## Characterization of Pd nanoparticles with the use of TEM and EDS

**Figure S43.** Statistical analysis of the Pd-containing NPs formed in the reaction of **9** with iodobenzene. Histograms of particle diameter distribution (red) and corresponding normal distribution curves (blue). Average particle sizes and standard deviations are given under each graph.

**Figure S44.** EDX spectrum of TEM grid containing particles obtained from **9-SIPr** complex. Spectrum was scaled and smoothed for more clear presentation of low-intensity signals.

**Figure S45.** EDX spectrum of TEM grid containing particles obtained from **9-PIPPr** complex. Spectrum was scaled and smoothed for more clear presentation of low-intensity signals.

**Figure S46.** EDX spectrum of TEM grid containing particles obtained from **9-DIPr** complex. Spectrum was scaled and smoothed for more clear presentation of low-intensity signals.

**Comment:** Assignment of the signals in EDX spectra

Element(s)	Source
C, O	Carbon support on TEM grid
Cu, O, Sn	TEM grid, specimen holder
Al, O	Specimen holder
Si	Silicon drift detector (EDX spectrometer)
<b>Pd, I</b>	<b>Particles:</b> metallic Pd, PdI (or azolium salt for I)
