Contents

1. Figures

Figure S1. Calibration curve of carvacrol and thymol (mobile phase: acetonitrile-water (55:45, v/v); Flow rate: 1.1 mL min⁻¹; KNAUER Smart line HPLC system with 2500 basic model UV detector, column (4.6 mm diameter × 250 mm length, particle size of 5 μm, with a pre-column (Eurospher 100-5 C18)) under ambient temperature (25 °C); λ = 220 nm).

Figure S2. Pareto charts for the effect estimation. The effects presenting probability values higher than 0.05 were not considered as statistically significant.

Figure S3. The conditions of profile optimum by the CCD design for the recovery of thymol and carvacrol.

Figure S4. Typical chromatogram obtained for the extraction of *Thymus daenensis Celak* sample spiked with the two analytes under optimum conditions: (a) non-spiked, (b) spiked with 100 ng mL⁻¹ before DMSPE and (c) extracted from water sample after DMSPE of analytes.

Figure S5. The chromatogram obtained by DMSPE-HPLC-UV for *Salvia officinalis* under optimum conditions: (a) non-spiked, (b) spiked with 100 ng mL^{-1} before DMSPE and (c) extracted from *Salvia officinalis* sample after DMSPE of thymol and carvacrol.

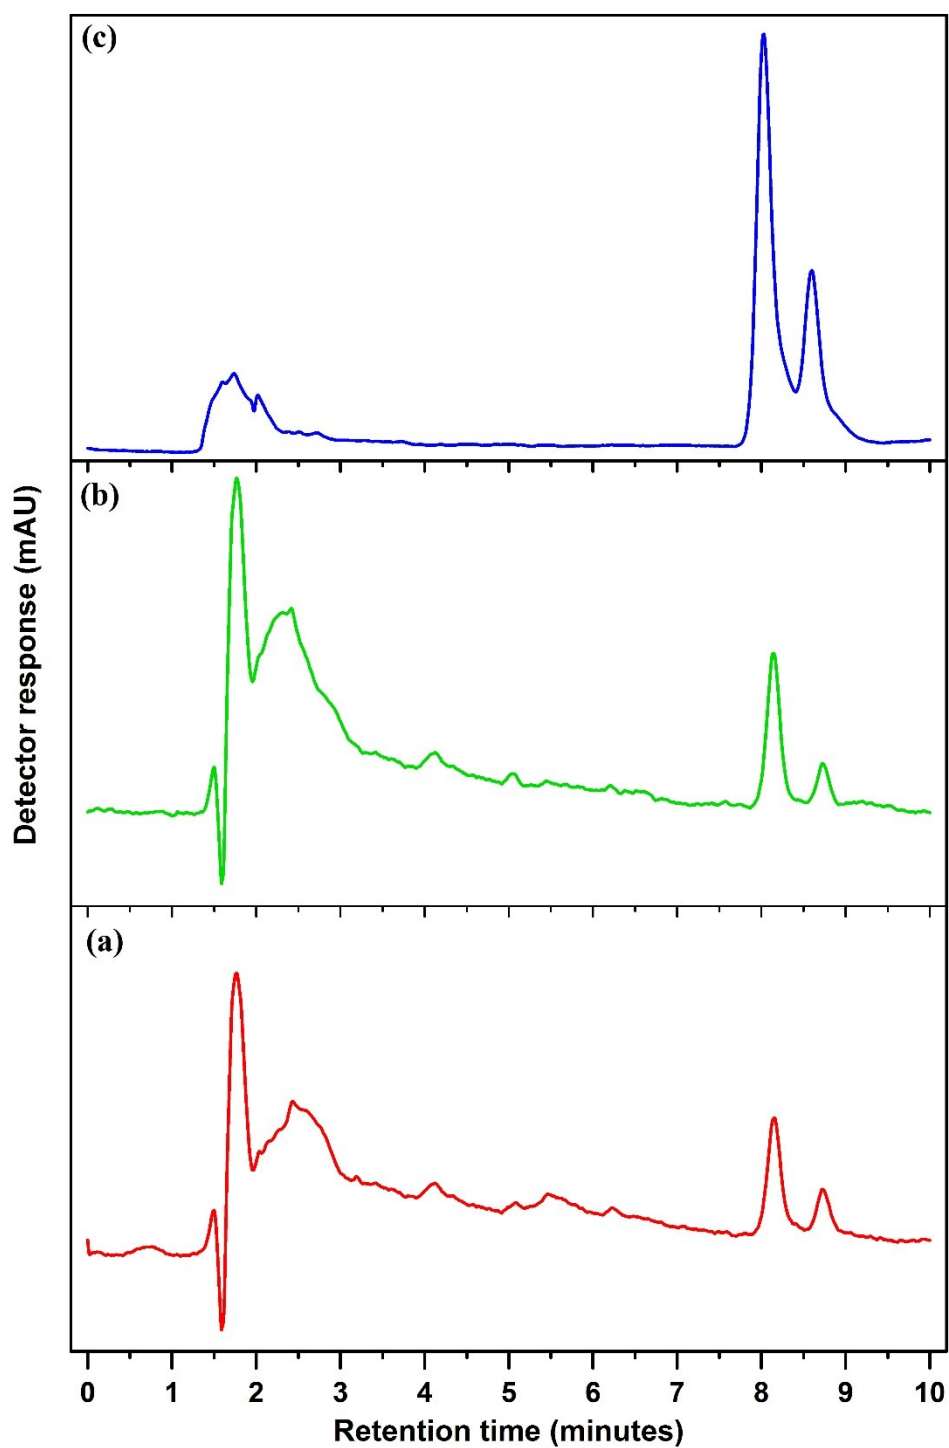

Figure S6. The chromatogram obtained by DMSPE-HPLC-UV for *Satureja khuzestanica* under optimum conditions: (a) non-spiked, (b) spiked with 100 ng mL^{-1} before DMSPE and (c) extracted from *Satureja khuzestanica* sample after DMSPE of analytes.

