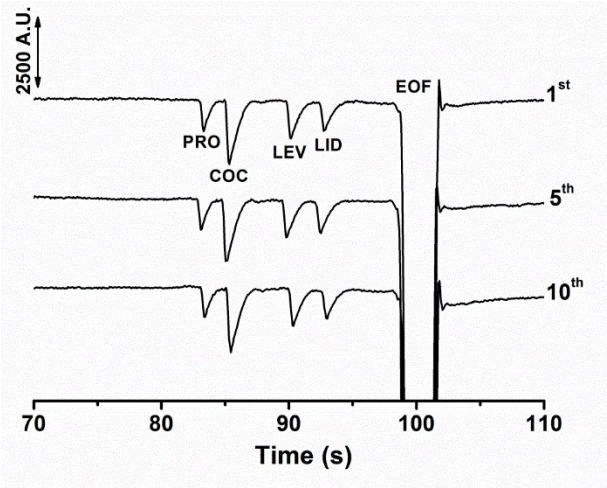

Figure S1. Electropherograms obtained for successive injections (n = 10) of a standard solution containing of PRO, LEV, LID (150 µmol L^{-1}), and COC (300 µmol L^{-1}). Separation voltage (inlet side): +20 kV. Fused-silica capillary (50 µm id) with 10 and 40 cm of effective lengths and total length of 50 cm. Separation voltage (inlet side): +25 kV; hydrodynamic injection: 25 kPa for 1 s; AU: arbitrary units.
