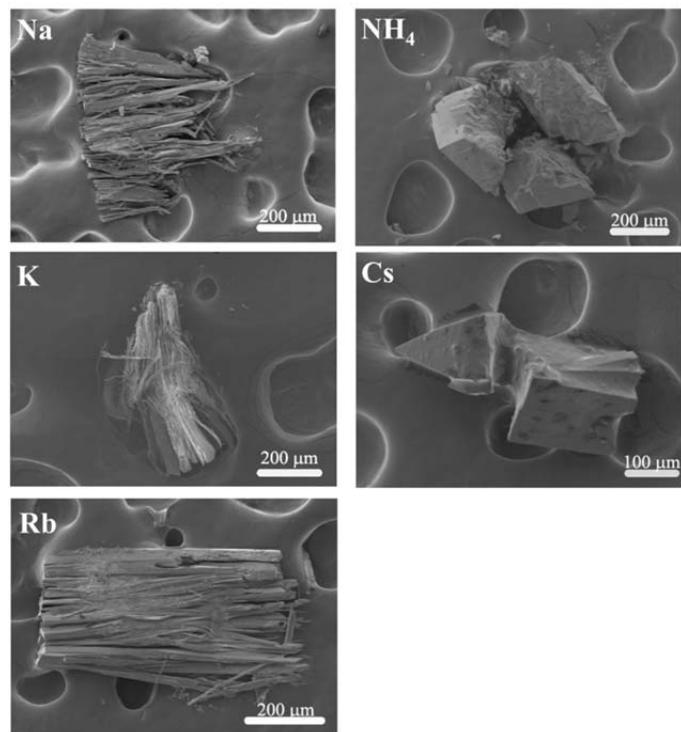

**Figure S1.** Powder X-ray diffraction patterns of  $A_2[GeF_2(HPO_4)_2]$  ( $A = \text{Na, K, Rb, NH}_4$ , and  $\text{Cs}$ ), black patterns: observed data, red patterns: simulated data.  $\text{Cu K}\alpha$  radiation. Note that the intensity difference between the experimental and theoretical peaks for the  $\text{K}$  and  $\text{Rb}$  compounds could be caused by the preferential orientation of crystallites.