Figure S7. The chromatogram obtained by DMSPE-HPLC-UV for *Stachys pilifera* under optimum conditions: (a) non-spiked, (b) spiked with 100 ng mL^{-1} before DMSPE and (c) extracted from *Stachys pilifera* sample after DMSPE of thymol and carvacrol.

Figure S8. The chromatogram obtained by DMSPE-HPLC-UV for mentha under optimum conditions. (a) non-spiked, (b) spiked with 100 ng mL^{-1} before DMSPE and (c) extracted from Mentha sample after DMSPE of thymol and carvacrol.

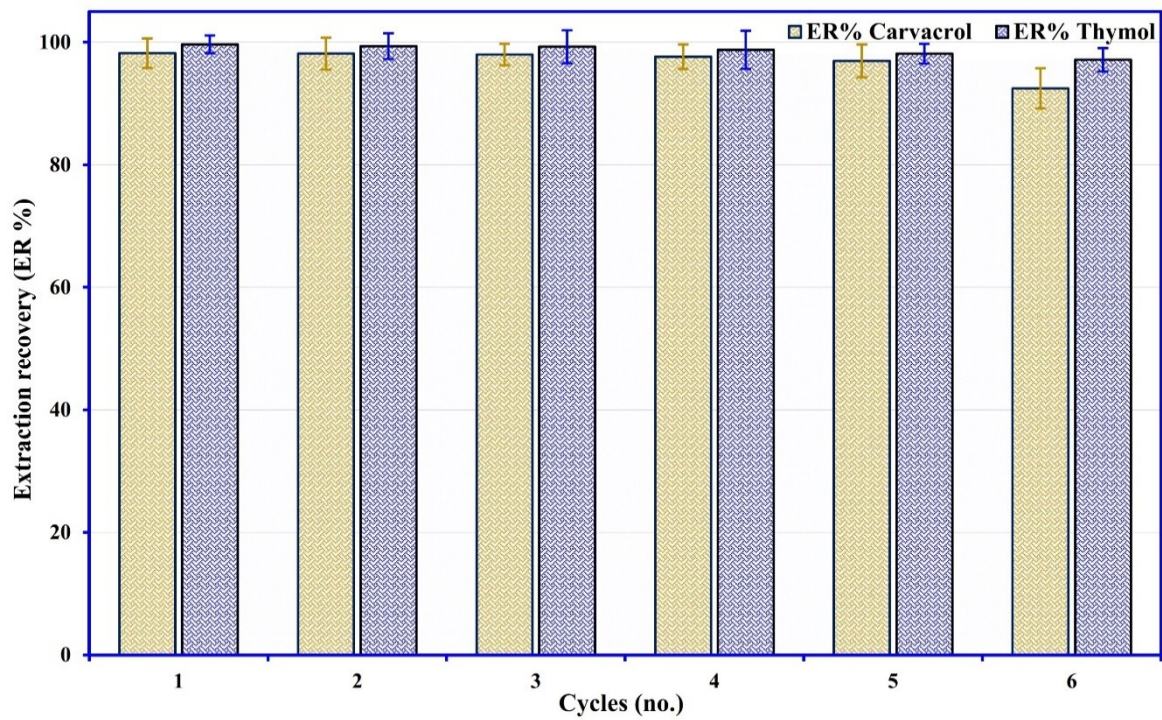

Figure S9. Reusability of nano-sorbent for DMSPE of thymol and carvacrol. The mean of three replicates was used as each extraction efficiency with error bar.

2. Tables

Table S1. CCD design matrix for five variables with the observed values for the recovery of thymol and carvacrol.

| Independent variables | Unit | Levels ($\alpha = 2$) | | | | | |
|---|----------------|-------------------------|----------------|----------------|----------------|-----------|--------|
| | | $-\alpha$ | Low (-1) | Center (0) | High (+1) | $+\alpha$ | |
| (X ₁) pH | - | 2.0 | 3.5 | 5.0 | 6.5 | 8.0 | |

Table S3. Characteristic data of the developed DMSPE-HPLC-UV method for the determination of thymol and carvacrol from methanolic extracts of plants and water samples.

| Quantitative analysis | Values |
|---|-------------|
| Sample volume (mL) | 15.0 |
| extraction solvent (mL) | 0.300 |
| Linear range (ng mL ⁻¹) | 0.4-6000 |
| correlation coefficients (R ²) | 0.985-0.999 |
| Limit of detections (LODs) (ng mL ⁻¹) | 0.054-0.104 |
| Limit of quantification (LOQs) (ng mL ⁻¹) | 0.178-0.345 |
| Enrichment factor (EF) | 100.5-222.8 |
| Preconcentration factor (PF) | 50.0 |
| Reproducibility (RSD, %) | 1.62-7.80 |
| Repeatability (RSD, %) | 1.37-5.20 |
