A summary of crystallographic data of 2a, 3a and 3d

Table S1 A collection of crystallographic data for **2a**, **3a** and **3d**. The single-crystals suitable for X-ray diffraction were obtained from solution of ethyl acetate and hexane (V:V=1:4). The structures were solved by direct methods and refined by full matrix least squares on F² using the SHELX-97 program. All non-hydrogen atoms were refined anisotropically. The hydrogen atoms, located by Fourier difference synthesis, were refined isotropically and were then normalized to the average neutron diffraction values.

Parameters	2a	3a	3d
Empirical Formula	C ₃₇ H ₄₂ N ₂ O ₁₁	C ₃₇ H ₄₄ N ₂ O ₁₁	C ₄₄ H ₅₀ N ₂ O ₈

Conformational Searching of **1a**

Conformers of **1a** produced by rotation of C₁-C₂ (C_{1'}-C_{2'}) and C₃-C₄ (C_{3'}-C_{4'}) were considered in this searching. In this way, 36 initial conformers were generated by the gentor tool, a module of the molclus program,¹ which were subjected to pre-optimize by the semi-empirical PM7 method inserted in the MOPAC2016 program.² After removing duplicated conformers using the default energy (0.25 kcal/mol) and geometry threshold (0.1 Å) for distinguishing different structures set in the isostat tool, a module of the molclus program as well, 23 conformers were remained, which were then optimized at the B3LYP/6-31G(d) level.³⁻⁵ Finally, 21 rotamers were located and their structures associating with relative energies (kcal/mol) were presented in **Fig.S13**.

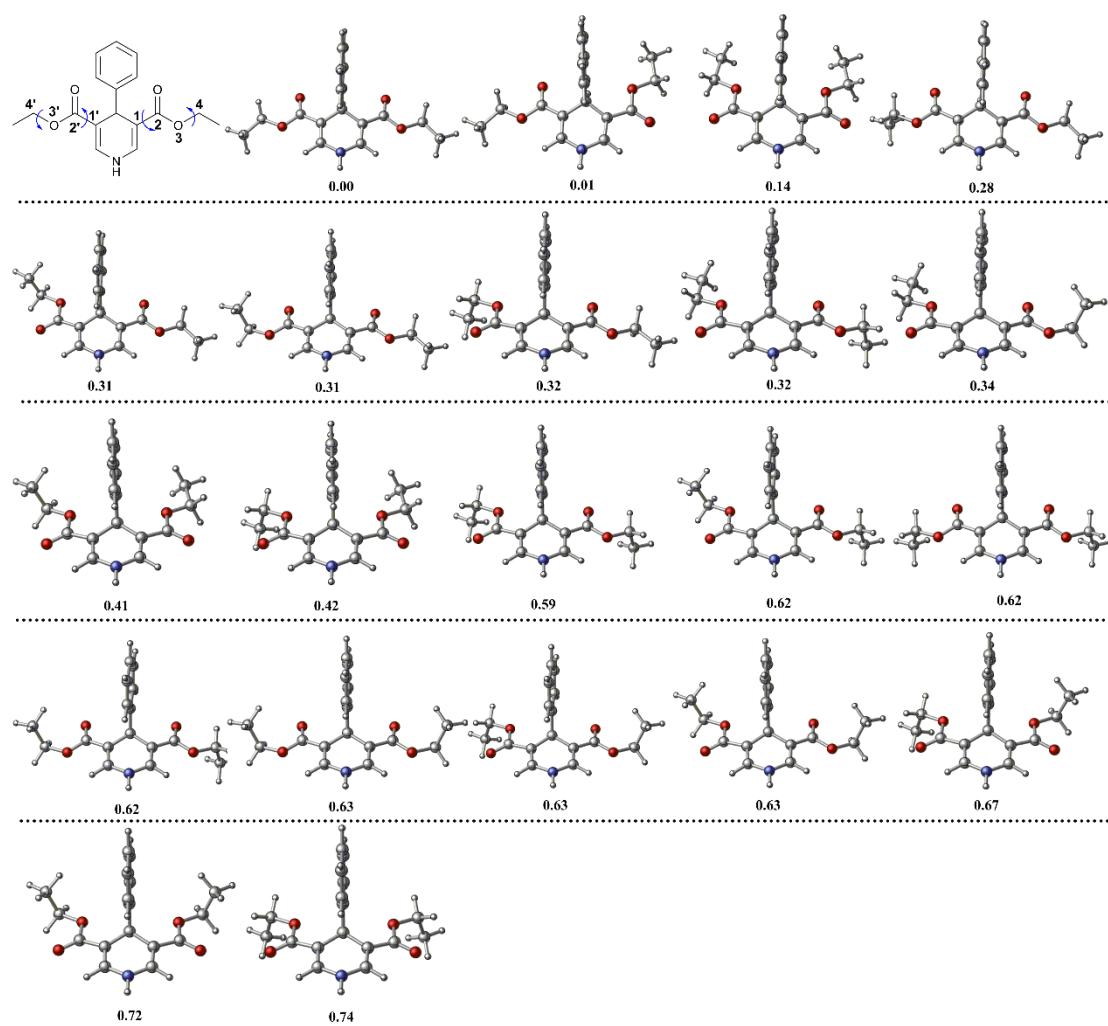

Figure S13 Rotamers of **1a** and their relative energy (kcal/mol).