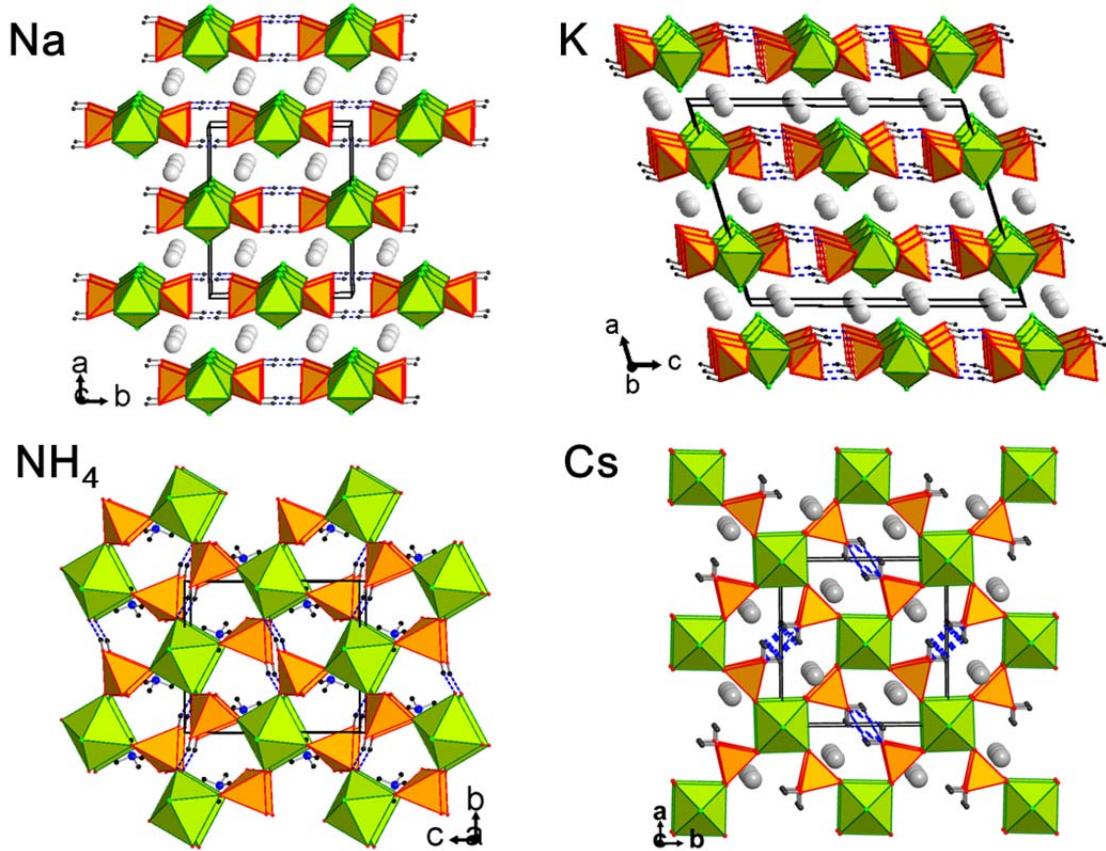

**Figure S2.** SEM and EDX results showing the crystal morphologies and chemical compositions of  $A_2[\text{GeF}_2(\text{HPO}_4)_2]$  ( $A = \text{Na}, \text{K}, \text{Rb}, \text{NH}_4$ , and  $\text{Cs}$ ).

