**Fig. S1** Schematic diagram showing the basic operating principle of Nano-TA and a representative deflection curve for a PS film (thickness = 340 nm) on a silica surface.

**Fig. S2** Polymer structures and bead center locations chosen for poly( $\alpha$ -methylstyrene) (PAMS).

**Table S1.** Site mole fractions and potential energy parameters<sup>1</sup> for PAMS with  $M_w$  =450 kDa (OPLS force field)

| PAMS                                         | $\epsilon_v / k_B$ (K) | $x_v$  | $\sigma_v$ (nm) |
|----------------------------------------------|------------------------|--------|-----------------|
| $\text{CH}_3$ ( $\text{sp}^3$ ) <sup>2</sup> | 88.1                   | 0.0004 | 0.390           |
| $\text{CH}_2$ ( $\text{sp}^3$ ) <sup>2</sup> | 59.4                   | 0.071  | 0.390           |
| C (aliphatic) <sup>3</sup>                   | 33.2                   | 0.071  | 0.350           |
| C (aromatic) <sup>3</sup>                    | 35.2                   | 0.071  | 0.355           |
| H (aromatic) <sup>3</sup>                    | 17.4                   | 0.357  | 0.242           |
| C (aromatic link) <sup>3</sup>               | 38.3                   | 0.357  | 0.355           |

**Table S2. Site mole fractions and potential energy parameters<sup>4, 5</sup> for PMMA with  $M_w \approx 100$  kDa (OPLS force field)**

| PMMA                                            | $\epsilon_v / k_B$ (K) | $x_v$ | $\sigma_v$ (nm) |
|-------------------------------------------------|------------------------|-------|-----------------|
| CH <sub>3</sub> (sp <sup>3</sup> ) <sup>2</sup> | 88.1                   | 0.143 | 0.390           |
| CH <sub>2</sub> (sp <sup>3</sup> ) <sup>2</sup> | 59.4                   | 0.143 | 0.390           |
| C (sp <sup>3</sup> ) <sup>3</sup>               | 33.2                   | 0.143 | 0.350           |
| C (carbonyl) <sup>3</sup>                       | 52.8                   | 0.143 | 0.375           |
| O (carbonyl) <sup>3</sup>                       | 106                    | 0.143 | 0.296           |
| O (ether) <sup>6</sup>                          | 85.6                   | 0.143 | 0.300           |
| CH <sub>3</sub> (ether) <sup>2</sup>            | 85.6                   | 0.143 | 0.380           |

**Table S3. The structural parameters of Au<sup>7, 8</sup> and silica surfaces,<sup>9</sup> and parameters for the reference system to calculate wetting parameters for PMMA-Au and PAMS-silica systems**

|                              | silica | Au    |
|------------------------------|--------|-------|
| $\rho_s$ (nm <sup>-3</sup> ) | 44.2   | 0.59  |
| $\Delta_s$ (nm)              | 0.220  | 0.288 |
| $\sigma_{ss}$ (nm)           | 0.270  | 0.257 |
| $\epsilon_{ss}/k_B$ (K)      | 230    | 5310  |
| PMMA $\epsilon_{xs}/k_B$ (K) | /      | 607   |
| $\sigma_{xs}$ (nm)           | /      | 0.308 |

|      |                         |       |       |
|------|-------------------------|-------|-------|
| PAMS | $\epsilon_x/k_B$ (K)    | 69.6  |       |
|      | $\sigma_x$ (nm)         | 0.356 |       |
|      | $\alpha_{wx}$           | /     | 0.141 |
|      | $\epsilon_{xs}/k_B$ (K) | 86.3  | /     |
|      | $\sigma_{xs}$ (nm)      | 0.287 | /     |
|      | $\epsilon_x/k_B$ (K)    | 32.1  |       |
|      | $\sigma_x$ (nm)         | 0.304 |       |
|      | $\alpha_{wx}$           | 0.051 | /     |
|      |                         |       |       |
|      |                         |       |       |
