Terahertz Spectroscopy Data

Absorption coefficient and refractive index spectra of all materials between 0.3 – 2.8 THz, in the temperature range of 90 – 360 K, with 10 K temperature increments between spectra. The absorption coefficient spectra include the upper limit of detectable absorption which is indicated by the black dashed line. Both the absorption spectra and the refractive index spectra are ordered from highest to lowest temperatures, with red lines indicating the high temperatures and blue lines indicating the low temperatures.