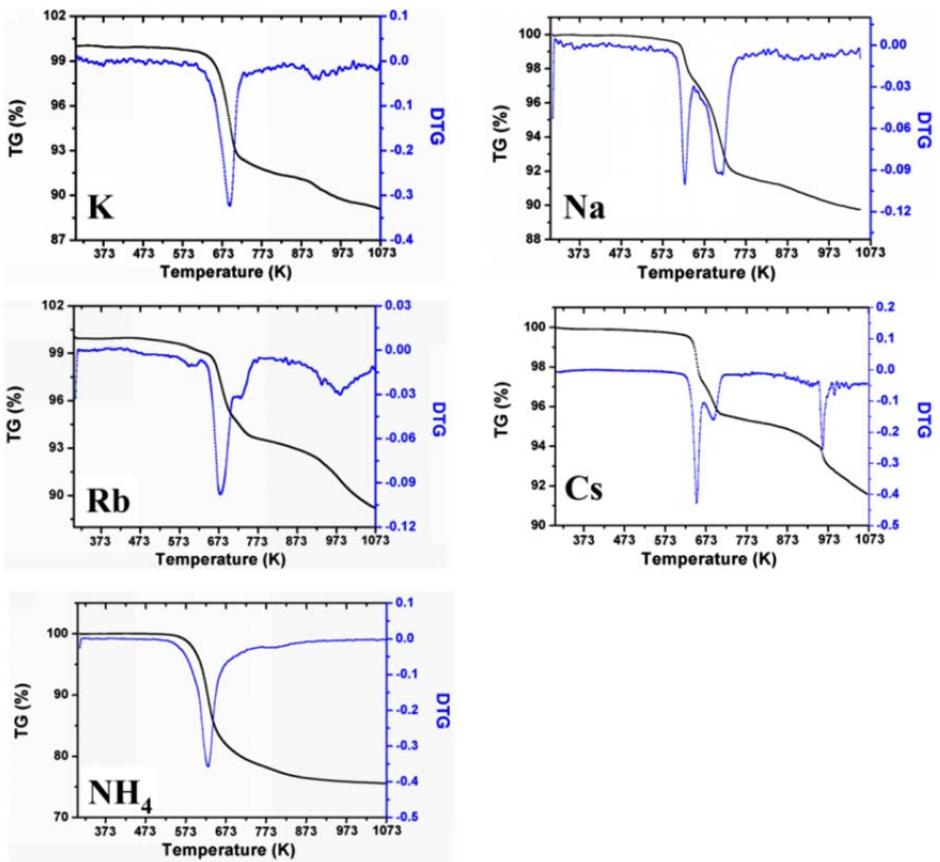

The morphologies and crystal sizes of the single crystals of  $A_2[\text{GeF}_2(\text{HPO}_4)_2]$  ( $A = \text{Na}, \text{K}, \text{Rb}, \text{NH}_4$ , and  $\text{Cs}$ ) are shown in Figure S2. Energy dispersive X-ray spectra confirm the presence of N/K/Na/Rb/Cs, Ge, P, O and F elements in the title compounds.

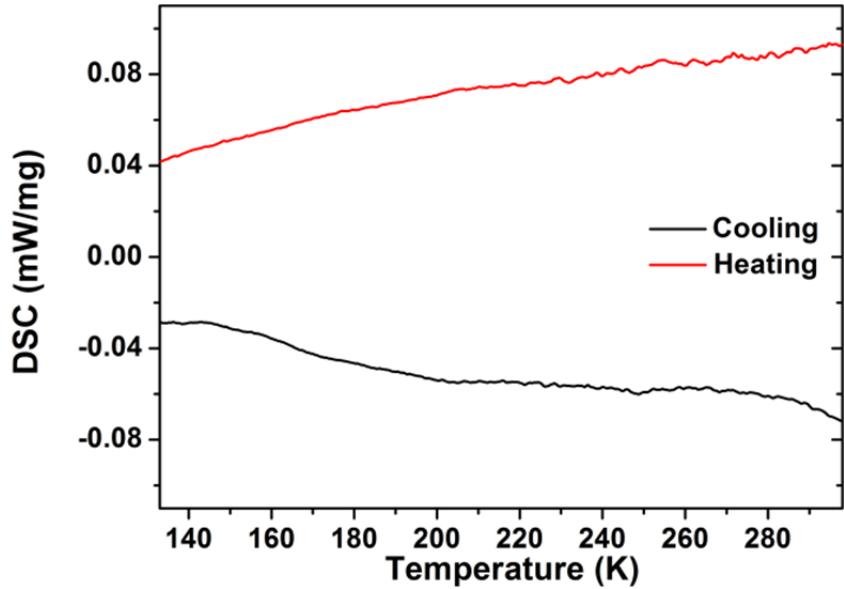

**Figure S3.** SEM images showing the cleavages of the single crystals of  $A_2[GeF_2(HPO_4)_2]$  ( $A = Na, K, Rb, NH_4$ , and  $Cs$ ) after compression.  $A_2[GeF_2(HPO_4)_2]$  ( $A = Na, K, Rb$ ) have perfect cleavage behavior consistent with their chain-like structures, whereas  $A_2[GeF_2(HPO_4)_2]$  ( $A = NH_4$  and  $Cs$ ) have only basal cleavages with their layered structures.

**Figure S4.** The hydrogen bonds between the neighboring chains or within the layers in the crystal structures of  $A_2[GeF_2(HPO_4)_2]$  ( $A = \text{Na}, \text{K}, \text{NH}_4$ , and  $\text{Cs}$ ).

**Figure S5.** TG and DTG curves of  $A_2[GeF_2(HPO_4)_2]$  ( $A = Na, K, Rb, NH_4$ , and  $Cs$ ).

**Figure S6.** Differential scanning calorimetry (DSC) curves of  $Cs_2[GeF_2(HPO_4)_2]$  in the temperature range from 133 K to 298 K. Black curve shows the cooling process, red curve showed the heating process.
