Fig. S1 Characterization of the Cu-based superhydrophobic hierarchical surfaces. (a) XPS spectra of F 1s. (b) Sliding angle with a water drop of 5 μ L.

Fig. S2 SEM images of Sample NS in different magnifications.

Fig. S3 SEM images of (a) Sample D60, (b) Sample D80, (c) Sample D100 and (d) Sample D120 after 15 abrasion cycles.

Fig. S4 SEM images of Sample W (a) after 100 abrasion cycles, (b) after 60 min of solid particle impacting.

Fig. S5 Adhesive durability of Sample H25. (a) Contact angle and sliding angle as a function of number of tape peeling cycles. (b) SEM images of Sample H25 after 500 tape peeling cycles. (c) EDS mapping analysis of Sample H25 after 500 tape peeling cycles.

Table S1 Literature review of durable superhydrophobic surfaces with their materials, durability test conditions and wettability after durability tests. The durable performances of Sample W are also listed for comparison. Explanations of symbols are as follows. P: pressure, D: abrasion distance, N_A : number of abrasion cycles, Φ : diameter of solid particles, H: release height, V: release rate, T: time of impacting, M: mass of solid particles, N_I : number of solid particle impact cycles, F: adhesion strength of tape, N_P : number of tape peeling cycles.
