**Fig. S1.** (a) TEM image and (b) HRTEM image of IPCN850. The inset in (b) displays the FFT pattern of IPCN850, demonstrating their amorphous characteristic.

**Fig. S2.** The Raman spectra of (a) IPCN850, IPCN850@dopa, IPCN850@dopa@Fe-TA(3) electrodes and (b) bare glass, glass@dopa, glass@dopa@Fe-TA(6) samples.

**Fig. S3.** FE-SEM images of (a) IPCN850 electrode, (b) IPCN850@dopa electrode, and (c) IPCN850@dopa@Fe-TA(3) electrode. (Scale bars represent 500 nm.)

**Fig. S4.** (a,b) Dark-field TEM images of the IPCN850@dopa@Fe-TA(3). (c-f) TEM-EDX mapping of the IPCN850@dopa@Fe-TA(3). The C, N, O, Fe atoms are homogeneously distributed over the nanosheets. The scale bars represent 100 nm for the panel (a) and 20 nm for the panels (b-f).

**Fig. S5.** (a) The specific gravimetric capacitances at different scan rates (5-500  $mV s^{-1}$ ) of IPCN850 and the polydopamine-coated IPCN850 (IPCN850@dopa) electrodes prepared with different concentrations (2, 4, 8, 12, or 16  $mg mL^{-1}$ ) of dopamine solution. CVs of IPCN850 and IPCN850@dopa electrodes with respect to the various concentrations of dopamine solution at the scan rate of (b) 5  $mV s^{-1}$ , (c) 100  $mV s^{-1}$ , and (d) 500  $mV s^{-1}$ .

**Fig. S6.** Each contribution of IPCN850, polydopamine, and  $\text{Fe}^{3+}$ -tannic acid layers for IPCN850@dopa@Fe-TA(3) electrode to specific gravimetric capacitance at (a) different scan rates (5–500  $\text{mV s}^{-1}$ ) and (b) relatively low scan rates of 5–40  $\text{mV s}^{-1}$ .

**Fig. S7.** Specific capacitances of IPCN850, IPCN850@dopa, IPCN@Fe-TA(3), and IPCN850@dopa@Fe-TA(3) electrodes at different scan rates (5-500 mV s<sup>-1</sup>).

**Table S1.** EIS fitting parameters for IPCN850, IPCN@dopa, and IPCN850@dopa@Fe-TA(3) electrodes.

**Table S3.** Comparison of the specific capacities of the IPCN850, IPCN850@dopa, and IPCN850@dopa@Fe-TA(3) electrodes with other electrode materials.

To investigate the specific capacity of the electrode, we calculated the specific capacity according to the following equation [S6]:

$$W \text{ (mAh g}^{-1}\text{)} = \frac{C_g \times \Delta V \times 1000 \text{ (mAh g}^{-1}\text{)}}{3600}$$

where  $W$  is the specific capacity (mAh g<sup>-1</sup>),  $C_g$  is the gravimetric specific capacitance and  $\Delta V$  is the potential range of discharge.

| Ref.      | Sample                                                        | Specific capacity                                                                                         |
