

ESI

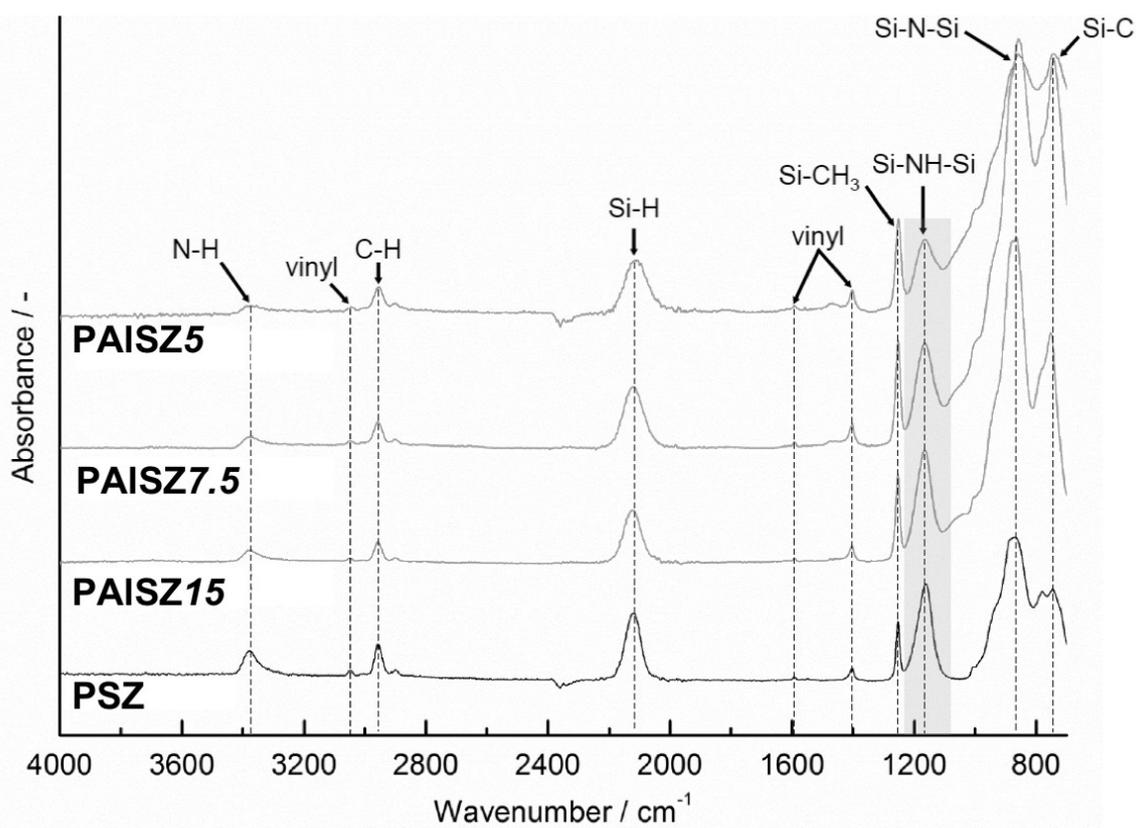

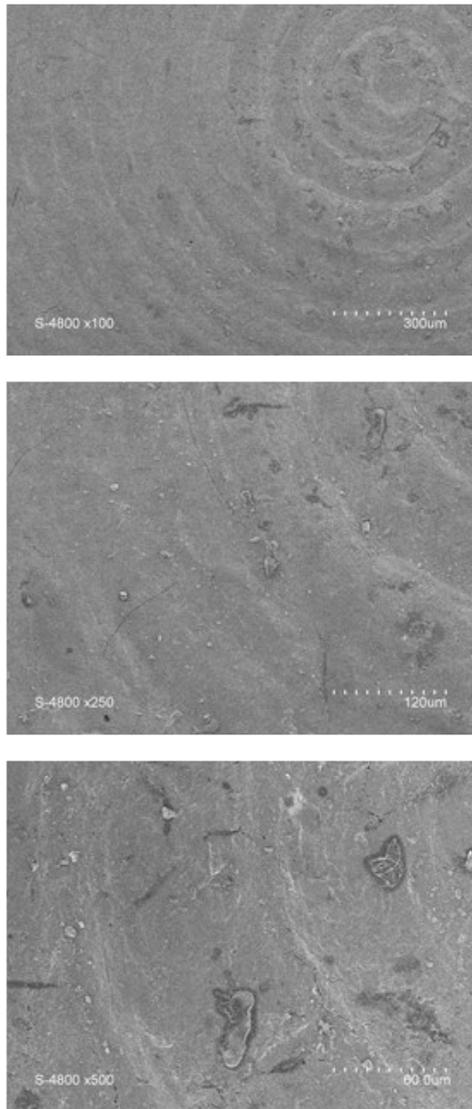

Fig. 1SI. FTIR spectra of PSZ and PAISZX ( $X = 15 \rightarrow 5$ ) samples.

**Table 1S1.** Calculated  $^{27}\text{Al}$  NMR parameters for two crystalline structures and for the models presented in Figure 5.

|  | $\delta_{\text{iso}}$ (ppm) | $C_Q$ (MHz) | $\eta$ |
|--|-----------------------------|-------------|--------|
| <b>Crystalline structures</b>  |                             |             |        |
| <b>Tris(aluminium hydride dimethylamine)-ICSD 290274</b>                     |                             |             |        |
| Al1 ( $\text{AlN}_2\text{H}_2$ )   | 157.8                       | 13.1        | 0.4    |
| Al2 ( $\text{AlN}_2\text{H}_2$ )   | 160.0                       | 12.3        | 0.5    |
| Al3 ( $\text{AlN}_2\text{H}_2$ )   | 159.4                       | 12.0        | 0.5    |
| <b>Tris(dimethylaluminium) hexakis(methylhydrazido)aluminate-ICSD 173483</b> |                             |             |        |
| Al1 ( $\text{AlN}_6$ )   | 27.5                        | 1.0         | 0.7    |
| Al2 ( $\text{AlN}_2\text{C}_2$ )   | 180.1                       | 15.9        | 0.8    |
| Al3 ( $\text{AlN}_2\text{C}_2$ )   | 175.9                       | 13.7        | 1.0    |
| <b>Models</b>  |                             |             |        |
| <b>Model I (coord 3)</b>   |                             |             |        |