Locating the MECP of **1a***, **IM1-4** and **IM42-2**

Location of MECP was performed via Gaussian 09 together with sobMECP program, which is a modified version of Harvey's MECP program. The location of MECP between singlet excited state (S1) and triplet state (T1) of **1e** was carried out at the B3LYP/6-31G* theoretical level, while location of other MECPs was carried out at the M062X/de2-SV theoretical level. All triplet states were calculated using an unrestricted formalism. The default thresholds were used in these calculations. Initial input Cartesian coordinates used to locate the MECP were presented at the end of this file. The resulting curves of relative energies against optimized steps were presented in **Figure S14**, along with the presence of absolute energy values (*E_{abs}, Hartree*).

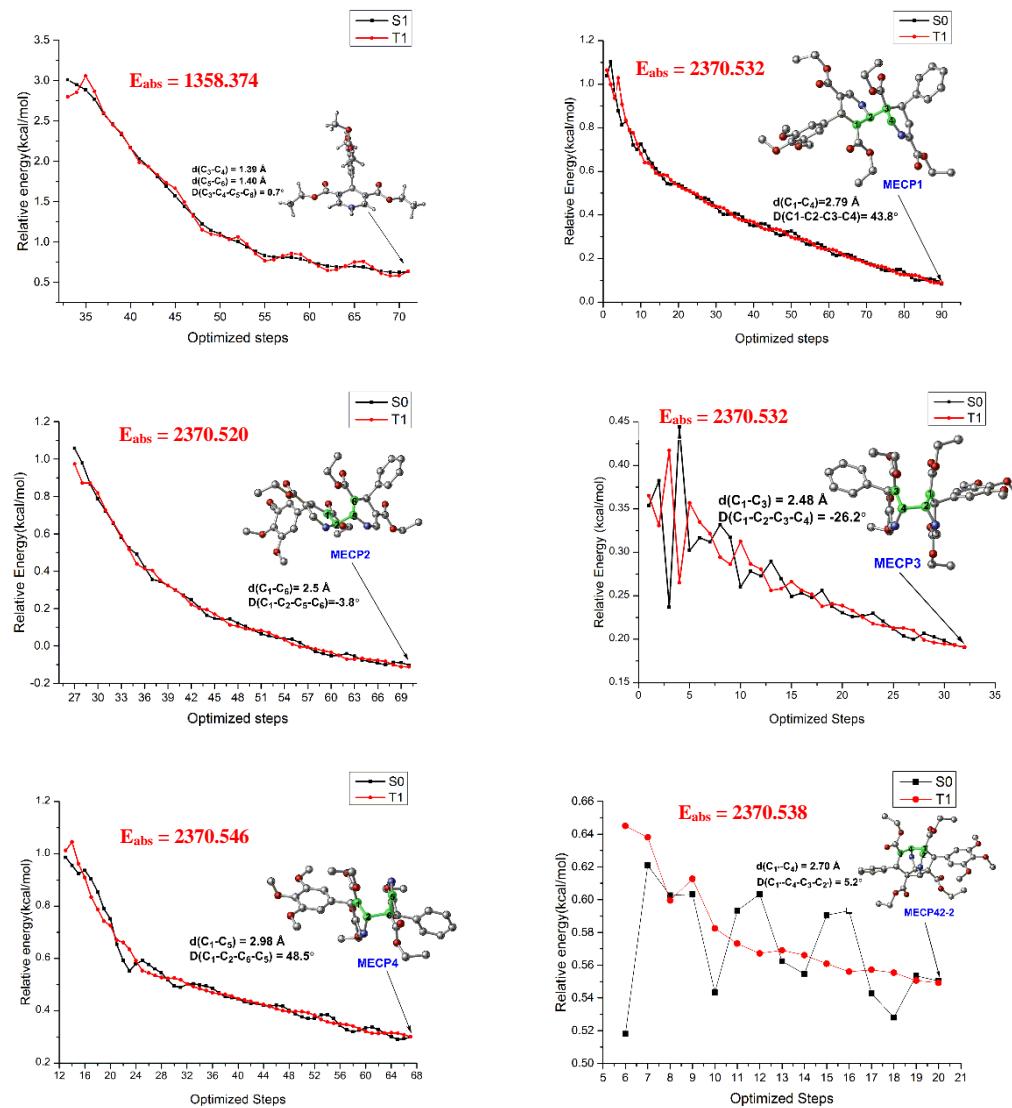

Figure S14 MECP locating curves for **1a***, **IM1-4** and **IM42-2** and the selected absolute energy values used to calculated relative energies.

Relaxed-scanning of ring closure step in every pathways
