2 after twisting for 200 times for the assembled flexible all-solid-state δ -
3 MnO₂/SWCNT-15 hybrid supercapacitor.

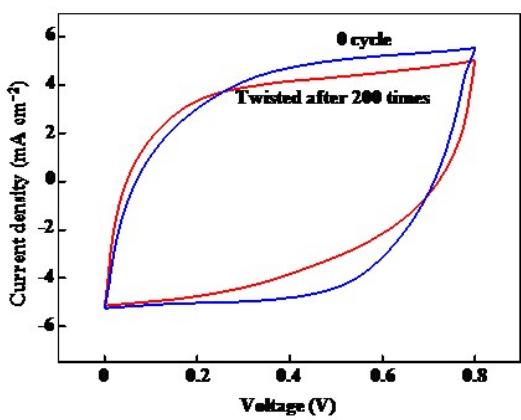

Table S1. The capacitance and rate performance of the carbon nanotube film, $\delta\text{-MnO}_2$ nanofiber film, and $\delta\text{-MnO}_2$ nanofiber/SWCNT hybrid film electrodes with different carbon nanotube amounts.

Electrode materials	$\delta\text{-MnO}_2$ fiber (mL) 2 mg mL⁻¹	SWCNT (mL) 1.6 mg mL⁻¹	Specific capacitance (mF cm ⁻²)	Rate performance (1-10 mA cm ⁻²)
$\delta\text{-MnO}_2/\text{SWCNT-5}$	30	1.875	533	78 %
$\delta\text{-MnO}_2/\text{SWCNT-10}$	30	3.750	906	79 %
$\delta\text{-MnO}_2/\text{SWCNT-15}$	30	5.625	946	81 %
$\delta\text{-MnO}_2/\text{SWCNT-20}$	30	7.500	828	69 %
$\delta\text{-MnO}_2$	0	30.000	462	73 %
SWCNT	30	0.000	266	87 %
