## Supporting Information

- Figure S1. Correlation between N-O bond lengths and bond order.
- Table S1. Adsorption conformers of ONNO on **CAT**.
- Table S2. Activation energies and heat of reactions for O-NNO bond cleavage initiated from 5 conformers.
- Table S3. Temperature dependence of the Gibbs free-energy of activation for O-N<sub>2</sub> bond cleavage
- Table S4. List of calculated models
- Absorption energy of *cis*-ONNO molecule to **CAT**
- Absorption energy of CO to **CAT**
- Cartesian coordinates of the calculated models.

**Figure S1.** Correlation between N-O bond lengths and bond order. Values are given in Table 1.

**Table S1.** Adsorption conformers of ONNO on CAT. Relative energies ( $\Delta E$ ) with respect to  $\text{CAT} + 2(\text{NO})$  and bond lengths are shown for singlet and triplet states.

### Absorption energy of *cis*-ONNO molecule to CAT

We estimated the absorption energy of *cis*-ONNO molecule to **CAT**. It is very difficult to describe the accurate electronic structure of isolated *cis*-ONNO molecule with using DFT because of its multireference character.<sup>[1,2]</sup> Therefore, we used high-level *ab initio* calculation results available for isolated ONNO molecule (NO dimer). The binding energy of isolated NO dimer with respect to two NO monomer was calculated to be 3.46 kcal·mol<sup>-1</sup> by the MRMP2 method for the *cis* conformer,<sup>[2]</sup> and the experimentally estimated binding energy is 2.8–3.8 kcal·mol<sup>-1</sup> (Ref. 2). Using the binding energy of 3.46 kcal·mol<sup>-1</sup>, we obtained the absorption energy of *cis*-ONNO to **CAT** as follows: 13.5 kcal·mol<sup>-1</sup> to Cu<sub>2</sub>O site in the singlet state (**Cnf-1**) and 16.8 kcal·mol<sup>-1</sup> to Cu-Al interfacial site in the singlet state (**Cnf-2**). The adsorption energies of *cis*-ONNO are summarized in Table 1.

### Absorption energy of CO to CAT

The adsorption energy of CO at site A is 4.1 kcal·mol<sup>-1</sup>. Such a very weak binding energy indicates the coordination sphere of the Cu(II) site in **CAT:O** or **CAT:OO** is almost saturated already. The Cu-C distance of Cu-CO in **Cnf-17** is 2.190 Å. This bond distance is significantly longer than the Cu-C distance of non-oxidized **CAT(CO)** (1.846 Å) and is close to the adsorption distance of CO on CuO (110) surface predicted by the DV-X $\alpha$  computation.<sup>[3]</sup> The calculated C-O stretching frequencies are 2223 cm<sup>-1</sup> and 2240 cm<sup>-1</sup> for **CAT:O(CO)** and **CAT:OO(CO)**, respectively; they exhibit a slight blueshift in comparison with that of free CO molecule (2220cm<sup>-1</sup>). These features are similar to those of the second-sphere CO observed in Cu(CO)<sub>n</sub><sup>+</sup> (n > 4) molecules,<sup>[4]</sup> where the first coordination sphere is saturated by four CO ligands.
