

Supporting Information

Free-Standing Nanostructured Vanadium Pentoxide Films for Metal-Ion Batteries

Achim M. Diem, Andrea Knöller, Zaklina Burghard, and Joachim Bill

Table S1. V_2O_5 nanofiber length determined from AFM scans in dependence of the dispersion growth time.

V_2O_5 nanofibers	$\text{V}_2\text{O}_5\text{-}1$	$\text{V}_2\text{O}_5\text{-}2$	$\text{V}_2\text{O}_5\text{-}3$	$\text{V}_2\text{O}_5\text{-}4$
Growth time (d)	3	14	28	42
Length (μm)	$0.54 + 0.47$	$1.13 + 0.46$	$1.30 + 0.64$	$1.95 + 0.51$

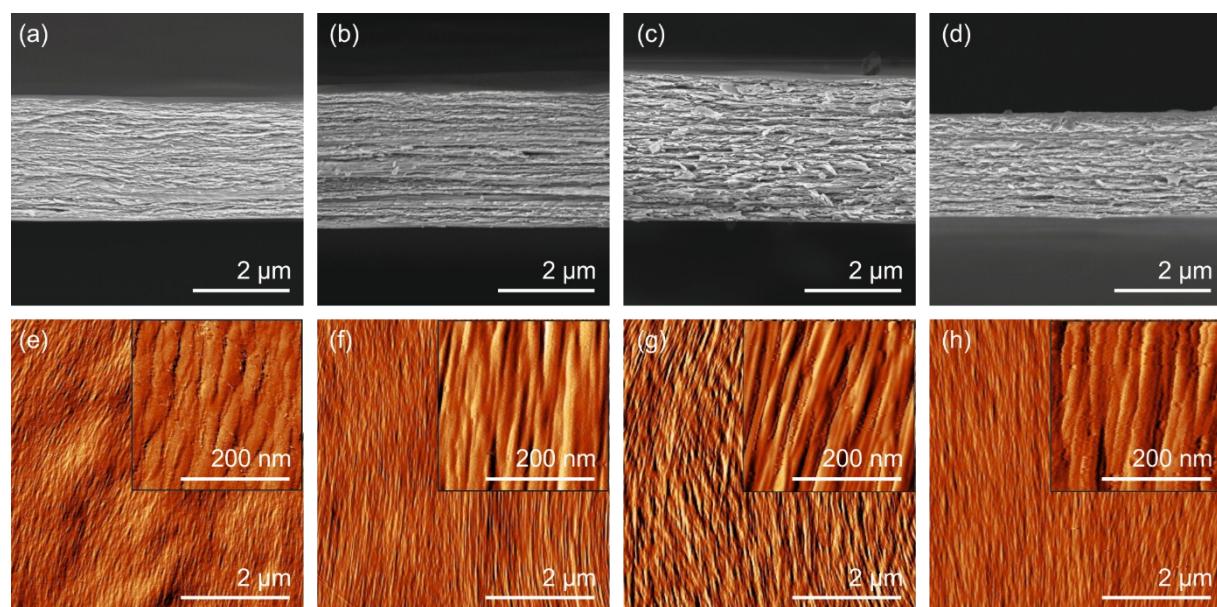

Figure S1. (a)-(d) SEM cross-section images of paper's fracture surface for (a) $\text{V}_2\text{O}_5\text{-}1/\text{PT}$, (b) $\text{V}_2\text{O}_5\text{-}2/\text{PT}$, (c) $\text{V}_2\text{O}_5\text{-}3/\text{PT}$ and (d) $\text{V}_2\text{O}_5\text{-}4/\text{PT}$. (e)-(h) AFM amplitude images with an inset of higher magnification of the paper's surface for (e) $\text{V}_2\text{O}_5\text{-}1/\text{PT}$, (f) $\text{V}_2\text{O}_5\text{-}2/\text{PT}$, (g) $\text{V}_2\text{O}_5\text{-}3/\text{PT}$ and (h) $\text{V}_2\text{O}_5\text{-}4/\text{PT}$.

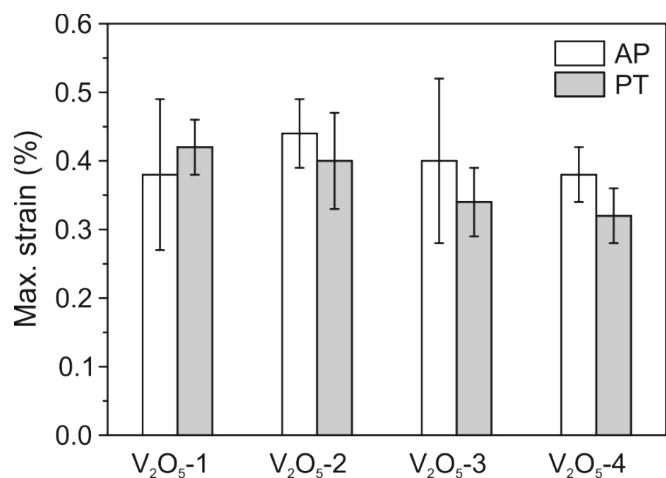

Figure S2. Determined maximum strain for AP and PT samples obtained from nanotensile tests.
