

Figure S1. SEM images of bare CVD-Graphene Foam.

Figure S2. a,b) SEM images of CVD-GF with different loading amount of FeOOH. c) SEM of the Fe<sub>2</sub>O<sub>3</sub>-GF composite formed after thermal annealing; d) SEM image of FeOOH-EGO-FeOOH-GF, after electrochemical deposition of FeOOH on EGO-FeOOH-GF.

Figure S3. UV-Vis absorption of PDI-F after 7 days' exposure to different GF samples, for surface area measurement.

Figure S4. a) XPS spectrum of Fe 2p and O 1s observed in  $\text{FeOOH-GF}$  and  $\text{Fe}_2\text{O}_3\text{-GF}$  composites; b) XPS C 1s peak of pristine EGO and after thermal annealing at  $400^\circ\text{C}$  (RGO); c) XRD patterns of the of  $\text{FeOOH-GF}$  and  $\text{Fe}_2\text{O}_3\text{-GF}$  composites.

Figure S5. EDS elemental mapping images of the  $\text{Fe}_2\text{O}_3$ -GF composites.

Figure S6. EDS elemental mapping images of the RGO-Fe<sub>2</sub>O<sub>3</sub>-GF composites.

Figure S7. SEM images of GF after compression before testing in batteries: a) bare GF, b)  $\text{Fe}_2\text{O}_3$ -GF, c) RGO- $\text{Fe}_2\text{O}_3$ -GF, d)  $(\text{RGO-Fe}_2\text{O}_3)_2$ -GF, e)  $(\text{RGO-Fe}_2\text{O}_3)_3$ -GF; f) cross-section part of the multiple layer  $\text{Fe}_2\text{O}_3$  coating on  $(\text{RGO-Fe}_2\text{O}_3)_3$ -GF surface (also shown in main text).

Figure S8. Charge-discharge voltage profiles of a) GF, b) RGO-Fe<sub>2</sub>O<sub>3</sub>-GF and c) (RGO-Fe<sub>2</sub>O<sub>3</sub>)<sub>2</sub>-GF electrodes at 0.2 C

Figure S9. a) Rate capability of the  $\text{Fe}_2\text{O}_3$  and RGO- $\text{Fe}_2\text{O}_3$  based GF composites as anode materials in lithium ion batteries at different discharge and charge rates; Coulombic efficiency of the electrodes b) during the initial 25 cycles at various C rate, c) during the long-term cycles at 2 C, and d) after long-term 1000 cycles at various C rate.

Figure S10. a,b) SEM images of uncoated Fe<sub>2</sub>O<sub>3</sub>-GF electrodes after 1000 charge/discharge cycles, showing major removal of the Fe<sub>2</sub>O<sub>3</sub> layer. c,d) SEM of the RGO-Fe<sub>2</sub>O<sub>3</sub>-GF composites after 1000 charge/discharge cycles, showing that the nano-wall structure is maintained .

Figure S11. Nyquist impedance plots of the as-assembled bare GF,  $\text{Fe}_2\text{O}_3$  and RGO- $\text{Fe}_2\text{O}_3$  coated GF composites a) before and b) after cycles, the shown EIS were recorded at the open circuit potential; c) Equivalent circuit for the EIS of these electrodes.

Table S1. UV absorption data of GF related composites.

| SAMPLE                                                 | Absorbance @ 527 (nm) | Concentration (mol/L) | Molecules adsorbed (N <sup>o</sup> /g) | Surface Area (m <sup>2</sup> /g) |
|--------------------------------------------------------|-----------------------|-----------------------|----------------------------------------|----------------------------------|
| PDI-F original                                         | 0.1373                | 1.73E-06              |                                        |                                  |
| GF                                                     | 0.1292                | 1.63E-06              | 1.12E+18                               | 2.34                             |
| Fe <sub>2</sub> O <sub>3</sub> -GF                     | 0.1140                | 1.43E-06              | 2.71E+18                               | 5.70                             |
| RGO-Fe <sub>2</sub> O <sub>3</sub> -GF                 | 0.1076                | 1.35E-06              | 3.46E+18                               | 7.27                             |
| (RGO-Fe <sub>2</sub> O <sub>3</sub> ) <sub>2</sub> -GF | 0.0858                | 1.08E-06              | 5.20E+18                               | 10.92                            |
| (RGO-Fe <sub>2</sub> O <sub>3</sub> ) <sub>3</sub> -GF | 0.0789                | 9.93E-07              | 5.53E+18                               | 11.61                            |

Table S2. Mass contribution of the entire electrodes and the components

| Sample                                                 | Mass of electrode (mg) | Mass of Fe <sub>2</sub> O <sub>3</sub> (mg) | Mass of RGO (mg) | Mass of GF (mg) |
|--------------------------------------------------------|------------------------|---------------------------------------------|------------------|-----------------|
| GF                                                     | 1.10                   | 0                                           | 0.00             | 1.10            |
| Fe <sub>2</sub> O <sub>3</sub> -GF                     | 1.37                   | 0.18                                        | 0.00             | 1.19            |
| RGO-Fe <sub>2</sub> O <sub>3</sub> -GF                 | 1.38                   | 0.18                                        | 0.05             | 1.15            |
| (RGO-Fe <sub>2</sub> O <sub>3</sub> ) <sub>2</sub> -GF | 1.59                   | 0.39                                        | 0.10             | 1.10            |
| (RGO-Fe <sub>2</sub> O <sub>3</sub> ) <sub>3</sub> -GF | 1.98                   | 0.69                                        | 0.15             | 1.15            |

Table S3. Correspondences of the C-rates and the applied current densities

| C-rate* | Current densities ( $\mu\text{A cm}^{-2}$ ) |                             |                                  |                                     |                                     |
|---------|---------------------------------------------|-----------------------------|----------------------------------|-------------------------------------|-------------------------------------|
|         | GF                                          | $\text{Fe}_2\text{O}_3$ -GF | RGO- $\text{Fe}_2\text{O}_3$ -GF | $(\text{RGO-Fe}_2\text{O}_3)_2$ -GF | $(\text{RGO-Fe}_2\text{O}_3)_2$ -GF |
| 0.2 C   | 55                                          | 83                          | 83                               | 105                                 | 144                                 |
