**Figure S1.** Size distribution for the Au nanoparticles (NP) synthesized in the laboratory following the method described in section 2.2, as derived from Transmission Electron Microscopy (TEM) images. A total amount of 758 individual Au NPs were counted for drawing the figure and calculating the mean diameter ( $\mu=21.0 \pm 5.8$  nm).

**Figure S2.** TEM image of a set of Au NPs synthesized in the laboratory following the method described in section 2.2.
