Figure S1 A photograph of the no-DDAB (left) and DDAB-modified perovskite NCs (right) under daylight; both had been exposed to air for one month. Some yellow precipitation was seen from the left solution, while the right one remained clear, indicating a better colloidal stability for the DDAB-modified NC solution.

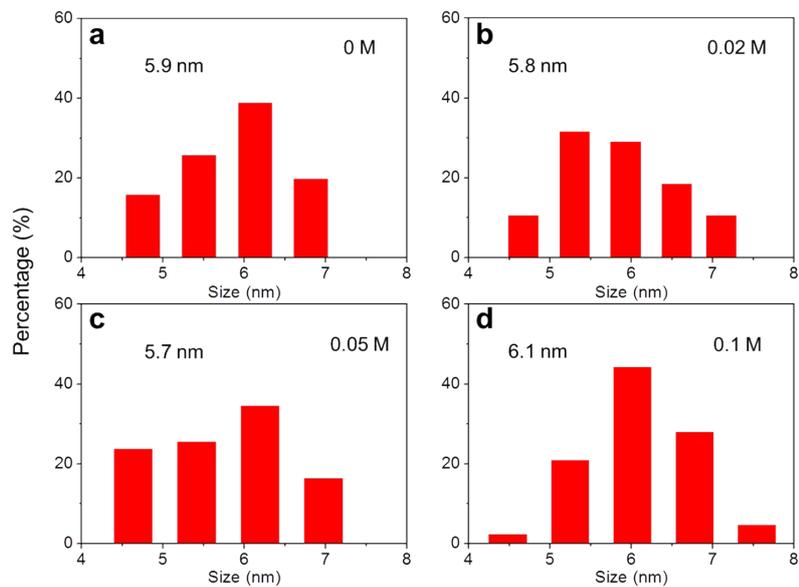

Figure S2 The size distributions of NCs according to the TEM images in Figure 2.

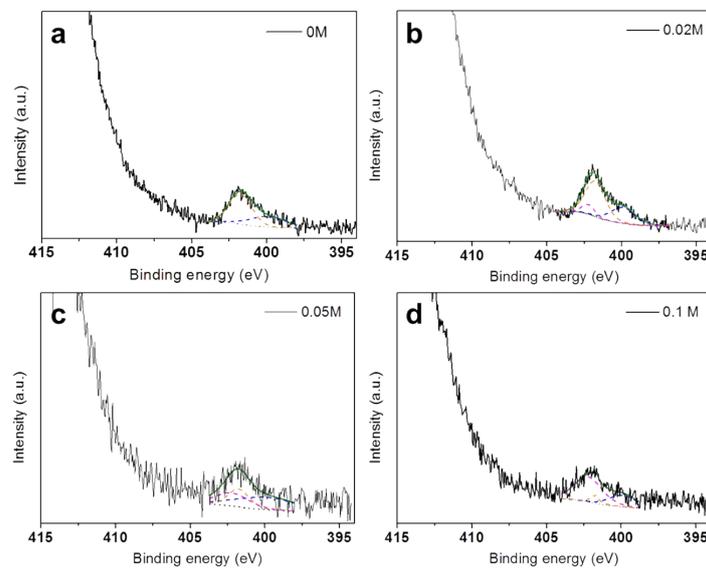

Figure S3 XPS spectra corresponding to N 1s peak of perovskite films from samples 1-4 (a)-(d).

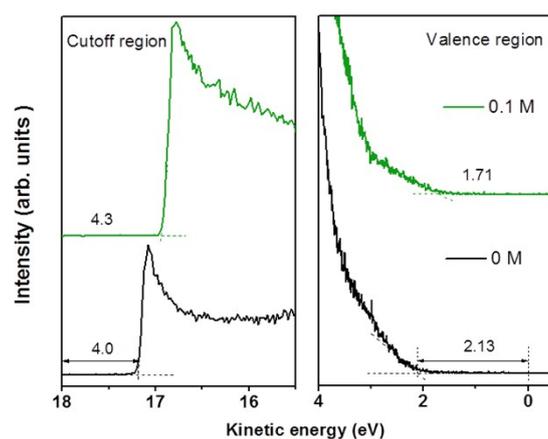

Figure S4 UPS spectra of the no-DDAB (black lines) and 0.1 M DDAB NCs (green lines).

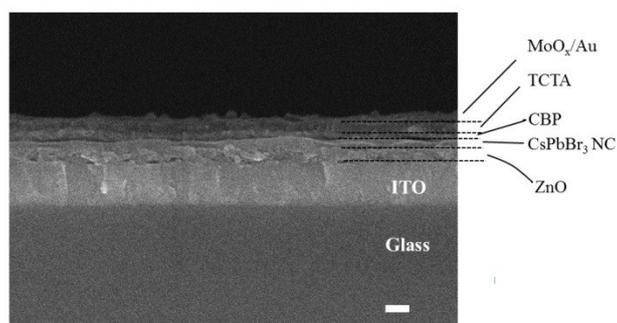

Figure S5 Cross-section SEM image of CsPbBr₃ NC-LEDs. The scale bar represents 100 nm.

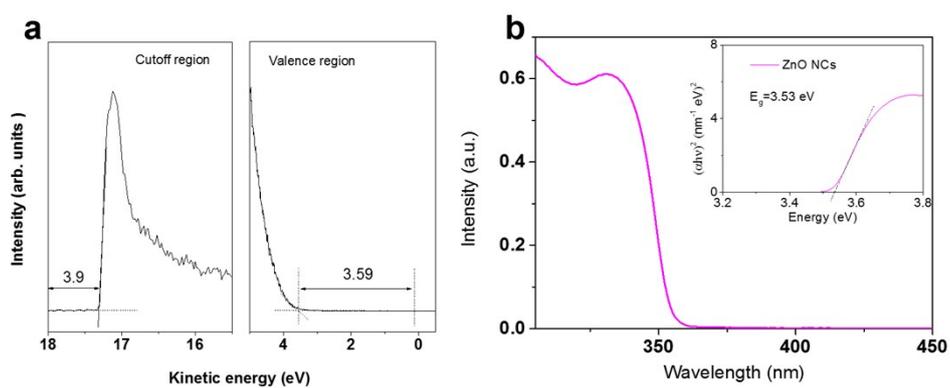

Figure S6 (a) UPS spectra of ZnO NCs. (b) Absorption of ZnO NC solution, with an inset of Tauc plot converted from absorption spectrum for bandgap estimation.
