

Supplement Table 1. Comparison of clinical primary sputum specimens processed from Akonni's Automated TruTip Workstation and analyzed on the Lab-on-a-Film disposable with Sanger Sequencing, DST, and Smear status. WT: wild type, S: Susceptible to INH and RIF. * First run was discordant. Repeat (shown) was concordant. † First run was indeterminate. Repeat (shown) was concordant. **Contaminated with bacteria other than MTB.
