## 1. Details of Calculations

All the DFT calculations were performed using Gaussian 09 program package.<sup>[1]</sup> The optimization and frequency calculation of the minima and transition states were performed at B3LYP/6-31g(d) level. Frequency calculations were used to verify if the real minima or transition states were obtained and to produce thermal corrections to Gibbs free energy. IRC calculations were performed at the same level of theory to confirm the calculated transition states connect the correct reactants and products. The single point energies based on the optimized structures were calculated at M06-2x/6-311++g(d,p) level.

### 3. Intrinsic reaction coordinate (IRC) analysis

Surprisingly, the IRC analyses of **TS2-Re** converged at **C-endo** rather than **C-exo** (see Figures SI4, SI8, SI12, SI16, and SI20). One of the reviewers thought that during the IRC the molecule was jumping off to a different part of PES, and also suggested that smaller steps for IRC might be helpful. During the revision of the manuscript, we met some difficulties in calculating the IRC analysis of **TS2-Re**. If we set the default stepsize as 5 or 10, the IRC calculation would normally terminate only after several steps. We have tried to use "calcall" in the command line with default stepsize, but the calculation also normally terminated only after several steps. When we set the stepsize as 20, the IRC calculations of the five **TS2-Re** transition states (Figures SI4, SI8, SI12, SI16, and SI20) all converged at **C-endo**. However, the *forward calculations* led to the correct products **8**. The *backward calculations* showed that the energy decreased very slowly and did not converge to **C-exo**. The final structures in the backward calculations seemed to be the structures between **C-exo** and **C-endo**. Further optimization of these final structures led to **C-endo**. We thought there might be transition states between **C-exo** and **C-endo**, but we could not locate it. The backward PES from **TS2-Re** to **C-exo** were more complex.