| Al1 ( $\text{AlN}_3$ )   | 164.0                       | 30.2        | 0.2    |
| Al2 ( $\text{AlN}_2\text{H}$ )   | 186.3                       | 32.3        | 0.1    |
| Al3 ( $\text{AlNH}_2$ )  | 227.4                       | 37.1        | 0.1    |
| <b>Model II (coord 4)</b>  |                             |             |        |
| Al1 ( $\text{AlN}_3\text{H}$ )   | 133.6                       | 14.6        | 0.0    |
| Al2 ( $\text{AlN}_3\text{C}$ )   | 131.9                       | 13.9        | 1.0    |
| <b>Model III (coord 4)</b>   |                             |             |        |
| Al1 ( $\text{AlN}_4$ )   | 119.7                       | 16.8        | 0.1    |
| <b>Model IV (coord 5)</b>  |                             |             |        |
| Al1 ( $\text{AlN}_4\text{C}$ )   | 85.8                        | 4.3         | 0.8    |
| Al2 ( $\text{AlN}_5$ )   | 67.8                        | 4.4         | 0.6    |
| <b>Model V (coord 6)</b>   |                             |             |        |
| Al1 ( $\text{AlN}_4\text{C}_2$ )   | 67.5                        | 9.9         | 0.3    |
| <b>Model VI (coord 6)</b>  |                             |             |        |
| Al1 ( $\text{AlN}_5\text{C}$ )   | 53.8                        | 12.9        | 0.3    |

**Fig. 2SI.** SEM images of ceramics prepared at 1000 °C and derived from the **PAISZ3.75** sample warm-pressed at 80 °C
