

Supplementary data. Effects of echinacoside (2.5, 5 mg/kg) or donepezil (0.75 mg/kg) on the locomotor activity including movement time (A), movement length (B) and mean velocity (C), and in A β 1-42-infused rats. Columns indicate means \pm SEM (N=6). The mean values which share the same superscript symbol(s) are not significant different.
