

ELECTRONIC SUPPLEMENTARY INFORMATION

ZnTa-TUD-1 as easily prepared, highly efficient catalyst for the selective conversion of ethanol to 1,3-butadiene

G. Pomalaza, G. Vofo, M. Capron and F. Dumeignil

Univ. Lille, CNRS, Centrale Lille, ENSCL, Univ. Artois, UMR 8181 - UCCS - Unité de Catalyse et Chimie du Solide, F-59000 Lille, France.

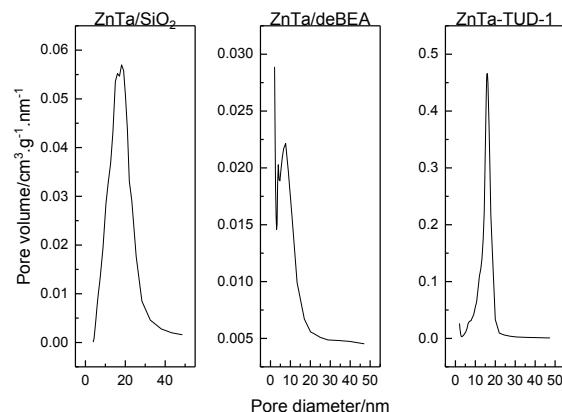

Figure S1 Pore size distribution of synthesized samples

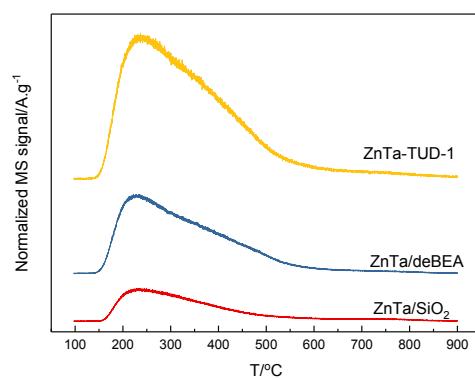

Figure S2 Normalized NH₃-TPD profiles for ZnTa-TUD-1, ZnTa/deBEA and ZnTa/SiO₂

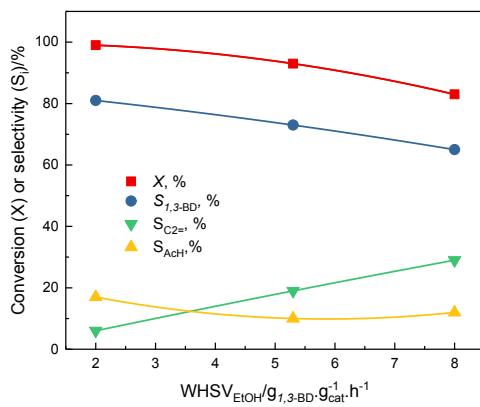

Figure S3 Effect of $WHSV_{EtOH}$ on the catalytic performances of ZnTa-TUD-1 (T: 400 °C, TOS: 5 h, P: 1 atm).

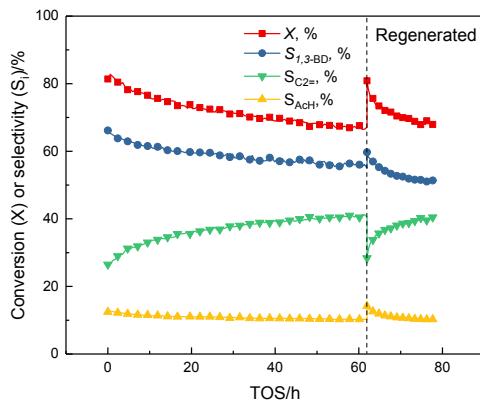

Figure S4 Activity of ZnTa-TUD-1 over time with regeneration after 60 hours (T: 400 °C, $WHSV_{EtOH}$: 8 h⁻¹, P: 1 atm)

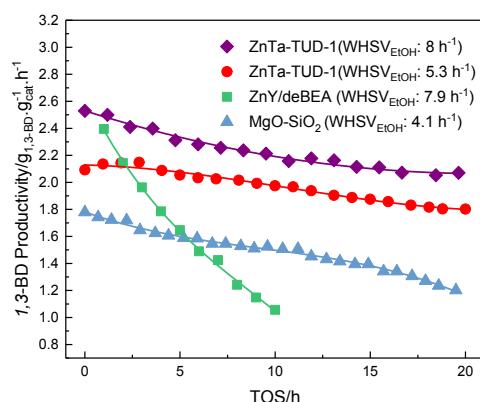

Figure S5 Comparison between the productivity of ZnTa-TUD-1 and the two most productive catalysts of the literature-hierarchical MgO-SiO₂ from Men *et al.* and ZnY/deBEA from Li *et al.*^{1,2}

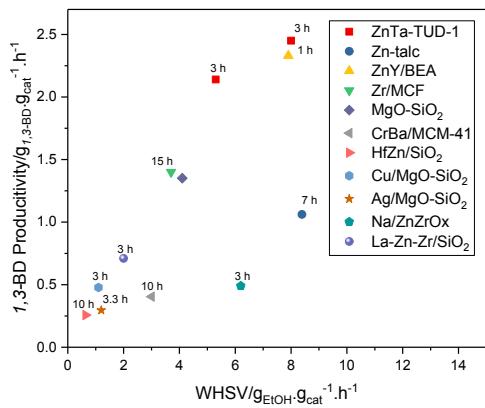

Figure S6 1,3-BD productivity of the top catalysts found in the literature, include the TOS at which each were recorded.³
