**Fig. S1.** (a) The structure of MIL-88B, demonstrating the molecular structure and chemical composition of Fe-MOF; (b) XRD pattern of  $\text{Fe}_3\text{O}_4/\text{C}$ -730-3h nanocomposites at carbonization temperature of 730 °C for 3 h, demonstrating the appearance of Fe phase as the carbonization temperature above 730 °C.

**Fig. S2.** Low- and high-magnification SEM images of Fe<sub>3</sub>O<sub>4</sub>/C-700-3h nanocomposites.

**Fig. S3.** (a) HRTEM image of  $\text{FeF}_3 \cdot 3\text{H}_2\text{O}/\text{C}-700-3\text{h}$  nanocomposites, showing the distribution of iron fluoride particles in the carbon framework and crystallization state of graphitized carbon; (b) TGA curve of the  $\text{FeF}_3/\text{C}-700-3\text{h}$  nanocomposites, confirming the carbon content of the sample; (c,d) XPS spectra of the  $\text{FeF}_3/\text{C}-700-3\text{h}$  nanocomposites, demonstrating the component of amorphous iron fluoride.

**Fig. S4.** (a) Galvanostatic charge/discharge voltage profile at various current densities from 15 mA g<sup>-1</sup> to 1500 mA g<sup>-1</sup>; (b) charge/discharge voltage profile of the FeF<sub>3</sub>/C nanocomposites at various carbonization conditions: FeF<sub>3</sub>/C-500-3h from the precursor of 500 °C carbonization for 3h, FeF<sub>3</sub>/C-600-3h from the precursor of 600 °C carbonization for 3 h, FeF<sub>3</sub>/C-700-3h from the precursor of 700 °C carbonization for 3 h, FeF<sub>3</sub>/C-700-5h from the precursor of 700 °C carbonization for 5 h.

**Fig. S5.** Electrochemical performances of the FeF<sub>3</sub>/C nanocomposites at various carbonization conditions: (a) discharge/charge rate performance of the FeF<sub>3</sub>/C nanocomposites at carbonization temperature of 500 °C for 3h in the voltage range of 1.5–4.5 V; (b) charge/discharge rate performance of the FeF<sub>3</sub>/C nanocomposites at carbonization temperature of 600 °C for 3h in the voltage range of 1.5–4.5 V; (c) charge/discharge rate performance of the FeF<sub>3</sub>/C nanocomposites at carbonization temperature of 700 °C for 5h in the voltage range of 1.5–4.5 V; (d) cycling performance of the FeF<sub>3</sub>/C nanocomposites at carbonization temperature of 700 °C for 5h in the voltage range of 1.5–4.5 V.

**Fig. S6.** (a,b) Low- and high-magnification SEM images of the precursor of Fe<sub>3</sub>O<sub>4</sub>/C-700-5h; (c,d) low- and high-magnification SEM images of FeF<sub>3</sub>/C-700-5h nanocomposites; (e,f) TEM images of FeF<sub>3</sub>/C-700-5h nanocomposites.

**Table S1.** The comparison of discharge capacities and fading rates/cycle of the previously reported  $\text{FeF}_3$  electrodes.

| Electrode                                                | Voltage range (V) | Current density ( $\text{mA g}^{-1}$ ) | Discharge capacity ( $\text{mAh g}^{-1}$ ) / (cycle no.) | Ref.      |
|----------------------------------------------------------|-------------------|----------------------------------------|----------------------------------------------------------|-----------|
| $\text{FeF}_2/\text{RGO}$                                | 1.5- 4.5          | 100                                    | 125/(2 <sup>nd</sup> )- 70/(1000 <sup>th</sup> )         | [1]       |
| $\text{FeF}_3/\text{graphene}$                           | 1.5- 4.2          | 60                                     | 202/(1 <sup>st</sup> )- 167/(50 <sup>th</sup> )          | [2]       |
| $\text{K}_{0.6}\text{FeF}_3/\text{C}$                    | 1.5-4.2           | 19.6 (0.1C)                            | 295/(1 <sup>st</sup> )- 100/(35 <sup>th</sup> )          | [3]       |
| $\text{FeF}_3 \cdot x\text{H}_2\text{O}/\text{graphene}$ | 1.5- 4.5          | ~24 (0.1C)                             | 334/(1 <sup>st</sup> )- 101/(30 <sup>th</sup> )          | [4]       |
| $\text{FeF}_3 \cdot 0.5\text{H}_2\text{O}/\text{RGO}$    | 1.5- 4.5          | 11 (0.05C)                             | 242/(1 <sup>st</sup> )- 230/(100 <sup>th</sup> )         | [5]       |
| $\text{FeF}_3 \cdot 0.5\text{H}_2\text{O}$               | 1.2-4.0           | 22 (0.1C)                              | 135/(2 <sup>nd</sup> )- 98/(50 <sup>th</sup> )           | [6]       |
| $\text{FeF}_3 \cdot 0.33\text{H}_2\text{O}/\text{SWNTs}$ | 1.2- 4.0          | ~23 (0.1C)                             | 130/(1 <sup>st</sup> )- 74/(50 <sup>th</sup> )           | [7]       |
| $\text{FeF}_3 \cdot 0.5\text{H}_2\text{O}/\text{MWNTs}$  | 1.5-4.5           | 22 (0.1C)                              | 108/(1 <sup>st</sup> )- 90/(100 <sup>th</sup> )          | [8]       |
| $\text{FeF}_3/\text{C}$                                  | 1.5- 4.5          | 75                                     | 286/(1 <sup>st</sup> )- 126/(100 <sup>th</sup> )         | This work |
